

Contextual Design and Materiality

The proposed building's massing and form are carefully designed to reflect the specific character of Main Road, referencing the distinctive brightly coloured gables of existing buildings such as 19th century structures of No. 3 Main Road and the Crown and Sceptre Inn. This approach enhances the street's distinct character and contributes to a sense of place. The choice of brickwork is inspired by the prevalent use of brick in the area and the desire for a durable and visually appealing material, the colour is inspired by the bright coloured historic buildings along the north side of Main Road.
