GeoSmart Information

EnviroSmart

Phase 1 Contaminated Land Assessment

Site address
Land at Cherry Grove
Pontardawe
Ynysmeudwy
Neath Port Talbot
SA8 4PX

Grid Reference
272800, 204650

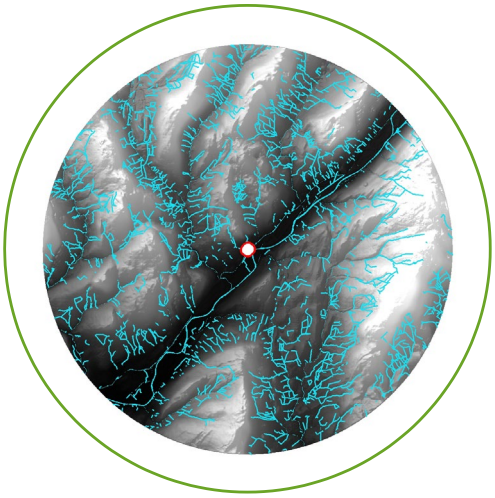

Report prepared for
Steven Davies

Date issued
December 2024

Report status
Final

Site Area
0.31 ha

Report reference
84341R1

Risk – Low to Moderate/low

Given the nature of the historical land use and therefore the potential for limited contamination to be present at the Site, it is recommended that a proportionate programme of site investigation and monitoring works, with a focus upon the garden spaces, be undertaken in order to establish the presence or absence of contamination and to enable a quantitative assessment of the associated environmental risks.

Given that the Site lies in an area where 5 to 10% of homes are at or above the UK radon action level, we recommend that further Radon Assessment is undertaken.

GeoSmart Information

Executive Summary

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contaminated land hazards which may be present at the study site. GeoSmart are providing consultancy and professional opinion based upon our collation, interpretation and assessment of information contained within an Envirocheck report, and other sources where expressly stated (i.e. site visits, photographs, and anecdotal evidence). It is acknowledged that the risk assessment findings are based on documentary sources of information alone.

Site analysis

1. **Probability/likelihood** of a contaminant hazard at the Site	High likelihood	
	Likely	
	Low likelihood	
	Unlikely	
2. Potential **severity/consequence** of any impacts	Severe	
	Medium	
	Mild	
	Minor	
3. **Overall land quality risks posed by the Site**	Very high	
	High	
	Moderate	
	Moderate/low	
	Low	
	Very low	

Summary of existing and proposed development

The Site is currently occupied by three detached dwellings (plots 1, 2, and 3) all with private garden space. Development proposals comprise the retention and completion of the dwellings and associated access and works, including alterations to the existing highway boundary.

Environmental Setting

The underlying superficial geology consists of Glaciofluvial Deposits (c. 99% of Site area) and Alluvium (c. 1% of Site area in south east) which are both classified as a Secondary (A) Aquifer. The bedrock geology consists of the Rhondda Member (western c. 95% of Site) and the Brithdir Member (north eastern c. 5% of Site) which are both classified as a Secondary (A) Aquifer.

The nearest water feature is the Swansea Canal, which is located directly to the south-east of the Site.

The nearest sensitive land use is an area of Restored Ancient Woodland Site located at the south-eastern end of the Site.

Site History

The Site was first developed prior to 1878 as a farmhouse and associated land (suspected dairy farm). Several phases of construction and demolition have occurred throughout the 1900s. All former farm structures were demolished prior to June 2005, from which time the current residential properties were erected. Off-Site land uses primarily comprise residential land use.

Radon

The Site lies in an area where 5 to 10% of homes are at or above the UK radon action level (200 Bq/m3).

Coal Mining

Although the Site lies within an area of historical coal mining, the Site is not located within a Mining Remediation Authority Development High Risk Area.

Summary of Conceptual Site Model (CSM)

Source of Contamination
Potential for inorganic and low volatility organic contaminants to be present within the subsurface soils.
Limited potential for volatile organic contaminants to be present within the subsurface soils.
Potential for asbestos containing materials within the subsurface soils.
Limited potential for dissolved phase contaminants to be present within shallow groundwater.
Potential for radon within the subsurface.

Receptors
Human Health, Controlled Water (groundwater within the underlying Secondary (A) Aquifers and the nearest surface water feature (Swansea Canal; adjacent to southern Site boundary) and Sensitive Land Uses (Ancient Woodland; on-Site).

Human Health (pathway)
Dermal contact, ingestion & inhalation of soils & soil dust. Consumption of home grown produce. Ingress into water supply pipework and subsequent water ingestion. Migration of any localised soil vapours to surface; inhalation indoors. Liberation of sub surface ACMs and inhalation of asbestos fibres. Migration of radon gas towards on-Site buildings; potential to cause long term health effects.

Controlled Waters (pathway)
Dissolution into pore water/shallow groundwater and subsequent migration. Dissolution into aqueous phase and preferential migration via drainage structures. Lateral and vertical groundwater movement via natural or artificial flow paths.

Preliminary Risk Assessment

Overall, the preliminary risk classification of the Site in relation to the proposed redevelopment is considered to be **Low to Moderate/Low**

Recommendations / Next Steps

Phase 2 intrusive investigation

Given the nature of the historical land use and therefore the potential for contamination to be present at the Site, it is recommended that a proportionate programme of site investigation and monitoring works be undertaken in order to establish the presence or absence of contamination and to enable a quantitative assessment of the associated environmental risks.

Radon assessment / mitigation measures

Given that the Site lies in an area where 5 to 10% of homes are at or above the UK radon action level, we recommend that further Radon Assessment is undertaken. Further information can be found at http://www.ukradon.org/information/. Additionally local building control may have further knowledge in relation to radon risks within the area.

Coal Mining Risk

As the Site is not located within a Mining Remediation Authority Development High Risk Area there is no specific requirement to submit any coal mining information and the Mining Remediation Authority will not be consulted by the local planning authority (LPA). The LPA are likely to include the Mining Remediation Authority Standing Advice as an informative note with the decision notice.

1. Introduction

1.1 Background

The study site (from herein known as 'the Site') is situated at Land at Cherry Grove in Pontardawe, Ynysmeudwy. A location plan of the Site is shown in Section 1.5. The approved development plan is shown in Section 1.6. The results of a topographic survey are shown in Section 1.7.

GeoSmart was commissioned by Steven Davies in November 2024 to undertake a Phase 1 Land Quality Assessment for the Site. The report has been requested by Neath Port Talbot Council in order to support Planning Application Reference P2021/0973. It is noted that the application was submitted in September 2021 and the planning approval was granted in November 2024. At the time of the application (2021) all three of the existing properties were evident; one of the properties is understood to have been completed, whereas the remaining two structures required completion (in 2021).

The planning application relates to the *'retention and completion of three detached dwellings and associated access and works'* , including alterations to the existing highway boundary.

The EnviroSmart report has been undertaken by firstly compiling information concerning the Site and the surrounding area, including current and historical land uses, geological records and registered pollution incidents. The information which is gathered is then used to construct a 'conceptual site model', including an understanding of likely contaminant sources, pathways and receptors. Finally, a preliminary assessment of risks posed to identified receptors (i.e., people, buildings or the natural environment) from the anticipated land quality at the Site is performed. The risk assessment methodology is consistent with CIRIA C552 (2001); see Section 3.4 for details.

1.2 Purpose of this report

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contamination hazards which may be present at the Site.

