

Glantawe Riverside Park Swift Tower

Tree Survey

There are trees within the park which must be considered, and the tower is located away from trees to avoid harm and also to perform its function as a swift nesting site (swifts require clear flight-lines to and from their nest sites). The tower location is proposed in an open field and the nearest trees are 6.25m from the development site.

The accountable officer for NPTC with regards to trees was consulted with regards to the trees and has advised that the development will not impact on the trees and no further survey is required.
