

Glyncorrwg Workshops Ecological Assessment - Addendum

Update 27/06/2024

Through working out this scheme it has evolved via the step wise approach as detailed in Planning Policy Wales 12. As the consultant Ecologist I have been involved in all iterations of the plan. Since the writing of the original Ecological Assessment, biodiversity enhancements have been written into the project including: planting of native species in the sustainable urban drainage features; the provision of bird and bat boxes; the inclusion of a native hedge; bringing the highway verge into the NPT Bee Friendly mowing regime. Details of these improvements are found in the Green Infrastructure Statement (ISU-CAM-XX-XX-RP-L-0005-P02), the Landscape Management and Maintenance Plan (ISU-CAM-XX-XX-RP-L-0002 P02) and the Glyncorrwg Soft Landscape Proposals (ISU-CAM-XX-XX-DR-L-0002).