1.3 Report contents

This report is divided into two sections, as described below:

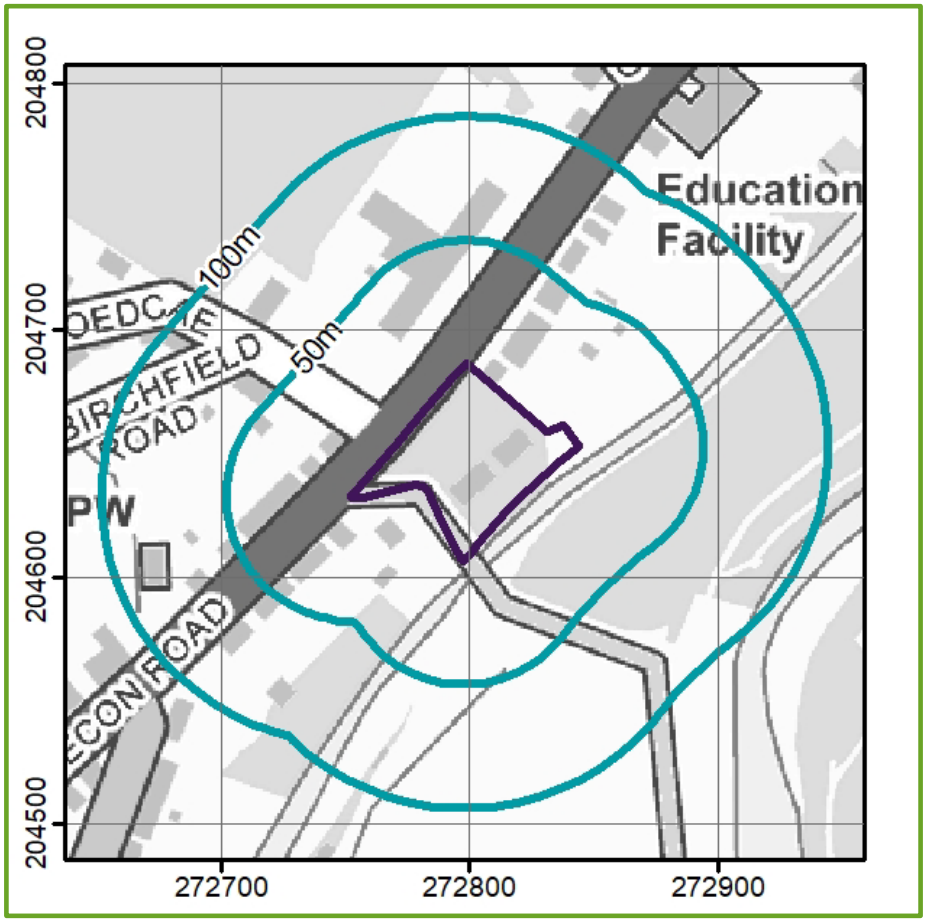

Section	Content	Purpose
Section 2: **LAND QUALITY ASSESSMENT**	A summary of the site history and environmental setting, the findings of the preliminary risk assessment and associated recommendations	To present a clear and concise overview of the land quality issues facing the Site, including recommendations of how to manage any land contamination which may be present
Section 3: **SUPPORTING INFORMATION**	A collection of site specific information on which the land quality assessment is based	To provide detailed information in support of the risk assessment; this section also represents a source of reference data for use in any subsequent site works/assessments

1.4 Report limitations

It is noted that the findings presented in this report are largely based on information supplied by third parties. Whilst we assume that all information is representative of past and present conditions we can offer no guarantee as to its validity.

This report excludes consideration of potential hazards arising from any activities at the Site other than normal use and occupancy for the intended land uses. Hazards associated with any other activities have not been assessed and must be subject to a specific risk assessment by the parties responsible for those activities.

