# Phase 1 Site Investigation & Preliminary Risk Assessment

## Client: Lidl Great Britain Ltd

## Briton Ferry Road, Neath

## Report No: 769.10.01

## September 2025

REMADA GEO CONSULTANTS

***Executive Summary***

*Remada Ltd was commissioned by Lidl Great Britain Ltd (hereafter 'the client') to undertake a Phase 1 Preliminary Risk Assessment for a proposed store at Briton Ferry Road, Neath, South Wales SA11 1AS. The objectives of this assessment were to present a preliminary conceptual site model to identify plausible pollutant linkages as a preliminary risk assessment and to provide recommendations for subsequent investigation work.*

***Site Setting***

*The study site occupies an irregular (but very broadly triangular) plot to the west of A474 Briton Ferry Road. The site comprises three distinct areas, with a Lidl store present in the south-western area, a separate retail building previously occupied by 'Vitality Health & Fitness' and 'Poundstretcher' in the north-western area, and associated car parking occupying the eastern half of the site. Access to the study site is from School Road on the eastern boundary.*

***Site History***

*The earliest available mapping of 1878 and 1881 indicates it to be predominantly occupied by marshland. A railway line associated with the adjacent (off-site) Melin Crythan Works encroaches into the northern margins of the site in an arc. A 'Japan Works' encroaches into the south-western boundary of the site, extending off-site towards the south-west and expanding to occupy the southern half of the site by 1889. The Cryddan Brook bisects the central area of the site and would continue to do so until 1995, when it is no longer shown. By 1919 the railway sidings have expanded into the central area of the site, with rationalisation of these occurring by 1952. Buildings associated with the Melin Crythan Works / Tin Plate Works were constructed in the eastern area of the site in 1882, with the works complex being redeveloped between 1952 and 1958 when a new elongated building was constructed in the north-eastern margins of the site.*

*Between 1980 and 1987, the majority of the buildings in the southern area of the site are no longer shown, with only a north-west to south-east orientated elongate building still present parallel to Cryddan Brook and still labelled as 'Melyn Works'. A 'tank' of unspecified contents is indicated to be present encroaching into the eastern boundary of the site. By 1989, the majority of the buildings have been removed from the entire site, with only one small rectangular structure remaining adjacent to the eastern boundary. The area to the north of Cryddan Brook was labelled as a Coal Yard. The existing Lidl store building appears to have been constructed between 1993 and 1995, with its associated car park occupying the southern and eastern areas of the site. The Electricity Sub-Station adjacent to the eastern corner first appears in 1995, whilst the two now-defunct retail units in the north-western quadrant appear between the mapping of 1999 and Opus' investigation on-site in 2016.*

***Geology / Hydrogeology***

*Published geological maps record that the site is underlain by undivided deposits of Landscaped Ground and superficial Tidal Flat Deposits; the latter being designated as Secondary A and Secondary Undifferentiated Aquifers. The bedrock directly underlying the site is formed of the Hughes Member, for which the parent unit is the Pennant Sandstone Formation and designated as a Secondary A Aquifer.*

*Information obtained during Opus' intrusive investigation in the northern area of the site in 2016 recorded granular Made Ground to a maximum depth of 4.7m bgl, underlain by very soft grey CLAY. Historic BGS trial pit records in the eastern and north-eastern area of the site dating from 1994 recorded Made Ground to a maximum depth of 2.0m bgl, underlain by very clayey fine SAND to the base of a pit at 3.0m bgl.*

***Mining***

*The site is located within an area which 'might be' affected by coal mining activity and is located within a Mining Remediation Authority designated Coal Mining Reporting Area, although it is not located within a Development High Risk Area. Consequently, it is recommended that Remada's previous Coal Mining Risk Assessment is updated the reflect the findings of this Phase 1 report.*

***Unexploded Ordnance (UXO) Risk***

*There is no indication of former military use from the desk study. Furthermore, the freely available Zetica UXO risk mapping indicates the site to be located within an area where the bomb risk is 'Low' due to WWII bombardment. This is defined by Zetica as an area having an indicated bombing density of 15 bombs per 1000 acres or less.*

***Radon***

*The site is located in both an Intermediate Probability Radon Area (3 to 5% of homes are estimated to be at or above the Action Level) and a Higher Probability Radon Area (10 to 30% of homes are estimated to be at or above the Action Level). Consequently, full radon protection measures are necessary in the proposed new development.*

***Recommendations***

*Environmental*

*The desk study has identified a number of on-site and off-site potential sources of contamination that would require further investigation. The following is recommended:*

- *Investigation of the lateral and vertical extent of made ground/fill beneath the proposed store footprint.*
- *Collection of soil and groundwater samples from the areas identified above for contaminants of concern; and*
- *Ground gas monitoring.*

*In accordance with CIRIA C665 the monitoring period should comprise not less than four visits for a proposed commercial development and should cover the "worst case" scenario which would occur during falling atmospheric pressure and, in particular, weather conditions such as rainfall and frost.*

*Geotechnical*

*It is recommended that a ground investigation is undertaken to enable preliminary foundation design.*

# 1. INTRODUCTION

Remada Ltd was commissioned by Lidl Great Britain Ltd (hereafter 'the client') to undertake a Phase 1 Preliminary Risk Assessment for a proposed store at Briton Ferry Road, Neath, South Wales SA11 1AS, at the location indicated in **Figure 1**.

