THE REPLACEMENT TREE

Discussion has taken place between the Applicant and the Authority in relation to a replacement tree and it has been suggested by the authorities arborist that an appropriate replacement tree would be a native Alder. The Applicant has agreed to this.

With regard to its size, it is stated that the tree should be of a standard size i.e. it should have an 8 - 10 cm stem circumference and be one metre above ground level. Enquiries have been made by the Applicant of various Nurseries and an appropriate replacement tree has been found with the dimensions specified - see attached particulars.

Discussion has also taken place between Mr Nick Thomas, the Authority's arborist, and Mr John Blake of JPB Tree Services and it has been agreed that the replacement tree will be planted some 6 metres from the position of the existing tree - which is to be felled. Please see attached plan. The new position is mid-way between the Applicant's property, 13 Rhiwlas, and the existing Oak tree. This will enable the replacement tree to have more room to grow and flourish and would be a safer distance from the Applicant's property in the interests of health and safety.