1.5 Site location plan

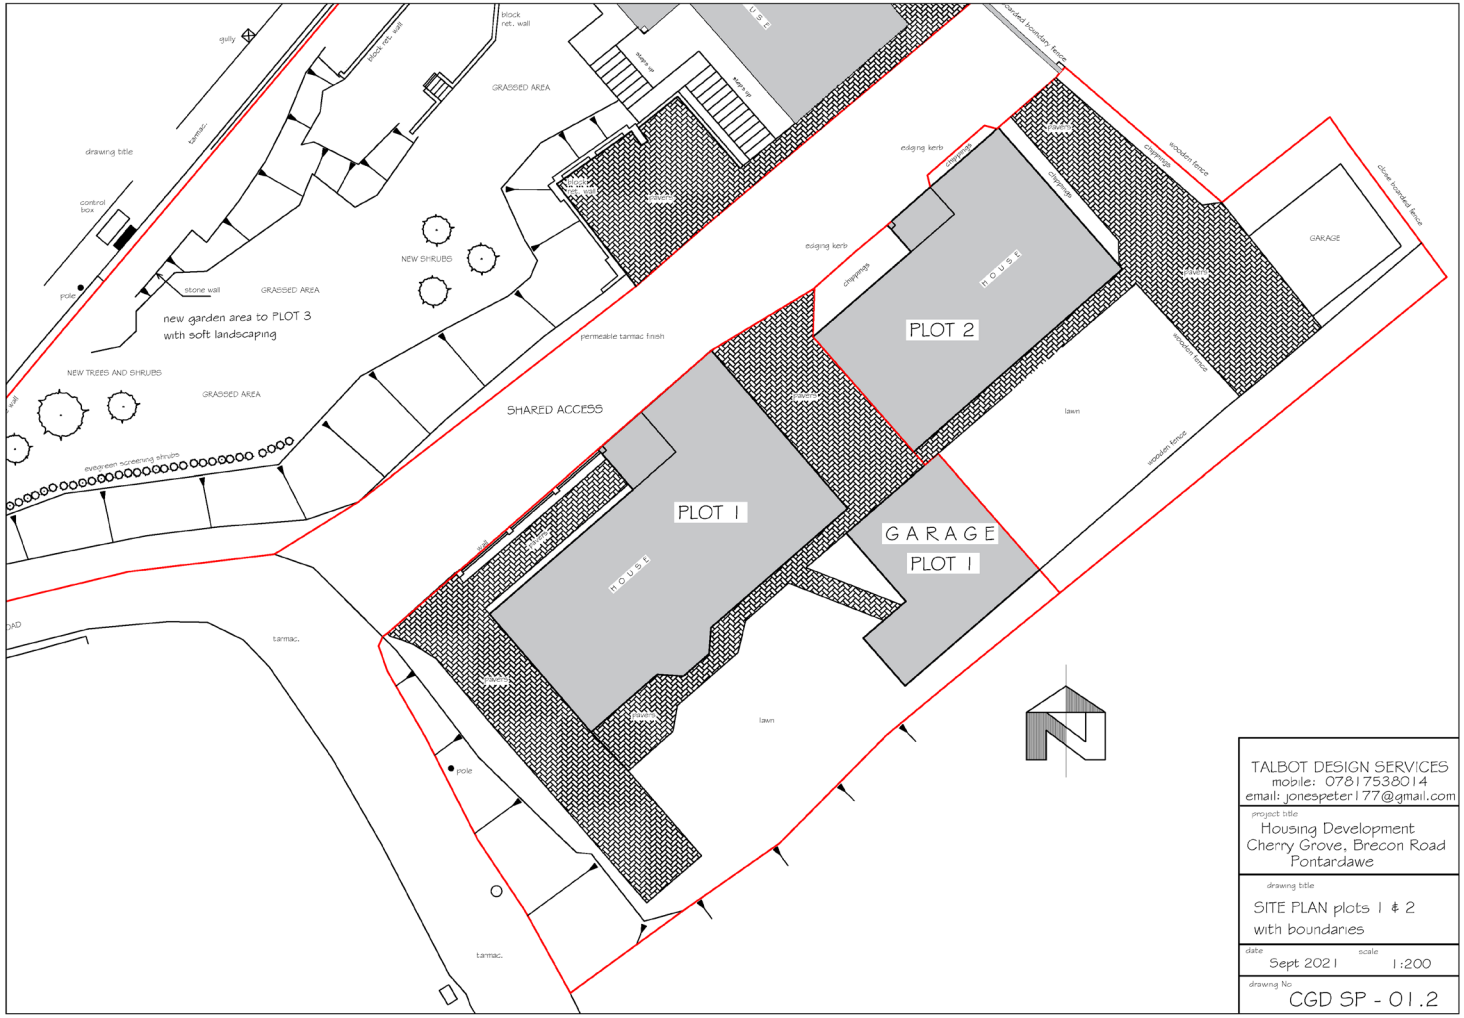

Contains Ordnance Survey data © Crown copyright and database right 2024

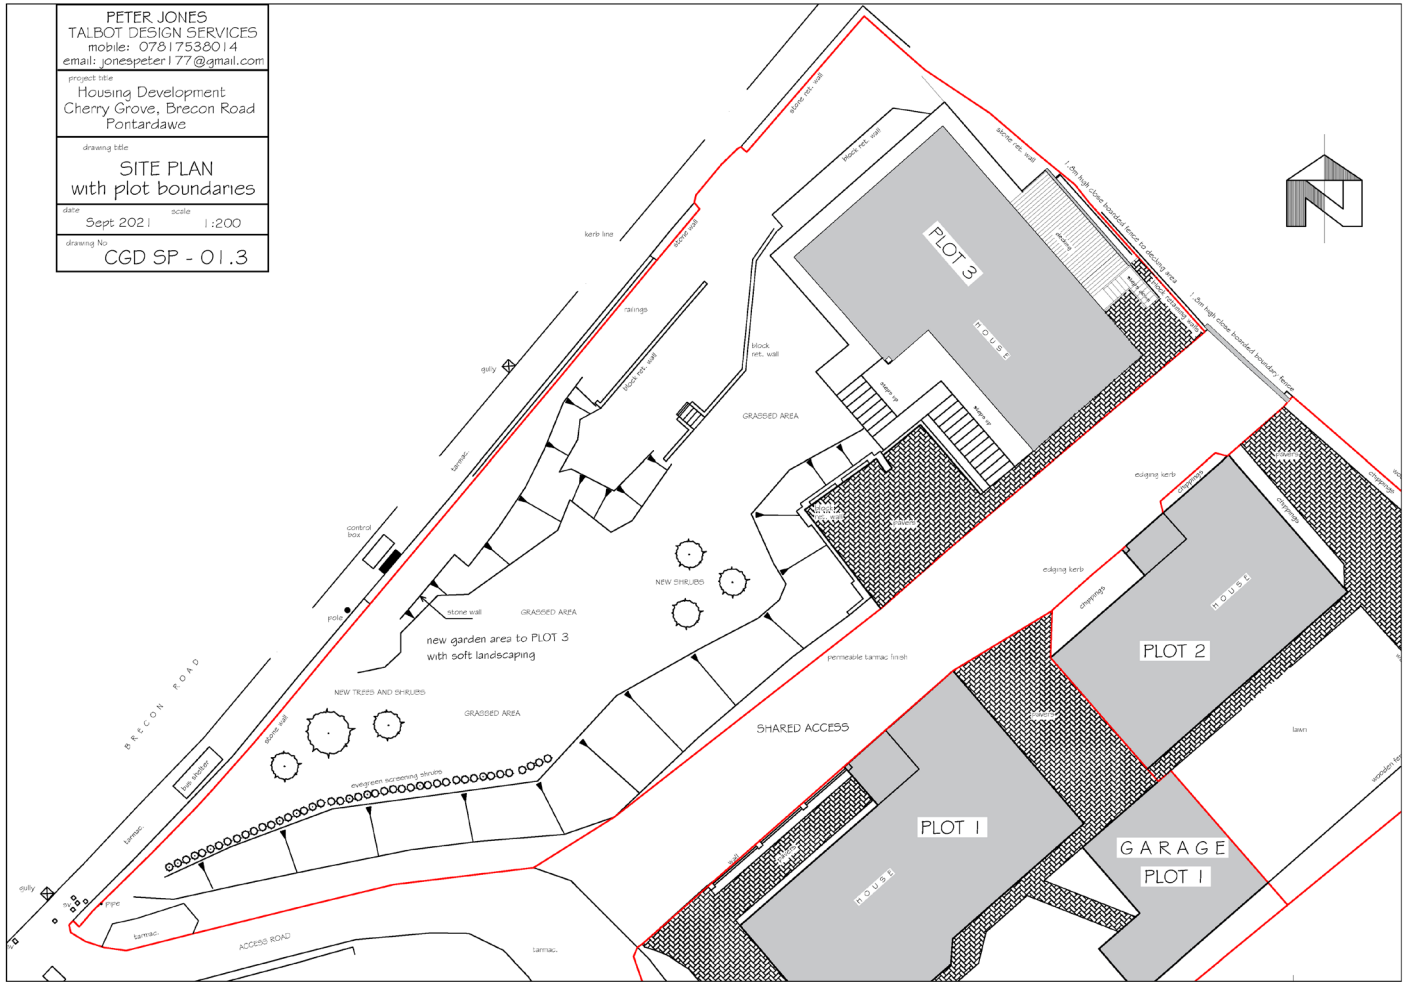

Contains Ordnance Survey data © Crown copyright and database right 2024
BlueSky copyright and database rights 2024

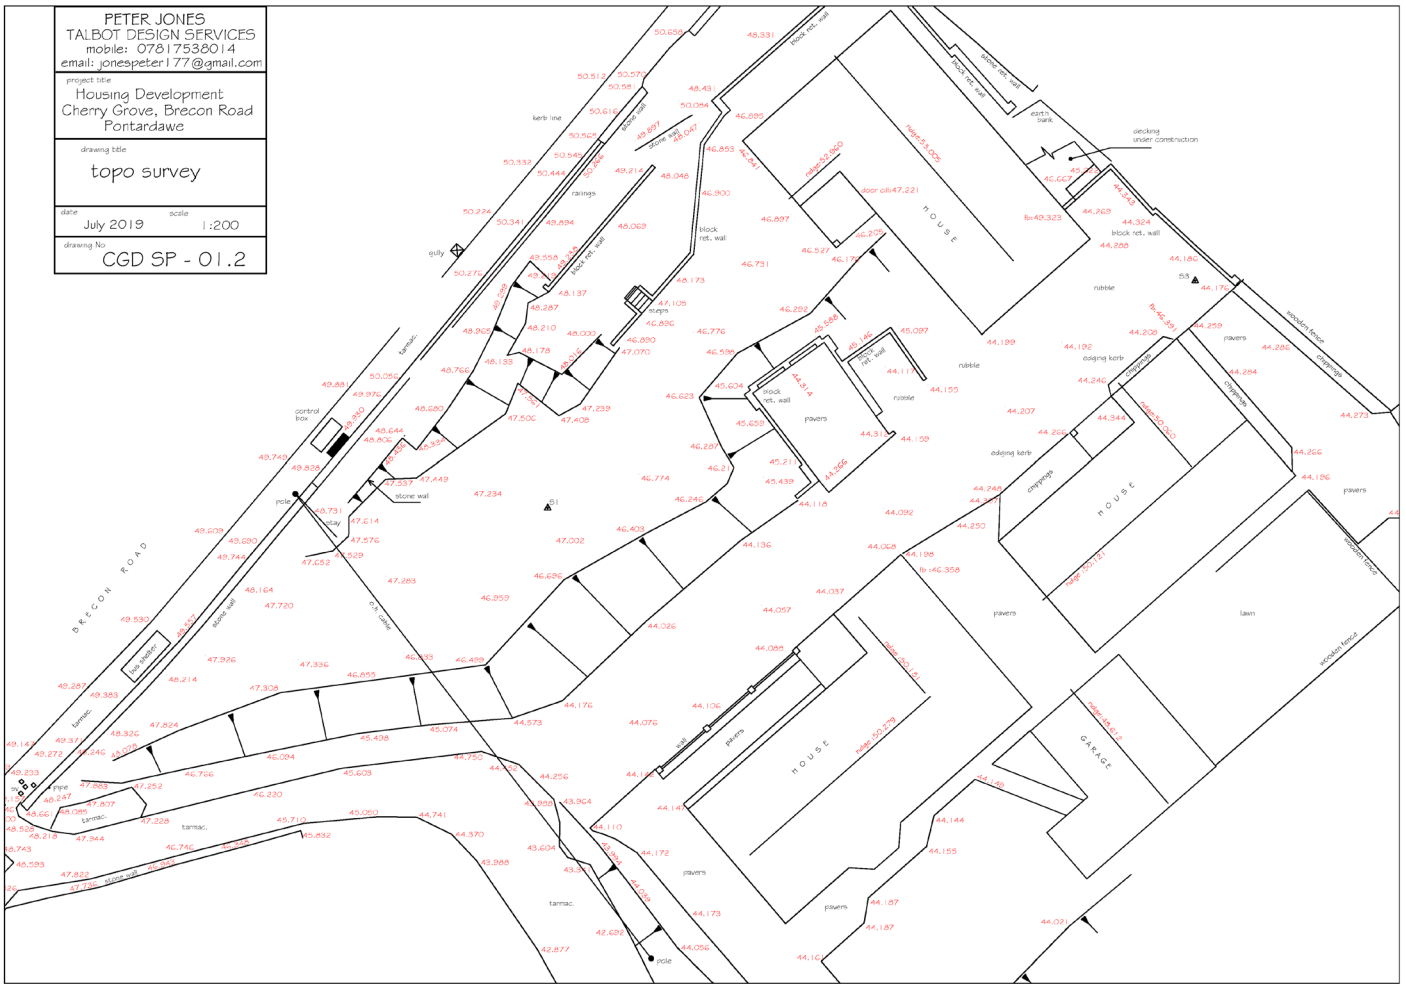

1.6 Approved Site development plan (Plots 1 and 2)

1.6 Approved Site development plan (Plot 3)

1.7 Topographic survey

2. Land quality assessment

2.1 Site details

Site name:	Land at Cherry Grove	Current land cover:	Approximately 60% hardstanding and building cover and 40% garden areas
Current use:	Residential dwellings (3 units)		
Proposed use:	Residential dwellings (3 units)	Site area:	0.31 ha

