1 INTRODUCTION

1.1 Terms of Reference

1.1.1 TEC has been appointed by Linc Cymru Housing Association to prepare a desk study for the former Dyffryn Lower Comprehensive School, Devonshire Place, Port Talbot. All works were undertaken in accordance with our proposal letter dated 28 March 2022 and referenced RE.2203011.001.

1.2 Background

1.2.1 The site currently comprises the former Dyffryn Lower Comprehensive School, located on Devonshire Place, south-east of Port Talbot (Figure 1). The site covers an area of approximately 0.74 hectares with the centre of the site situated at National Grid Reference 277060, 189470. The nearest postcode is SA13 1SG.

1.2.2 The proposed development is understood to comprise the demolition of the existing structures onsite and the construction of several 2No. storey residential dwellings across the majority of the site with 3No. storey apartments located to the east (Figure 2). The development is to comprises areas of hardstanding including access roads and car parking, with areas of soft landscaping consisting of private areas and public open space.

1.2.3 The aim of these works is to provide desk study-based information on land contamination risk and the anticipated ground engineering conditions and constraints associated with the site with regard to the proposed development.

1.3 Scope of Works

1.3.1 The scope of work undertaken as part of this report is presented below:

- **Preliminary Risk Assessment:** this phase of assessment involves development of an initial site conceptual model, based on desk study research and a site reconnaissance survey, in order to establish whether or not there are potentially unacceptable risks.
- **Preliminary Geotechnical Assessment:** general recommendations regarding likely engineering abnormalities are provided on the basis of desk study research and a site reconnaissance survey.

1.3.2 The above scope of work has been undertaken in accordance with current guidance such as LCRM - *Land contamination: risk management* (Environment Agency, 2020), BS10175+A2 (2017) and NHBC/ LABC.

2 PRELIMINARY RISK ASSESSMENT

2.1 Introduction

2.1.1 Information for this preliminary risk assessment (PRA) has been obtained from a site reconnaissance survey and a review of an Envirocheck® report obtained for the site (Appendix B and Appendix C) together with published available information where relevant.

2.2 Site Setting

2.2.1 A site reconnaissance survey was undertaken on 19 May 2022. A summary of the observations is presented in Table 2.1. Photographs taken during the site reconnaissance survey are presented in Appendix A.

Table 2.1: Site Details

Feature	Description
Current Site Use	The site currently comprises 3No. main structures as well as several small structures associated the former Dyffryn Lower Comprehensive School. Partial basements were observed within 2No. of the structures, located along the eastern boundary (Talcennau Road) and western boundary (Broad Street). Noted to be offsite, an electrical sub-station is recorded within the south-eastern corner.
Site Context	The site is located with a predominantly residential area.
Site Boundary Features	North Residential properties along York Place
	East Residential properties along Talcennau Road
	South Residential properties along Devonshire Place
	West Central Junior School along Broad Street
Site Topography	The site was noted to slope down from north-east to south-west. Available OS mapping indicates that the north-eastern corner of the site is situated at ~13mAOD (Above Ordnance Datum) to ~10mAOD within the south-western corner of the site.
Hard and Soft Landscaping	The site is entirely lain to hardstanding comprising tarmacadam.
Trees	A number of mature trees are recorded along the southern and eastern boundary of the site.
Fuel, Hazardous Chemicals and Waste Materials Storage	No evidence of ASTs or USTs were recorded onsite during the site reconnaissance. No evidence of the storage of waste materials or hazardous chemicals were reported onsite.
Asbestos Containing Materials	No potential ACM was observed on the site's ground surface during the site reconnaissance.
Site Drainage	Several surface water drains and manholes were observed across the site. No areas of standing water were observed during the site reconnaissance.
Evidence of Potential Contamination	No visual or olfactory evidence of gross contamination was observed on the site surface during the reconnaissance.
Ground Stability Hazards	No visual evidence of ground subsidence or ground movement was observed.
General	No internal access to the existing structures were obtained during the reconnaissance.

2.3 Site History

2.3.1 Details of the history of the site and surrounding area, relevant to this preliminary risk assessment, have been obtained through the review of historical Ordnance Survey (OS) mapping. A summary of potentially significant features is recorded in Table 2.2, which should be read in conjunction with the full map extracts contained within Appendix B.

