

Superseded

GREEN INFRASTRUCTURE STATEMENT

INTRODUCTION

The proposal is to amend the previously approved application which included the provision of a number of ramps to get from the current school level to the grassed play area where a new demountable classroom structure is being positioned and provided.

To retain play area for the children we have replaced the ramps with a new set of steps and a platform lift (to facilitate for any potential disabled access requirement).

ECOLOGICAL IMPACT

The existing ground is formed of a tarmac ramp to an adjacent play area, the ecology is therefore limited and largely unaffected.

There are no trees or hedges or shrubs affected that might provide sustenance or shelter for birds or animals.

CONCLUSION

The proposed alteration to the previously approved works do not have any ecological impact on the existing green infrastructure.