2.2 Conceptual understanding (potential sources of contamination)

Site history
(historical land use taken within 250m radius of the Site boundary)

Date	Description of land use: On-Site	Description of land use: Off-Site
1878	Several buildings and indeterminate structures, potentially of an agricultural nature, are located on-Site. The Site is bound to the north-west and south-west by public highways, to the north-east by open field and to the south-east by the Swansea Canal, which flows towards the south and west.	The Site is situated within a rural setting. An area c. 50 m south east of the Site (down gradient of the Site) is labelled "Old Lime Kiln"; however, no associated structures are visible. The River Tawe is mapped c. 110 m south east of the Site at its closest point. Glantawe Tin Works are mapped c. 320 m south east of the Site beyond the River Tawe.
1884	No discernible change.	No discernible change.
1898	Two additional building are mapped in the north and south-east of the Site.	Significant residential development directly beyond the highway to the west. The Pontardawe Union Workhouse is mapped c. 25 m north / north east of the Site. Significant expansion of the tin works, now c. 300 m south east of the Site.
1900	No discernible change.	No discernible change.
1918-1919	No discernible change.	Continued residential development from c. 50 m north west of the Site. Further expansion of the tin works, now c. 230 m south east of the Site. A series of quarries are mapped upon the Coed Alltacham (closest c. 220 m north).
1921	No discernible change.	No discernible change.

POTENTIAL **SOURCES** OF CONTAMINATION

Source description

The land use history suggests that there is the potential for contamination to have occurred on-Site relating to the following:

Historical agricultural buildings / dairy farm:
-Bulk storage of fuels and/or miscellaneous chemicals.
-Miscellaneous small scale fuel and chemical spills (i.e., fuels used for heating/agricultural machinery/other vehicles, oils and lubricants, herbicides/pesticides, fertilisers, paints/thinners, creosote, etc.).
-Potential for localised/historical deposition of domestic/agricultural waste materials. Note: there is no direct evidence, including topographic evidence, that any such waste disposal or infilling activities have taken place on the Site.
-Made Ground associated with former development/demolition activities.
-Animal effluent from the housing of livestock within the on-site buildings.
-Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings.
-Localised disposal of effluent wastes.

(continued overleaf)

LOW LIKELI-HOOD

PROBABILITY OF CONTAMINATION

2.2 Conceptual understanding (potential sources of contamination)

Site history *(historical land use taken within 250m radius of the Site boundary)*	Date	Description of land use		POTENTIAL **SOURCES** OF CONTAMINATION	Source description	**LOW LIKELI-HOOD**	**PROBABILITY** OF CONTAMINATION
		On-Site	Off-Site				
	1941-1942	The former structure in the south eastern part of the Site appears to have been removed.	Residential development directly to the north-east of the Site. The union workhouse c. 25 m north is now mapped as the Pontardawe Public Assistance Institution. The quarries upon Coed Alltacham are now mapped as Old Quarry/Quarries and are presumed to be disused.		*(continued)* <u>Residential dwellings</u> -Miscellaneous small scale fuel or chemical spills relating to domestic land-uses.(i.e., fuels used for garden machinery, herbicides, paints/creosote, detergents, etc.). -Potential for localised/historical deposition of residential waste materials (ash, litter, packaging, etc.). -Made Ground/demolition waste materials associated with former development/demolition activities. The land use history suggests that there is the potential for contamination to have occurred <u>off-Site</u> relating to the following: <u>Electricity sub station:</u> -Potential for Polychlorinated Biphenyls (PCB) contamination to have occurred. *Note: given that the electricity sub station was constructed after 1980, it is considered unlikely that PCBs would be present as the use of PCBs ceased in the late 1970s. As such, this potential source will not be carried forward into the risk assessment.* <u>Former Tin Works:</u> -Potential for bulk storage of fuels and/or miscellaneous chemicals. -Miscellaneous fuel and chemical spills (i.e., fuels used for heating & powering machinery/vehicles, oils and lubricants, paints/thinners, degreasers, etc.). *(continued overleaf)*		
	1942-1953	No discernible change.	No discernible change.				
	1953	No discernible change.	No discernible change.				
	1961-1965	Two additional structures of unknown use are mapped in the west and south east of the Site.	The public assistance institution is now mapped as the Danybryn Hostel. The tin works appears to have been demolished between 1964 and 1965.				
	1968	No discernible change.	No discernible change.				
	1969-1979	No discernible change.	The site of the previous tin works (c. 160 m south east) is now mapped as a disused Tip.				
	1982	No discernible change.	No discernible change.				
	1989-1990	Two structures located in the south/south east of the Site appear to have been demolished.	The Danybryn Hostel (c. 25 m north) has been demolished. Several electricity sub-stations are mapped within the vicinity of the Site with the closest c. 35 m north.				
	1991-1992	No discernible change.	No discernible change.				
	1993	No discernible change.	No discernible change.				

2.2 Conceptual understanding (potential sources of contamination)

Site history *(historical land use taken within 250m radius of the Site boundary)*	Date	Description of land use: On-Site	Description of land use: Off-Site	POTENTIAL **SOURCES** OF CONTAMINATION	Source description	**LOW LIKELI-HOOD**	**PROBABILITY** OF CONTAMINATION
	1994	No discernible change.	A home for the elderly is mapped c. 25 m north of the Site upon the site of the previous Danybryn Hostel.		*(continued)* -Potential for localised deposition of boiler ash/coke and other industrial combustion wastes and by-products. Made Ground associated with former development/demolition activities. -Asbestos containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the sub surface surrounding the buildings. *Note: due to the significant distance between the Site and the former works, the time that has elapsed since the removal of the former tin works (prior to 1965), and the presence of intervening drainage features (the River Tawe and the Swansea Canal), there is not considered to be a significant potential for contamination originating from the tin works to have migrated onto on-Site. As such, this potential source has not been carried forward into the risk assessment.* **Quarrying:** - Potential for bulk storage of fuels and/or miscellaneous chemicals. - Miscellaneous fuel and chemical spills (i.e., fuels used for heating & powering machinery/vehicles, oils and lubricants, paints/thinners, degreasers, etc.). - Potential for localised deposition of boiler ash/coke and other industrial combustion wastes and by-products. - Made Ground associated with former development/demolition activities. *Note: given the significant distance between the old quarries and the Site, as well as the time that has elapsed since the cessation of quarrying (c. at least 80 years) the quarries are not considered to be a significant potential source of contamination at the Site. As such, this potential source has not been carried forward into the risk assessment.*		
	1999	No discernible change.	No discernible change.				
	2003	No discernible change.	No discernible change.				
	2006	All former structures on-Site appear to have been demolished and the Site is clear. NB: historical aerial imagery does not reflect this - see additional information below.	No discernible change.				
	2009	No discernible change.	No discernible change.				
	2013	No discernible change.	No discernible change.				
	2016	Two residential dwellings (presumed to be the current plots 1 and 2) are mapped in the south of the Site.	No discernible change.				
	2024 (OS and Aerial Imagery)	Several additional structures are mapped on-Site, comprising a residential dwelling (plot 3) and two garage structures associated with plots 1 and 2.	No discernible change.				

Additional Information	Historical aerial imagery of the Site viewed via Google Earth indicates that the south eastern dwelling (Plot 2) was constructed prior to December 2006; Plot 1 is visibly under construction at this time, and appears structurally complete by December 2010, at which time Plot 3 is also under construction. This differs significantly from the OS mapping which suggests that the Site was clear throughout this time. Between July 2013 and April 2015 much of the shrub/tree cover across the Site was cleared, and Plot 3 appears to be structurally complete prior to June 2018. Information submitted as part of the current planning application indicates that the development (Plot 2) began construction in June 2005, and that the Site was previously used as a farm house and associated land. The Client has recently confirmed that the Site was formerly a dairy farm, including a farm house.