Table 2.2: Historical Features Summary

On Site Features			OS Dates
Earliest available mapping depicts the site as forming part of several open fields			1876 – 1899
Construction of 2No. structures, along the eastern and western boundary (similar to current layout) were depicted on mapping from 1917, with the site depicted as 'Schools'. Addition of a third structure along the northern boundary is shown on 1939 mapping, with the site later depicted as 'Dyffryn Comprehensive (Lower) School' from 1967 and as per the current layout.			1917 – 2022
Surrounding Features	Distance	Direction	OS Dates
Port Talbot railway station and associated tracks, by 1917, tracks expanded and included works, tanks, goods yard, engine sheds, substation.	~220m	West	1896 – 2022
Ffrwd Wylt (river)	~420m	South-east	1896 – 2022
Docks	~330m	South-east	1896 – 1951
Old quarry	~190m ~245m	North-east South-east	1896 – 1900 1899
Taibach Tin Plate Works <i>later structures associated with Port Talbot Steel Works (including tanks and goods yard)</i>	~190m	South	1899 – 2022
Port Talbot Saw Mill	~250m	North	1899 - 1917
Port Talbot Steel Works with tanks	>290m	West	1917 - 2022
Garages	~50m	South	1950 - 2022
	~60m	South	1950 - 2022
	~95m	West	1968 - 1988
	~65m	West	1969 - 1988
	~100m	West	1974 - 1988
Electrical sub-station	Adjacent	South	1991 - 2022

2.4

Geology

2.4.1

A summary of available geological information for the area is provided in Table 2.3.

Table 2.3: Geological Setting

BGS Geological Mapping (Ref. Solid and Drift 1:50,000 map – Swansea, Sheet 247)

Geological Unit	Thickness	BGS Description
Made Ground	Unknown	Not recorded on geological mapping but may be present on site
Northern Area - Glaciofluvial Ice Contact Deposits Southern Area - Alluvial fan deposits	Unknown	Sand and gravel
Solid Geology: South Wales Middle Coal Measures Formation	Up to 240m	Grey, (productive) coal-bearing mudstones / siltstones, with seatearths and minor sandstones

BGS Recorded Features

Several fault lines are recorded within proximity to the site, including the Morfa Fault, orientated north-west to south-east, fault line recorded west to east and a fault line recorded north-east to south-west.

BGS Borehole Records

BGS Reference	Distance/ Direction	Depth (mbgl)	Recorded Strata
SS78NE245	~610m north-west	0.0 – 0.23	Made ground
		0.23 – 1.05	Firm brown sandy silt
		1.05 – 4.65	Dense becoming very dense gravel and sand

BGS Estimated Soil Chemistry	
Element	Estimated Concentration
Arsenic	35 - 45 mg/kg
Cadmium	<1.8 mg/kg
Chromium	60 - 90 mg/kg
Lead	<100 mg/kg
Nickel	30 - 45 mg/kg
Radon	
Radon Potential	Radon Protection Requirement
Lower Probability Radon Area (less than 1% of homes are estimated to be at or above the Action Level)	None reported to be required

2.5

Hydrogeology

2.5.1

The Envirocheck® report and Environment Agency information records the following hydrogeological setting of the site.

Table 2.4: Hydrogeological Setting

Aquifer Status			
Geological Unit	Groundwater Vulnerability/ Aquifer Designation	Environment Agency Aquifer Classification	Potential Hydraulic Gradient Direction
Superficial Deposits and Bedrock Geology:	High Vulnerability/ Secondary A Aquifer	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers.	South-westerly (following local topography)
Source Protection Zones			
None recorded within 1km			
Groundwater Abstractions			
None recorded within 1km			
Discharge Consents to Groundwater			
3No. recorded within 1km			
Receiving Water	Effluent Type	Distance from Site	Direction from Site
Soakaway (consent expired)	Unspecified	~305m	South-west
To Land (consent expired)		~475m	South-west
		~880m	East
BGS Groundwater Flooding Susceptibility			
On site - Potential for groundwater flooding to occur at the surface			

2.6

Hydrology

2.6.1

The hydrological setting of the site is summarised in Table 2.5:

