Dear Rhodri,

Following our telephone conversation last week together with the submission of window samples, I am writing a few key points which may be of use.

1. We would like to follow your suggestion of using grey as a colour for the aluminium windows. The finish will also be matt and will complement the existing building.
2. As the samples show, the aluminium profile is significantly thinner than uPVC. Also the aluminium profile would be thinner than a wooden option. In this way, the character of the building will be preserved and not detracted from.
3. Environmentally, aluminium windows will last significantly longer than wooden ones. Given the massive environmental issues that are facing the world, I hope this aspect can be considered.
4. As per your e-mail of 5/8/19, you mentioned that "appropriately designed aluminium windows may be a more acceptable option". I hope that this is still the case, as the aluminium product appears to be a very good solution.

Thank you for your help,
Kind regards,