2.2 Conceptual understanding (potential sources of contamination)

Current land use

The Site is currently occupied by three contemporary residential dwellings (constructed from c. 2005), of which at least one is known to be complete.

There are no known buried storage tanks at the Site.

There is no known bulk fuel or chemical storage on Site.

POTENTIAL **SOURCES** OF CONTAMINATION

The Site's current use is unlikely to have given rise to significant land contamination.

UNLIKELY

PROBABILITY OF CONTAMINATION

Neighbouring industrial land uses

(see environmental data report in Section 3.3 for full listing)

There are one or more potentially contaminative land uses are located within 250 m of the Site:

Distance from Site	Number of active industrial land uses	Number of inactive industrial land uses
1 - 50 m	0	1
51 - 100m	0	1
101 - 250 m	0	1

Nr	Nearest distance	Land use / permitted activity / authorisation
0	NA	Fuel station entries
0	NA	Gas pipelines
0	NA	Underground electrical cables
0	NA	Control of major accident hazards sites (COMAH)
0	NA	Notification of installations handling hazardous substances (NIHHS)
0	NA	Explosives sites
0	NA	Planning hazardous substance consents
0	NA	Planning hazardous substance enforcements
0	NA	Sites determined as Contaminated Land under Part IIA of the Environmental Protection Act 1990
2	163 m E	Records of Licensed Discharge Consents.
0	NA	Integrated pollution prevention and control sites
0	NA	Local Authority pollution prevention and control sites
0	NA	Local Authority pollution prevention and control enforcements
0	NA	Records of Category 3 or 4 Radioactive Substance Licences

The potentially contaminative land uses/activities identified in close vicinity of the Site may pose a contamination hazard to the Site should relevant contaminant pathways exist.

Local (within 50 m) contemporary trade directory entries include:
-Dm Painting and Decorating (Painting and Decorating Supplies), c. 48 m west. Status: Inactive.

Local (within 250 m) discharge consents include:
-Lliw Valley Borough Council, c. 163 m east. Discharge type: Unspecified. Receiving water: River Tawe. Status: Consent expired.
-Lliw Valley Borough Council, c. 231 m south. Discharge type: Unspecified. Receiving water: River Tawe. Status: Consent expired.

UNLIKELY

2.2 Conceptual understanding (potential sources of contamination)

EA/NRW recorded pollution incidents *(see environmental data report in Section 3.3 for full listing)*	One or more Environment Agency/Natural Resources Wales pollution incidents have been recorded within 250 m of the Site. These include: An incident occurred in 1998 c. 207 m south of the Site (downstream). The pollutant was unknown and the incident was categorised as minor. An incident occurred in 1996 c. 229 m south of the Site (downstream). The pollutant was light oil and the incident was categorised as minor.	POTENTIAL **SOURCES** OF CONTAMINATION	No potential for gross contamination has been identified in relation to the identified pollution incidents given the timing, location and scale of these recorded events.	**UNLIKELY**	**PROBABILITY** OF CONTAMINATION
Landfills / waste sites *(taken within 500m radius of the Site boundary, see environmental data report in Section 3.3 for full listing)*	There are no BGS recorded landfills located within 500 m of the Site. There are no Natural Resources Wales listed historical landfills located within 500 m of the Site. There are no registered landfills located within 500 m of the Site. There are no Local Authority listed historical landfills located within 500 m of the Site. The following other waste sites are registered within 500 m of the Site: 1 Records of registered waste transfer sites - 'Small' waste transfer site (Old Aladdin Works) c. 496 m south-east. 0 Records of registered waste treatment or disposal sites. 2 Records of licenced waste management facilities. - Metal recycling sites (vehicle dismantlers) c. 420 m (Old Aladdin Works) and 449 m (D B C Site Services) south east.		Given the absence of any historical or operational landfills within close proximity of the Site no associated contamination hazards have been identified. The identified waste management sites are not thought to represent a significant source of contamination which may impact on the Site given the relative distance to the Site and the regulated nature of current activities. NB: The Site of the historic tin works (c. 160 m south east) is mapped as a disused Tip. However, given the minimal potential time of deposition and the presence of intervening watercourses (River Tawe and Swansea Canal), the Tip is not considered to reflect a significant potential source of contamination at the Site.	**UNLIKELY**	

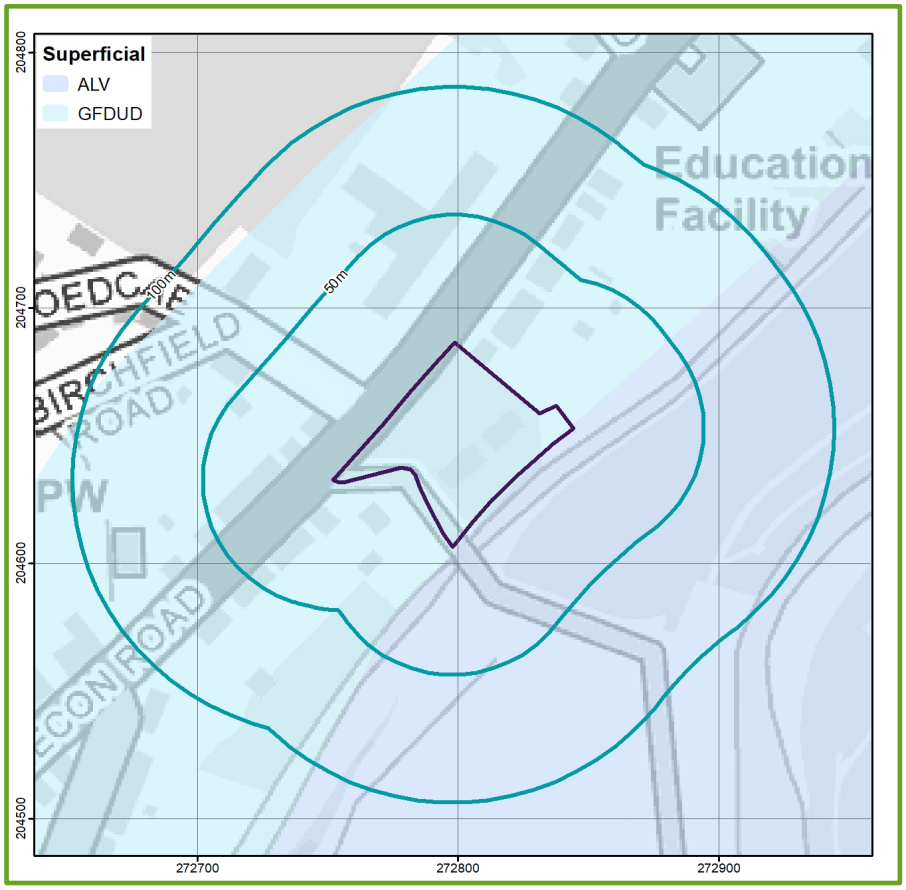

2.2 Conceptual understanding (potential sources of contamination)

Rn Radon *(see environmental data report in Section 3.3 for full listing)*	According to current UK radon mapping the Site lies in an area where 5 to 10% of homes are at or above the UK radon action level (200 Bq/m3).	POTENTIAL **SOURCES** OF CONTAMINATION	5 to 10% of homes are at or above the UK radon action level (200 Bq/m3).	**LIKELY**	**PROBABILITY** OF CONTAMINATION

