**Information on Limitations of Visualisations:**

Visualisations of wind farms have a number of limitations which you should be aware of when using them to form a judgement on a wind farm proposal. These include:

- A visualisation can never show exactly what the wind farm will look like in reality due to factors such as: different lighting, weather and seasonal conditions which vary through time and the resolution of the image;
- The images provided give a reasonable impression of the scale of the turbines and the distances to the turbines, but can never be 100% accurate;
- A static image cannot convey turbine movement, or flicker or reflection from the sun on the turbine blades as they move;
- The viewpoints illustrated are representative of views in the area, but cannot represent visibility at all locations;
- To form the best impression of the impacts of the wind farm proposals these images are best viewed at the viewpoint location shown;
- The images must be printed at the right size to be viewed properly (260mm by 820mm);
- You should hold the images flat at a comfortable arm's length. If viewing these images on a wall or board at an exhibition, you should stand at arm's length from the image presented.
- The ZTV presented here takes no account of the screening effect of vegetation or buildings.

- Additional Notes:
- Notes:
1. This figure has been based on the following parameters:
    - Rotor diameter: 133m • Height to blade tip: 149.9m
  2. Direction given as bearing relative to Grid North (BNG).
  3. The number of turbine blades and hubs theoretically visible assumes bare earth scenario, vegetation screening not accounted for.

**Zone of Theoretical Visibility:**

- 1 Turbine
- 2 Turbines
- 3 Turbines
- 4 Turbines
- 5 Turbines
- Melin Court 5 WTG Locations
