Hi Matthew
Thank you for your update.

I can confirm I am willing to provide the information required.

- 1) Earlier today I contacted Welsh Water and applied for the waste water maps. They have not indicated how long they will take to get them to me, but as soon as I hear from them I will let you know.
- 2) The second part of their concerns covers "Given the presence of the biomass activity we need know if the operation produces cooling water from heat exchangers, boiler blowdown or condensate and if so, how is that disposed of" I can confirm our system is a closed system and there is no cooling water from the heat exchangers, boiler blowdown or condensate.

Regards Tony