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

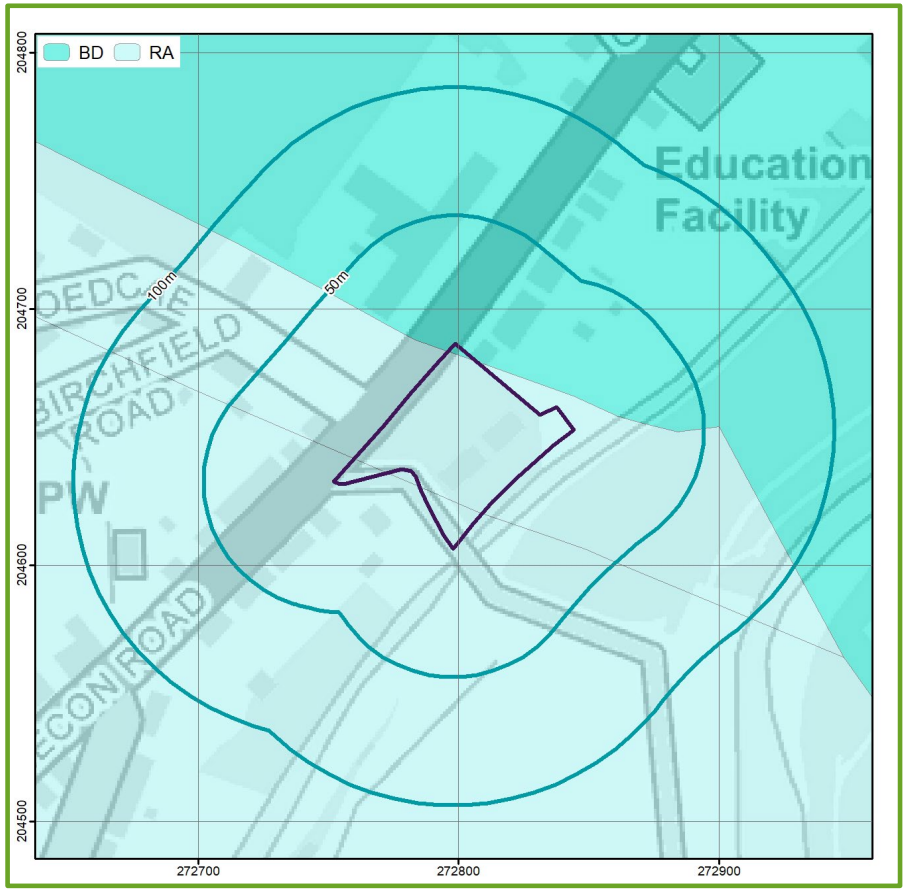

Geology and Groundwater *(see the environmental data report in Section 3.3 for full details)*	British Geological Survey mapping indicates that the underlying superficial geology consists of Glaciofluvial Deposits, Devensian (GFDUD) which comprise of sand and gravel and are classified as a Secondary (A) Aquifer. Alluvium (ALV), comprising of clay, silt, sand, and gravel, is mapped at surface directly to the south-east of the Site; the Alluvium is also classified as a Secondary (A) Aquifer. British Geological Survey mapping indicates that the underlying bedrock geology typically consists of the Rhondda Member (RA), which comprises of mudstone, siltstone and sandstone, and is classified as a Secondary (A) Aquifer. The Brithdir Member (BD), which comprises of sandstone, is mapped directly to the north of the Site and is also classified as a Secondary (A) Aquifer. According to the GeoSmart Groundwater Flood Risk (GW5) Map (GeoSmart, 2024). The risk of groundwater flooding at the Site is 'negligible'. The Site does not lie within a groundwater Source Protection Zone (SPZ). There are no groundwater abstraction licences within 1 km of the Site.	POTENTIAL **RECEPTORS**	A Secondary (A) Aquifer comprises permeable layers capable of supporting water supply at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. Based on the susceptibility of the Site to groundwater flooding, a groundwater flood risk assessment is not considered necessary for the Site. The depth to groundwater beneath the Site is unknown. The absence of any groundwater abstractions does not necessarily indicate a low resource potential. Small scale abstractions, such as for private water supplies, may not be listed.	**MEDIUM**	**POTENTIAL SEVERITY** OF IMPACT

Superficial Geology (BGS, 2024)

Contains Ordnance Survey data © Crown copyright and database right 2024
Contains British Geological Survey materials © NERC 2024

Bedrock Geology (BGS, 2024)

Contains Ordnance Survey data © Crown copyright and database right 2024
Contains British Geological Survey materials © NERC 2024

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

Geohazards *(see the environmental data report in Section 3.3 for full details)*	The Site lies within an area of historical coal mining activity. There are no brine affected areas within 75 m of the Site. The following mining instabilities are located within 500 m of the Site: No or limited artificial ground / Made Ground is anticipated on Site. The following natural hazards are present at or within 50 m of the Site: Compressible ground deposits	POTENTIAL **RECEPTORS**	Although the Site lies within an area of historical coal mining, as the Site is not located within a Mining Remediation Authority Development High Risk Area there is no specific requirement to submit any coal mining information with a planning application and the Mining Remediation Authority will not be consulted by the local planning authority (LPA). The LPA are likely to include the Mining Remediation Authority Standing Advice as an informative note with the decision notice. The Site does not lie within an area of former brine working and is therefore unlikely to be affected by related ground stability issues. Inconclusive Coal Mining, located on-Site. BGS GeoIndex Onshore mapping does not have any artificial deposits recorded at the Site.	**MEDIUM**	**POTENTIAL SEVERITY** OF IMPACT

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)

Surface water *(see the environmental data report in Section 3.3 for full details)*	The nearest water feature is the Swansea Canal, which forms the southern Site boundary. The nearest inland river is recorded c. 50 m to the south of the Site. The Site lies within a Flood Zone 1 (low probability). The following surface water abstraction licences are held within 1 km of the Site: British Waterways Board (effluent/slurry dilution) located c. 640 m south west of the Site (downstream) on the Swansea Canal. Pontardawe Golf Club (spray irrigation water abstraction) located c. 879 m north west of the Site, from a tributary of the Upper Clydach.	**POTENTIAL** RECEPTORS	The close proximity of the identified surface water feature(s) suggests that a potential linkage could occur if any contamination were present on Site. Mobile contamination may potentially enter nearby water features via any shallow groundwater or possibly via preferential flow pathways such as buried services. It is noted that the neighbouring canal feature is likely to be lined and is therefore less likely to be impacted by any on-Site contamination.	**MEDIUM**	**POTENTIAL SEVERITY** OF IMPACT
Environmental designations *(see the environmental data report in Section 3.3 for full details)*	The following environmentally sensitive land uses are present within 500 m of the Site: Eight designated Ancient Woodlands, with the closest located on the southern edge of the Site.		The relatively close proximity of the identified environmental designations suggests that a potential linkage could occur if any contamination were present on Site.	**MEDIUM**	
Human receptors	Proposed residents/users of the Site plus neighbouring residences.		Human receptors are proposed to be present on Site.	**SEVERE**	

