

Biodiversity enhancement measures

1 no. external bird nesting box will be attached to a tree within the north east facing tree line located adjacent to the adventure playground. The bird box will be positioned to face north east in order to avoid strong sunlight and the wettest wind.

The bird box will be of a size and design suitable for use by House Sparrow. It will be sited prior to first use of the play equipment at a minimum of 2m, but maximum of 4m, above ground level.

House Sparrow box was chosen for biodiversity enhancement since in parts of the UK, numbers in towns and cities have declined by 60 per cent. Because of these large population declines, the house sparrow is now red-listed as a species of high conservation concern.

Please see below details of where the bird box will be located:
