

Dear Sir / Madam

RE : Planning Application at Unit 11 Edwards works (P2023/0554)

With regarding to your communication on 9 October 2023 regarding the planning application for Tankertech for a prefabricated building to be added to your works site.

I would like to confirm that there will be no increase of work that we will be completing on our site that would affect the nearby surroundings. There will be no increase of vehicles attending the site that would cause a rise in emissions.

We will not be increasing our staff levels they will remain the same as they have for the last 5 years. We currently have 7 employees that work from that site, and this is going to remain the same.

The building is only required for us to enable our current staff to complete the work on the vehicles in a dry environment as it has become more difficult for them when there is adverse weather conditions during the winter and more frequently the last few years during the summer and spring.

We feel it is in the employees benefits to be able to work in a dry environment and not out working in the elements.

CERI DAWES.