Table 2.5: Hydrological Setting

Nearest Surface Water Features		
Feature	River Quality (GQA Grade)	Distance/ Direction from Site
Ffrwd Wyltt	A (at ~690m south)	~420m south-east
Afan	A	~590m north

Surface Water Abstractions		
1No. recorded within 500m		
Details	Abstraction Use	Distance/ Direction from Site
Port Talbot Dock at Margam moors	Construction: dust suppression	~480m south
Licensed Discharge Consents		
2No recorded within 500m		
Receiving Water	Effluent Type	Distance/ Direction from Site
River Ffrwdywyllt (tidal)	Unspecified	~435m south
Ffrwd Wyllt	Sewage discharges – stw storm overflow/storm tank (Water company)	~435m east
Pollution Incidents		
7No. recorded within 500m		
Receiving Water	Pollutant/ Incident	Distance/ Direction from Site
Not given (River Afan)	Creosote from vandalism – category 3 minor incident	~265m west
Not given (maritime pond leakage)	Crude sewage – accidental spillage/ leakage – category 3 minor incident	~310m west
Not given	Sewage – septic tank effluent runoff – category 3 minor incident	~330m west
Not given (Port Talbot Dock)	Oils – diesel – inadequate design/capacity – category 3 – minor incident	~455m west; and 2No. at ~460m west
Not given	Mud/clay/silt – leakage – category 2 significant incident	~460m west
Flooding from Rivers or Seas		
On Site Designation	Off Site Areas of Flooding	
Flood Zone 1	~60m west: Extent of flooding and extreme flooding from rivers or seas without defences	

2.7

Environmental Data

2.7.1

Additional relevant environmental data from the Envirocheck® report for the site is summarised in Table 2.6.

Table 2.6: Additional Environmental Data Summary

Landfill Sites		
None recorded within 1km		
Potentially Infilled Land (Water)		
4No. Recorded within 500m		
Type	Distance/ Direction from Site	Date on Mapping
Unknown filled ground (pond, marsh, river, stream, dock etc)	~205m west; ~310m west; ~350m west; and ~495m south	1900 1965 1900 1921
Potentially Infilled Land (Non-Water)		
2No. Recorded within 500m		
Type	Distance/ Direction from Site	Date on Mapping
Unknown filled ground (pit, quarry etc)	~205m north-east; and ~250 north-east	1993 1993

Commercial/ Industrial Land Use (Active Contemporary Trade Directories)		
Multiple land uses identified within 500m		
Classification	No. within 500m	Distance/ Direction from Site
Cleaners / laundry services	3	~100m south; ~165m south; and ~185m south-east
Garage services / car dealers	9	~225m north-west ~255m south; ~365m north-west; ~370m north-west; ~385m north; ~395m west; ~440m south-west; ~450m north-west; and ~460m south-west
Engineers	3	~310m south-west; ~440m south-west; and ~490m south-west
Manufacturers (industrial)	1	~310m south-west
Sales, servicing and repairs	2	~445m west; and ~490m south-west
Hazardous Substances (Authorisations, Consents, Incidents)		
5No. recorded within 250m		
Category	Details	Distance/ Direction from Site
Integrated Pollution Controls (IPC)	Iron and steel processes (revoked/suspended)	4No. records at ~210m north-west
Integrated Pollution Prevention and Control (IPPC)	Other mineral activities - processing with the release of particles (suspended)	~210m north-west
Local Authority Pollution Prevention and Controls	PG1/4 petrol filling station	~195m west
Prosecutions Relating to Authorised Processes and Controlled Waters	Burring waste on land without a WML (Cramic Way)	~365m west
Substantiated Pollution Incident Register	Atmospheric pollutants and effects: smoke	~440m west
Sensitive Land Uses		
None recorded within 1km		

2.8

Engineering Considerations

2.8.1

Engineering considerations identified from the Envirocheck® report for the site are summarised in Table 2.7:

Table 2.7: Engineering Considerations

Ground Stability Hazards						
Hazard	Hazard Potential					
	No Hazard	Negligible	Very Low	Low	Moderate	High
Collapsible ground			X			
Compressible ground	X					
Ground dissolution	X					
Landslide			X			
Running sand			X			
Shrink/swell clays	X					
Coal mining	X					
Non-coal mining	X					

