

Ecological Enhancement

6 Hen Felin, Gellinudd SA8 3HN

The proposal is to provide a steel portal frame outbuilding to provide plant storage and a field shelter for a smallholding. The area around the site is ideal for ecological sustainment. But in the interest of enhancement, it would be beneficial in ecological terms to support the habitat of such creatures by adding support features to the building scheme.

It is proposed that 1 number classic RSPB type nesting box be installed at high level on the east facing gable end of the proposal. Also, 1 number Kent type bat box on the north facing elevation.

RSPB Classic Next Box

Simply styled, sturdily made FSC ® certified timber nest box. Like all our nest boxes, it's made with thick timber for insulation with a roof designed to prevent rain water running down the inside of the box. The 32mm entrance hole, makes it suitable for many bird species.

Kent Bat Box

Based on the proven and popular Kent bat box design, but with an additional weatherproof outer shell.

Ideal for crevice roosting species such as common and soprano pipistrelles.

- 100% recycled plastic shell protects the wood creating a much longer lasting box.
- Wooden interior made from FSC Certified spruce, rough-sawn to provide good grip for the bats; sustainably grown less than 10 miles from our workshop.
- Self-cleaning, maintenance free box