2.4 Regulator perspective

Consultation date	11 December 2024	Neath Port Talbot Council
GeoSmart consultant	Alexander Farr	ehd@npt.gov.uk
Consultation outcome	The Council did not respond to GeoSmart within the time frame of this report.	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
On-Site sources -former farmhouse and associated land (suspected dairy farm) -Recent residential dwellings with two garages								
1	Potential for inorganic and low volatility organic contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Site occupants	**MEDIUM**	**LOW LIKELIHOOD**	**MODERATE/LOW RISK**	The former use of the Site as a suspected small scale dairy farm (including various phases of construction and demolition) may have given rise to Made Ground and some associated inorganic and low volatility contamination. Any such contamination could pose a potential risk to future Site users, most notably within soft standing garden spaces.
2		Consumption of home grown produce	HH		**MEDIUM**	**LOW LIKELIHOOD**	**MODERATE/LOW RISK**	
3		Ingress into water supply pipework and subsequent water ingestion	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
4		Building materials in direct contact with aggressive ground	PROP	Site buildings	**MEDIUM**	**UNLIKELY**	**LOW RISK**	Aggressive ground conditions are not anticipated to be present.
5		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Glaciofluvial Deposits, Devensian (a Secondary (A) Aquifer) and Alluvium (a Secondary (A) Aquifer)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The risk classifications reflect the likely absence of any widespread inorganic and low volatility organic contamination and also the relatively modest Site area. It is also noted that the Site is not located within an SPZ and that there are no licensed groundwater abstractions within 1 km of the Site.
6		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Rhondda Member (a Secondary (A) Aquifer) and Brithdir Member (a Secondary (A) Aquifer)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	
7		Dissolution into pore water/shallow groundwater and subsequent lateral migration	CW	Swansea Canal (directly beyond the southern Site boundary)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The risk classifications reflect the likely absence of any widespread sources of inorganic and low volatility organic contamination and also the assumed lined nature of the canal feature.
8		Dissolution into aqueous phase and preferential migration via drainage structures	CW		**MEDIUM**	**UNLIKELY**	**LOW RISK**	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
9	Potential for **inorganic** and low volatility organic contaminants to be present within the subsurface soils	Dissolution into pore water/shallow groundwater and subsequent lateral migration	ECO	Ancient Woodland (on-Site)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The risk classifications reflect the likely absence of any widespread inorganic and low volatility organic contamination which may pose a direct risk to the woodland situated at the southern end of the Site.
10	Potential for **volatile organic** contaminants to be present within the subsurface soils	Dermal contact, ingestion & inhalation of soils & soil dust	HH	Site occupants	**MEDIUM**	**UNLIKELY**	**LOW RISK**	A significant VOC contaminant source is considered to be unlikely, given the known historical land use history.
11		Consumption of home grown produce	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
12		Ingress into water supply pipework and subsequent water ingestion	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
13		Migration of vapours to surface; inhalation indoors	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
14		Migration of vapours to surface; inhalation outdoors	HH		**MEDIUM**	**UNLIKELY**	**LOW RISK**	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
15	Potential for **volatile organic** contaminants to be present within the subsurface soils	Building materials in direct contact with aggressive ground	PROP	Site buildings	**MEDIUM**	**UNLIKELY**	**LOW RISK**	Aggressive ground conditions are not anticipated to be present.
16		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Glaciofluvial Deposits, Devensian (a Secondary (A) Aquifer) and Alluvium (a Secondary (A) Aquifer)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The risk classification reflects the likely absence of any significant VOC contamination within the subsurface soils, based on the known historical land use. It is also noted that the Site is not located within an SPZ and that there are no licensed groundwater or surface water abstractions within 500 m of the Site. The risk classifications also reflect the assumed lined nature of the canal feature.
17		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Rhondda Member (a Secondary (A) Aquifer) and Brithdir Member (a Secondary (A) Aquifer)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	
18		Dissolution into pore water/shallow groundwater and subsequent migration	CW	Swansea Canal (directly beyond the southern Site boundary)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	
19		Dissolution into aqueous phase and preferential migration via drainage structures	CW		**MEDIUM**	**UNLIKELY**	**LOW RISK**	
20		Dissolution into pore water/shallow groundwater and subsequent lateral migration	ECO	Ancient Woodland (on-Site)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
21	Potential for **asbestos** containing materials within the subsurface **soils**	Liberation of sub surface ACMs and inhalation of asbestos fibres	HH	Site occupants	**MEDIUM**	**LOW LIKELIHOOD**	**MODERATE/LOW RISK**	Given that several phases of construction and demolition have taken place on-Site it is possible that some demolition wastes / Made Ground may be present on-Site; these materials have the potential to include some residual ACMs which could pose a potential risk to future Site users, most notably within soft standing garden spaces.
22	Potential for **dissolved phase** contaminants to be present within **shallow groundwater**	Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Glaciofluvial Deposits, Devensian (a Secondary (A) Aquifer) and Alluvium (a Secondary (A) Aquifer)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	The risk classifications reflect the likely absence of any significant dissolved phase contamination within the subsurface soils, based on the known historical land use. It is also noted that the Site is not located within an SPZ and that there are no licensed groundwater or surface water abstractions within 500 m of the Site. The risk classifications also reflect the assumed lined nature of the canal feature.
23		Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Rhondda Member (a Secondary (A) Aquifer) and Brithdir Member (a Secondary (A) Aquifer)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	
24		Lateral and vertical groundwater movement via natural or artificial flow paths	CW	Swansea Canal (directly beyond the southern Site boundary)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	
25		Lateral and vertical groundwater movement via natural or artificial flow paths	ECO	Ancient Woodland (on-Site)	**MEDIUM**	**UNLIKELY**	**LOW RISK**	

2.5 Preliminary Risk Assessment

Nr	Sources	Pathways	TYPE	Receptors	Consequence	Probability	Risk classification	Comments
26	Potential for elevated **methane** to be present within the sub-surface **soils**	Lateral and vertical migration into on-Site buildings; potential to cause an explosion	HH	On-Site properties and their occupants	**SEVERE**	**UNLIKELY**	**MODERATE/LOW RISK**	Based on the prevailing conceptual understanding an appreciable on-Site gas source is considered unlikely. It is noted that the Site is located within a designated coal mining area, however, according to Mining Remediation Authority mapping the Site is situated within a 'Development Low Risk Area' of the defined coalfield; hence, whilst coal mining has taken place in this area, it was at such depth not to pose a public safety or ground stability risk to new development. The risk classification is a reflection of the severity of consequences rather than the likelihood of occurrence.
27		Lateral migration towards off-Site buildings; potential to cause an explosion	HH	Off-Site properties and their occupants	**SEVERE**	**UNLIKELY**	**MODERATE/LOW RISK**	
28	Potential for elevated **carbon dioxide** to be present within the subsurface **soils**	Lateral and vertical migration into on-Site buildings; potential to cause asphyxiation	HH	Occupants of on-Site buildings	**SEVERE**	**UNLIKELY**	**MODERATE/LOW RISK**	
29		Lateral migration towards off-Site buildings; potential to cause asphyxiation	HH	Occupants of off-Site buildings	**SEVERE**	**UNLIKELY**	**MODERATE/LOW RISK**	
30	Potential for **radon** within the subsurface	Lateral migration towards on-Site buildings; potential to cause long term health effects	HH	Occupants of on-Site buildings	**MEDIUM**	**LIKELY**	**MODERATE RISK**	The Site lies in an area where 5 to 10% of homes are at or above the UK radon action level (200 Bq/m3).
						OVERALL RISK RATING	**LOW TO MODERATE/LOW RISK**	

2.6 Next Steps

✓	**Phase 2 intrusive investigation**		Given the nature of the historical land use and therefore the potential for limited contamination to be present at the Site, it is recommended that a proportionate programme of site investigation and monitoring works, with a focus upon the garden spaces, be undertaken in order to establish the presence or absence of contamination and to enable a quantitative assessment of the associated environmental risks. Further advice: **Please contact info@geosmartinfo.co.uk for further information regarding the need for a Phase 2 investigation.** For information on reputable site investigation companies, enquiries can be made directly to your local authority or via www.endsdirectory.com

2.7 Other recommendations

✓	**Radon assessment / mitigation measures**		Given that the Site lies in an area where 5 to 10% of homes are at or above the UK radon action level (200 Bq/m3), we recommend that further Radon Assessment is undertaken. Further information can be found at http://www.ukradon.org/information/ Additionally local building control may have further knowledge in relation to likely radon risks within the local area.

3. Supporting Information

The following supporting information is contained in this section:

Section	Content
3.1	Referenced materials used in the EnviroSmart reporting
3.2	Site photographs
3.3	Published environmental data records (Landmark Envirocheck report. REF: 365493979_1_1) including: • Aerial photographs and site map • Environmental permits, incidents and registers • Landfill and other waste sites • Current land use information • Geology • Hydrogeology and hydrology • Flooding • Designated environmentally sensitive sites • Other environmental factors
3.4	Risk assessment methodology
3.5	Historical land use maps

Disclaimer

This report has been prepared by GeoSmart in its professional capacity as soil and water specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract and taking account of the manpower and resources devoted to it by agreement with its client, and is provided by GeoSmart solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report as a whole, taking account of the terms of reference agreed with the client. The findings are based on the information made available to GeoSmart at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, GeoSmart may, by prior written agreement, agree to such release, provided that it is acknowledged that GeoSmart accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. GeoSmart accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual or otherwise, against GeoSmart except as expressly agreed with GeoSmart in writing.

Important consumer protection information

This search has been produced by GeoSmart Information Limited, Suite 9-11, 1st Floor, Old Bank Buildings, Bellstone, Shrewsbury, SY1 1HU.
Tel: 01743 298100
Email: info@geosmartinfo.co.uk

GeoSmart Information Ltd is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

The Search Code

• provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom
• sets out minimum standards which firms compiling and selling search reports have to meet
• promotes the best practice and quality standards within the industry for the benefit of consumers and property professionals
• enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.
By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

The Code's core principles

Firms which subscribe to the Search Code will:
• display the Search Code logo prominently on their search reports
• act with integrity and carry out work with due skill, care and diligence
• at all times maintain adequate and appropriate insurance to protect consumers
• conduct business in an honest, fair and professional manner
• handle complaints speedily and fairly
• ensure that products and services comply with industry registration rules and standards and relevant laws
• monitor their compliance with the Code

Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award up to £5,000 to you if the Ombudsman finds that you have suffered actual financial loss and/or aggravation, distress or inconvenience as a result of your search provider failing to keep to the Code.
Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.

