

Zone 06 – Bridge to Woodland Trust

OPPORTUNITIES:

1. Removal of invasive and non-native species such as Rhododendron, Buddleia and Himalayan Balsam as a result of clearing the site.
2. Cleared areas allowed to regenerate naturally will improve the quality and biodiversity of the woodland.
3. Further removal of invasive species; Himalayan Balsam from surrounding footpaths leading to new bridge.

CONSTRAINTS:

1. Removal of existing scrub to create working space either side of new bridge.

The Bridge to the Woodland Trust site involves the removal of two areas of existing scrub with no significant trees being affected. The eradication of invasive and non-native species will enhance biodiversity and provide an appropriate level of mitigation for the site.
