

GREEN INFRASTRUCTURE STATEMENT

EXISTING VEGETATION

Small area of willow, brambles and grass along the northern boundary. This will be removed to improve drainage and facilitate works. Most of the site is covered by asphalt

PROPOSALS:

New wildflower meadow areas along with planting of new native trees and shrubs to mitigate loss and create more habitat for wildlife.

Improved drainage due to exposure of soil and creation of swale and basin which will improve surface water management in broader landscape

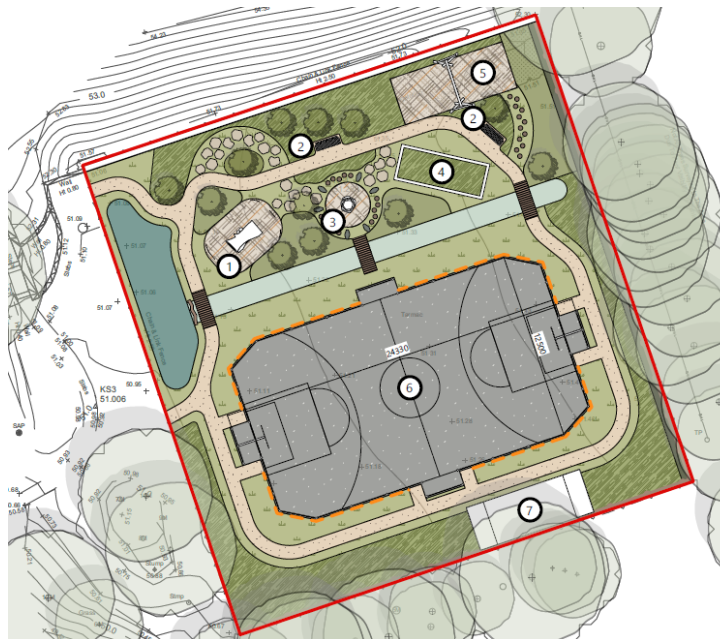

Creation of hedgerow to improve habitat connectivity and bird nesting opportunities

Use of native climbers to frame sections of the MUGA to provide more diverse habitat

Inclusion of amenity grass areas for improved site permeability; use of natural materials (logs, stacked stones) where possible for as habitat for invertebrates, amphibians and mammals.

Former tennis court looking south

Proposal will reduce area of impermeable surface and increase habitat