BGS Recorded Mineral Sites			
15No. recorded within 1km			
Site Name	Type/Commodity	Status	Distance/ Direction from Site
Gwar-Y-caeau	Opencast - Sandstone (Llynfi Member)	Ceased	~205m north
Pen-Y-Cae Quarries	Opencast – Sandstone (Rhondda Member)	Ceased	~570m north-east; ~595m north-east ~670m north-east; ~735m north-east; ~745m north; and ~780m north-east
Tir Caradoc	Opencast - Sandstone (Llynfi Member)	Ceased	~740m east
Dyffryn	Underground – Coal (Deep) (Llynfi Member)	Ceased	~760m east
Pont-Y-Moch Quarry	Opencast - Sandstone (Rhondda Member)	Ceased	~795m north-east; and ~860m north-east;
Celindre Quarries	Opencast – Sandstone (Rhondda Member)	Ceased	~960m north
Duffryn Junction	Opencast – Sandstone (Llynfi Member)	Ceased	~965m east
Port Talbot Steel Slag Aggregates	Steel works – blast furnace slag (ground granulated blast furnace slag)	Active	~970m south-west
Craig Barbara Quarries	Opencast – Sandstone (Llynfi Member)	Ceased	~990m east

2.9 Coal Mining

2.9.1 The Envirocheck® report indicates that a Coal Authority report is recommended for the site. The site reported to be underlain by the South Wales Middle Coal Measures Formation and a review of available Coal Authority mapping indicates the site is situated within a Coal Mining Reporting Area.

2.10 Regulatory Consultations

2.10.1 Regulatory consultations were undertaken with the relevant departments at Neath Port Talbot Council with respect to possible environmental issues and ground conditions on-site and in the surrounding area. At the time of issue, no response had been received. Any pertinent information received in due course will be forwarded under separate cover.

2.11 Outline Conceptual Model

2.11.1 In accordance with the Environment Agency Land contamination: risk management guidance, potential source-pathway-receptor pollutant linkages identified from the desk study phase are summarised in the following sections.

2.12 Potential Sources

2.12.1 Potential sources of contamination identified on and within the vicinity of the site are summarised below:

On Site Sources

- Made ground of unknown chemical composition

Off Site Sources

- Potentially contaminative current and historical land uses have been identified within proximity of the site including the including nearby garage, areas potentially infilled land, electricity sub-station and the nearby Port Talbot Steel Works.

2.13 Potential Receptor Pathways

2.13.1 Potential receptors identified as part of this preliminary risk assessment are:

- Current/future site users;
- Construction workers;
- Controlled waters (Secondary A Aquifer); and
- Proposed development/ structures.

2.14 Potential Pathways

2.14.1 Potential contaminant pathways relating to the identified receptors and contaminants of concern include:

- Dermal contact – contact with soil, dust or water;
- Ingestion - ingestion of soil, dust or water;
- Inhalation – inhalation of soil, dust or vapours;
- Vertical migration – e.g. seepage of contaminants at the ground surface (i.e. leakage/spillage of hydrocarbons) through cracks in hardstanding and/or leaching of contaminants within the unsaturated zone resulting in vertical contaminant migration; and
- Horizontal migration – e.g. lateral migration of contaminants within the saturated zone and along preferential pathways such as drainage pipe bedding.

2.15 Hazard Assessment and Risk Estimation

2.15.1 Potential pollutant linkages identified as part of this preliminary risk assessment are summarised in the Outline Site Conceptual Model presented in Table 2.8. References to risk estimations are made in accordance with the methodology presented in CIRIA publication C552 (2001) titled '*Contaminated Land Risk Assessment: A Guide to Good Practice*' and summarised in Appendix D.

