

SUPPORTING INFORMATION – Rec 21-4-21-

Please find attached the existing site survey. As you will see it identifies a small section of existing wall to the south of the site and a long strip of existing concrete foundation along almost the entire length of the remaining riverbank. The section of concrete as you will see from the plan and the photos attached to the CMS is approximately 1 m wide and is the foundation of the original wall.

The proposed development does not seek to extend the wall beyond the original wall/concrete foundation, nor does it propose to extend the wall and its original location at the northern end of the site.

If it would assist, I am happy to meet on site to discuss further with either the LPA or NRW.