TPOs contact details:

The Property Ombudsman scheme
Milford House
43-55 Milford Street
Salisbury
Wiltshire SP1 2BP
Tel: 01722 333306
Fax: 01722 332296
Email: admin@tpos.co.uk

You can get more information about the PCCB from www.propertycodes.org.uk

Please ask your search provider if you would like a copy of the search code

Complaints procedure

GeoSmart Information Limited is registered with the Property Codes Compliance Board as a subscriber to the Search Code. A key commitment under the Code is that firms will handle any complaints both speedily and fairly. If you want to make a complaint, we will:

• Acknowledge it within 5 working days of receipt.
• Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt.
• Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time.
• Provide a final response, in writing, at the latest within 40 working days of receipt.
• Liaise, at your request, with anyone acting formally on your behalf.

If you are not satisfied with our final response, or if we exceed the response timescales, you may refer the complaint to The Property Ombudsman scheme (TPOs): Tel: 01722 333306, E-mail: admin@tpos.co.uk.

We will co-operate fully with the Ombudsman during an investigation and comply with his final decision. Complaints should be sent to:

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

Please note that the Environment Agency / Natural Resources Wales / SEPA have a charging policy in place for enquiries.

3.4 Risk assessment methodology

The method of risk evaluation adopted in this document is consistent with CIRIA C552 (2001). Hence, risk is considered to be a function of both the probability (likelihood) of contamination occurring at the study site and also the potential severity (consequence) of the environmental impacts associated with this contamination.

The classification system used to define contaminant probability, consequence and risk is described in the following tables.

Table A: Classification of probability

Classification	Definition
High likelihood	There is a contaminant linkage and an event that appears either very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a contaminant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term, and likely over the long term.
Low likelihood	There is a contaminant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is contaminant linkage but circumstances are such that it is improbable that an event would occur even in the long term.

Table B: Classification of consequence

Classification	Receptor	Definition	Examples
Severe	Humans	Short-term (acute) risk to human health likely to result in "significant harm" as defined in the CTL Statutory Guidance	High concentrations of cyanide on the surface of an informal recreation area
	Controlled waters	Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource	Major spillage of contaminants from site into controlled water
	Property	Catastrophic damage to buildings/property	Explosion, causing building collapse (can also equate to an acute human health risk if buildings are occupied)
	Ecology	A short-term risk to a particular ecosystem, or organism forming part of such eco-system	Potentially long term derogation of a designated site or protected species
Medium	Humans	Chronic damage to human health ("significant harm" as defined in the CTL Statutory Guidance)	Concentrations of a contaminant from a residential site exceed the site-specific assessment criteria
	Controlled waters	Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution)	Leaching of contaminants from a site to a principal or secondary aquifer
	Property	Significant damage to crops, buildings, structures and services	Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability)
	Ecology	A significant change in a particular ecosystem	Death of a species within a designated nature reserve

Table B: Classification of consequence (continued)

Classification	Receptor	Definition	Examples
Mild	Humans	Contamination present although unlikely to constitute a significant chronic health risk	Concentrations of a contaminant from a public access site moderately exceed the generic assessment criteria
	Controlled waters	Pollution of non-water resources	Pollution of non-classified groundwater
	Property	Damage to sensitive buildings/structures/services	Aggressive ground conditions leading to potential for long term degradation of buried concrete
	Ecology	Damage to the environment	Localised damage to aquatic habitat causing temporary relocation of certain species
Minor	Humans	Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc.)	The presence of contaminants at such concentrations that protective equipment is required during site works
	Controlled waters	Potential minor release of contamination to local water features	Short term or low volume release of potentially polluting material to a secondary surface water course of low existing quality
	Property	Easily reparable effects of damage to buildings, structures and services. Harm which may result in a financial loss, or expenditure to resolve	The loss of plants in a landscaping scheme. Discolouration of concrete
	Ecology	Short term, localised damage may occur; consequences are spatially and temporally limited	Short term or localised disruption to in situ flora or fauna; no lasting effects

Table C: Risk classification (comparison of consequence and probability)

Probability	Consequence (severity)			
	Severe	**Medium**	**Mild**	**Minor**
High likelihood	Very high risk	High risk	Moderate risk	Low risk
Likely	High risk	Moderate risk	Moderate/low risk	Low risk
Low likelihood	Moderate risk	Moderate/low risk	Low risk	Very low risk
Unlikely	Moderate/low risk	Low risk	Very low risk	Very low risk

Risk Key

Very High	**High**	**Moderate**	**Moderate/Low**	**Low**	**Very Low**
There is a high probability that severe harm could arise to a designated receptor from an identified hazard without appropriate remediation action	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remediation action	It is possible that without appropriate remediation action harm could arise to a designated receptor. It is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely any harm would be mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely that, at worst if any harm was realised any effects would be mild	The presence of an identified hazard does not give rise to the potential to cause harm to a receptor

Glamorganshire

Published 1884

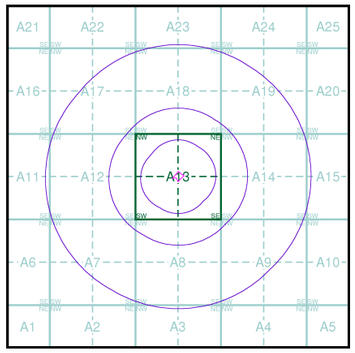

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

GeoSmart Information

Swansea

Published 1976

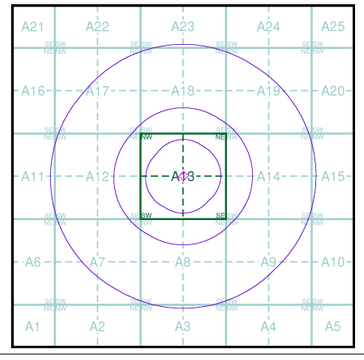

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

VectorMap Local

Published 2024

Source map scale - 1:10,000

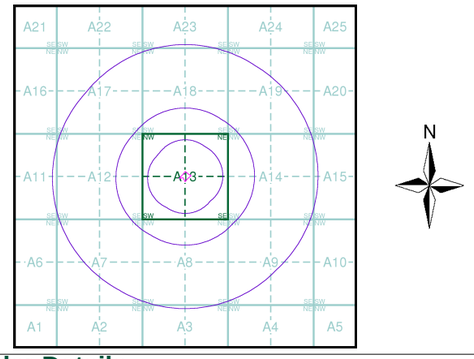

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

GeoSmart Information

Glamorganshire

Published 1878

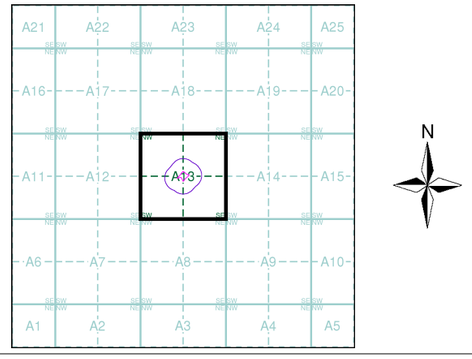

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Additional SIMs

Published 1989

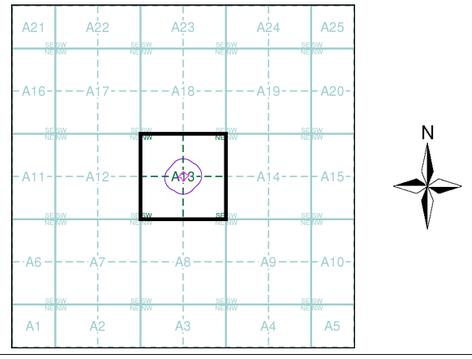

Source map scale - 1:2,500

The SIM cards (Ordnance Survey's `Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

GeoSmart Information

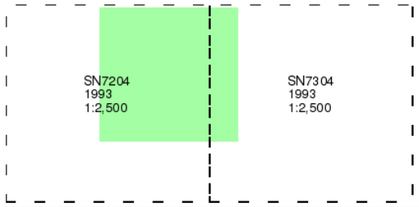

Large-Scale National Grid Data

Published 1993

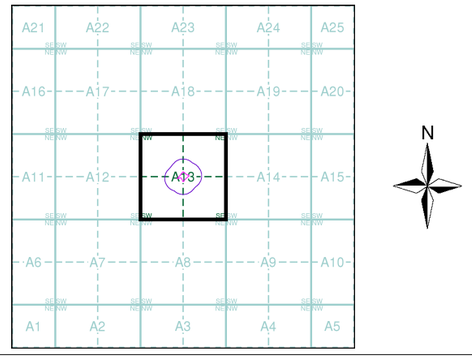

Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.