Table 2.8: Outline Conceptual Model

Potential Hazard/ Source	Potential Receptor	Potential Pathway to Receptors	Potential Consequence of Source-Receptor Linkage	Potential Likelihood for Significant Source-Receptor Linkage	Risk Classification
Made ground on site	Current and future site users and construction workers	Exposure to potential contaminants through ingestion, inhalation and dermal contact.	Medium	Low Likelihood to Likely: Given the development history recorded on site, and observations made during the site reconnaissance, the presence of made ground of unknown thickness and chemical composition, or shallow contaminants on site cannot be discounted at this stage.	Low to Moderate Risk
	Controlled waters (Secondary Aquifers)	Leaching of potential contaminants from made ground and vertical and lateral migration through the saturated zone to controlled waters.	Medium	Low Likelihood: Given the potential presence of made ground of unknown chemical composition and the recorded aquifer status of the underlying strata (Secondary A Aquifer), a potential risk to controlled waters, whilst likely to be low, cannot be fully discounted. Notwithstanding this, the presence of hardstanding across the majority of the proposed development area may limit the potential for infiltration and subsequent contaminant migration.	Low Risk
	Current and future site users, construction workers and proposed development	Migration, ingress and accumulation of ground gasses.	Severe	Low Likelihood: Made ground, if present, may act as a potential source of ground gas, subject to thickness and chemical composition.	Low to Moderate Risk
Current and historic potentially contaminative land uses/industrial processes – off-site	Current and future site users, construction workers, controlled waters and proposed development.	Potential on-site contaminant / ground gas migration	Severe	Unlikely to Low Likelihood: Potentially contaminative current and historic processes have been identified in proximity to the site. Therefore, the potential for migration of contaminants/ground gas from off-site sources cannot be fully discounted at this stage.	Low to Moderate Risk
Historic coal mining activities – off site	Current and future site users, construction workers, controlled waters and proposed development.	Potential on-site contaminant / ground gas migration	Medium to Severe	Unlikely to Low Likelihood: The site is situated within a Coal Authority Coal Mining Reporting Area and therefore, the potential for onsite contamination and ground gas migration from off-site sources cannot be discounted at this stage.	Low to Moderate Risk

3 PRELIMINARY GROUND ENGINEERING

3.1 Proposed Development

- 3.1.1 The proposed development is understood to comprise the demolition of the existing structures onsite and the construction of several 2No. storey residential dwellings across the majority of the site with 3No. storey apartments located to the east. The development is to comprises areas of hardstanding including access roads and car parking, with areas of soft landscaping consisting of private areas and public open space.

3.2 Potential Geotechnical Hazards

- 3.2.1 The published geological mapping indicates the site is underlain the superficial deposits (Glaciofluvial ice contact deposits and alluvial fan deposits), reported to comprise sand and gravel. This, in turn, is underlain by the South Wales Middle Coal Measure Formation, described by the BGS as 'grey, (productive) coal-bearing mudstones / siltstones, with seatearths and minor sandstones'.
- 3.2.2 The site is reported to be located within an area with very low hazard potential for collapsible ground, landslides and running sands and no hazard potential for compressible ground, ground dissolution, shrink and swell or running sands on site.
- 3.2.3 The Envirocheck® report indicates that a Coal Authority report is recommended for the site. The site is underlain by the South Wales Middle Coal Measures Formation and a review of available Coal Authority mapping indicates the site is situated within a Coal Mining Reporting Area.
- 3.2.4 Site observations of the existing buildings on site indicated the presence of a partial basements which will need to be considered in relation to any foundation recommendations for the site.

3.3 Preliminary Geotechnical Recommendations

- 3.3.1 Based on the recorded geology of the site, it is anticipated that conventional strip foundations may be appropriate for the 2No. storey low rise residential structures proposed within the northern, western, and central area. For the 3No. storey apartment's structure location within the southern area of the site, the use of conventional foundation may not be considered appropriate, and consideration to a pile foundation option may be more suitable. It would be recommended a ground investigation is undertaken to confirm this.

4 RECOMMENDED FURTHER WORKS

4.1.1 Based upon our current conceptual understanding of the site and the proposed end use, the main potential contaminant linkages identified are considered to be as follows;

- Human Health (current and future site users and construction workers) – exposure to contaminants associated with made ground and potentially contaminative current and historic land uses in proximity of the site through the ingestion, inhalation and dermal contact pathways;
- Controlled Waters – risk to controlled waters from on-site contaminants of potential concern (CoPC) and subsequent migration to identified groundwater/surface water receptors; and
- Human Health (future site users and proposed development) – migration, ingress and inhalation of bulk ground gas that may be associated with made ground and former coal mining activities in the area

4.2 Geoenvironmental Risk Management

4.2.1 Based upon our current conceptual understanding of the site and the proposed sensitive residential site, additional works would be recommended to confirm this and to fully define the geoenvironmental issues associated with the site in relation to the proposed development.

