

Dear Andrea,

I am writing this letter in support of our new planning application for the floodlighting at Seven Sisters Onllwyn AFC, SA10 9HL.

On our last application, we were recommended to carry out a coal mining risk assessment. After consultation with the CMRA, they have stated that we are able to apply for an exemption. This is under the Part B – Exempt by nature of development section on the gov website - [Planning applications and Coal Mining Risk Assessments - GOV.UK \(www.gov.uk\)](http://www.gov.uk).

The exemption we fall under is for Street furniture and similar, this states lighting as an example with the justification of minimal disturbance of ground.

We were advised by the CMRA that they would class minimal disturbance of the ground as having the foundation for the masts at no more than 500mm below ground level. We have therefore, designed a foundation for the mast that adheres to this recommendation, this design can be found as one of the supportive documents.

The contact details of the case officer at the CMRA are detailed below for you to consult with.

The Coal Authority

Phil Broughton BEng (Hons) CEnv MIMMM
Technical Manager
