APPENDIX A

Limitations and Exceptions

GROUND INVESTIGATION LIMITED

Limitations and Exceptions

1. The Client has requested that a combined geotechnical and geo-environmental site assessment be performed in order to identify land quality issues at the site and their potential impacts on the proposed development.
2. The work was conducted and this report has been prepared for the sole internal use and reliance of the Client. This report shall not be relied upon or transferred to any other parties without the express written authorisation of Ground Investigation Limited. If an unauthorised third party comes into possession of this report the authors owe them no duty of care and skill.
3. The findings and opinions conveyed in this report are, in part, based on information obtained from third party sources as detailed within the text, and which Ground Investigation Limited believes are reliable. Nevertheless, Ground Investigation Limited cannot, and does not, guarantee the authenticity or reliability of the information it has relied upon.
4. This report presents the findings and opinions of experienced geotechnical consultants. Ground Investigation Limited does not provide legal advice and the advice of lawyers may also be required.
5. The opinions presented in this report are based on the findings of a review and assessment of the information described in this report. It is possible that the research and investigations carried out by Ground Investigation Limited, while fully appropriate, has failed to indicate the existence of important information sources. Assuming such sources actually exist, their information could not have been considered in the formulation of the opinions expressed in this report.
6. The fieldworks were undertaken on the date(s) indicated within the text of this report. The Client is advised that the conditions observed by Ground Investigation Limited are subject to change and that not finding indicators of hazardous substances or conditions, does not mean that they do not exist at the site. Certain indicators of the presence of hazardous substances or conditions may have been latent at the time of the fieldworks and may subsequently have become observable.
7. The work carried out for the assessment can only investigate a small portion of the subsurface conditions. Certain strata or conditions may have been outside the limited portion of the subsurface investigated, latent at the time of the work or only partially intercepted by the works, and thus their full significance could not be appreciated. In this regard, groundwater levels are particularly susceptible to variation. Accordingly, it is possible that the investigation failed to identify the presence or significance of strata or conditions. Assuming such strata or conditions exist, their presence could not have been considered in the formulation of the report's findings and opinions.
8. Ground Investigation Limited believes that providing information about the limitations is essential to help the Client identify and therefore manage its risks. The risks can be mitigated, but not eliminated, through additional research/investigation. Ground Investigation Limited will, on request, advise the Client of additional research/investigation opportunities, their impact on risk and their cost.

Glamorganshire**Published 1884****Source map scale - 1:10,560**

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10K Raster Mapping**Published 1999****Source map scale - 1:10,000**

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.