4.3 Geotechnical Risk Management Recommendations

4.3.1 Given the scale of the proposed development and the potential presence of localised made ground, a suitable geotechnical investigation is recommended to confirm the engineering conditions and constraints associated with the site.

Glamorganshire

Published 1917

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Glamorganshire

Published 1884 - 1885

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Glamorganshire

Published 1938 - 1952

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

Published 1949

Source map scale - 1:10,560

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Appendix D

Risk Methodologies and Evaluation

Risk Evaluation

The qualitative assessment methodology presented in CIRIA publication C552 (2001) titled '*Contaminated Land Risk Assessment: A Guide to Good Practice*' has been used by TEC for the basis of evaluating potential risk.

The method requires an assessment of the:

- magnitude of the probability or likelihood of the risk occurring (Table 1); and
- magnitude of the potential consequence or severity of the risk occurring (Table 2)

Table 1. Classification of Probability

Classification	Definition
High likelihood	There is a pollution linkage and an event that either appears very likely in the short-term and almost inevitable over the long-term, or there is evidence at the receptor of harm or pollution.
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short-term and likely over the long-term.
Low likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such an event would take place, and is less likely in the short-term.
Unlikely	There is a pollution linkage but circumstances are such that it is improbable that an event would occur even in the very long-term.

Table 2. Classification of Consequence

Classification	Definition	Examples
Severe	Short-term (acute) risk to human health likely to result in "significant harm" as defined by the Environment Protection Act 1990, Part IIA. Short-term risk of pollution of sensitive water resource. (Note: Water Resources Act contains no scope for considering significance of pollution). Catastrophic damage to buildings/property. A short-term risk to a particular ecosystem, or organisation forming part of such ecosystem (note: the definitions of ecological systems within the draft circular on Contaminated Land, DETR, 2000).	High concentrations of cyanide on the surface of an informal recreation area. Major spillage of contaminants from site into controlled water. Explosion, causing building collapse (can also equate to a short-term human health risk if buildings are occupied).
Medium	Chronic damage to human health ("significant harm" as defined in DETR, 2000). Pollution of sensitive water resources. (Note: Water Resources Act contains no scope for considering significance of pollution). A significant change in a particular ecosystem, or organism forming part of such ecosystem, (note: the definitions of ecological systems within draft circular on Contaminated Land, DETR, 2000).	Concentration of a contaminant from site exceeding the generic or site-specific assessment criteria. Leaching of contaminants from a site to a major or minor aquifer. Death of a species within a designated nature reserve.
Mild	Pollution of non-sensitive water resources. Significant damage to crops, buildings, structures and services ("significant harm" as defined in the draft circular on Contaminated Land, DETR, 2000). Damage to sensitive buildings/structures/services or the environment.	Pollution of non-classified groundwater. Damage to building rendering it unsafe to occupy (for example foundation damage resulting in instability).
Minor	Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve. Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc), easily repairable effects of damage to buildings, structures and services.	The presence of contaminants at such concentrations that protective equipment is required during site works. The loss of plants in a landscaping scheme. Discolouration of concrete.

The combination of the two factors is determined using Table 3 and the resulting level of risk is described in Table 4. The evaluation can be applied to each of the scenarios identified in the risk model and the overall risk assessed.

Table 3. Combination of Consequence with Probability

		Consequence			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate/Low Risk
	Likely	High Risk	Moderate Risk	Moderate/Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate/Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate/Low Risk	Low Risk	Very Low Risk	Very Low Risk

Table 4. Description of risks and likely action required

Very High Risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, or there is evidence that severe harm to a designated receptor is currently happening. This risk, if realised, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required.
High Risk	Harm is likely to arise to a designated receptor from an identified hazard. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short-term and are likely over the longer-term.
Moderate Risk	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the long-term.
Low Risk	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very Low Risk	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

Using the risk model the pollutant linkages are identified and a preliminary estimate of risk undertaken. If there is no pollutant linkage identified, then there is no risk. If the estimate of risk for all the linkages and exposure scenarios is very low at this stage then it is likely that no further assessment will be required.