## 1.1. Objectives

The objectives of this assessment are as follows:

- to develop a preliminary conceptual model of the site to identify plausible pollutant linkages; and
- to provide recommendations for subsequent investigation work.

## 1.2. Scope of Work

The scope of work comprised a:

- review of local geological, hydrogeological, ground stability, and environmental data and historical mapping pertaining to the site and surrounding area; and
- identification of potential sources, pathways, and receptors, and development of a preliminary conceptual site model.

Although the scope of work did not include a site reconnaissance visit, Remada carried out a site visit on Wednesday 17th September 2025. The findings of this visit are documented in **Section 4.**

Due to the study site's positioning within Wales, the scope was also designed in line with the Welsh Land Contamination Working Group's Development of Land Affected by Contamination: A Guide for Developers version 4: September 2023. This guidance represents the culmination of a co-operative effort involving the Welsh Local Government Association (WLGA) and Natural Resources Wales (NRW). For the purpose of this report, any references to the Environment Agency (EA) should be seen as interchangeable with NRW.

## 1.3. Previous Reports

The following report has previously been prepared for the site by Remada:

- Coal Mining Risk Assessment, Remada Ltd report ref: 769.01.02, issued in April 2022.

The following report was provided by the Client for review:

- Geo-Environmental Investigation Report Briton Ferry Road, Neath January 2016, Opus CC/J-B0756.00 (R01).

## 1.4. Limitations

The comments given in this report and the opinions expressed are based on the information reviewed and observations during site work. However, there may be conditions pertaining to the site that have not been disclosed by this assessment and therefore could not be taken into account.

# 2. DESK STUDY

## 2.1. Description of Site

| | |
|---|---|
| **Site Description** | The study site occupies an irregular (but very broadly triangular) plot to the west of A474 Briton Ferry Road and south-west of Neath town centre, as indicated in **Figure 2.**<br><br>The site comprises three distinct areas, with a Lidl store present in the south-western area, two defunct retail units in the north-western area, and associated car parking occupying the eastern half of the site. Access to the study site is from School Road on the eastern boundary.<br><br>The existing Lidl store building is of single-storey steel-framed construction, with predominantly brick walls forming the southern, western and south-eastern facades. The north-eastern and northern facades are predominantly formed of brick and glass.<br><br>The former retail building in the north-western area was previously occupied by Vitality Health & Fitness and Poundstretcher. This building also appears to be of steel-framed construction, with its eastern façade formed primarily from brickwork. The majority of the northern, western and southern facades are finished in metal cladding. Immediately to the south of the building, a concrete surfaced road gives access to the delivery areas to the rear and the adjacent Lidl store delivery bay.<br><br>The remaining area of the site is predominantly occupied by asphalt-surfaced car parking and soft landscaping, with semi-mature deciduous trees present along the eastern boundary adjacent to Briton Ferry Road. An electricity sub-station is present adjacent to the eastern corner of the site.<br><br>A palisade fence marks the western boundary of the site, with a Network Rail access gate (ID: 207m 49ch) noted for the adjacent (off-site) South Wales Main Line. The south-western boundary is formed of a concrete post and wooden panel fence, with an Esso fuel filling station beyond. The remainder of the site boundaries are open and marked by the presence of pavements and roads. |
| **Area of Site** | 11203 $m^2$. |
| **Site Elevation** | The topographic elevation of the site ranges from circa 6.20m AOD (metres above ordnance datum) adjacent to the south-western boundary and circa 7.60m AOD adjacent to the north-eastern boundary. |
| **National Grid Co-ordinates** | 274660 (E), 196470 (N) |

## 2.2. Site Setting

The site is situated in a mixed commercial and residential area.

| | |
|---|---|
| **North:** | Cryddan Brook is present adjacent to the northern boundary of the site, with a car park beyond. |

| | |
|---|---|
| **East:** | The A474 Briton Ferry Road bounds the site to the east, with predominantly residential properties beyond. |
| **South:** | The south-eastern boundary of the site is formed by A474 Briton Ferry Road, whereas an Esso fuel filling station is present beyond the south-western boundary. The area beyond is predominantly occupied by residential properties. |
| **West:** | A railway line forms the western boundary of the site, with a metal manufacturer, the Neath Canal and the River Neath beyond. |

### 2.3. Site History

A summary of the historical land use of the site and surrounding area follows.

| Map Date | Description of on-site activities |
|---|---|
| 1878 | The earliest available mapping covers the northern half of the site in 1878 and indicates it to be predominantly occupied by marshland. A railway line associated with the adjacent (off-site) Melin Crythan Works encroaches into the northern margins of the site in an arc. A north-west to south-east orientated access road bisects the northern area of the site, although no structures are indicated to be present. |
| 1881 | The mapping of 1881 covers the entirety of the study site and indicates that the majority of the southern site is also occupied by marshland at this time. A 'Japan Works' encroaches into the south-western boundary of the site, extending off-site towards the south-west. |
| 1884 | Similar to above. |
| 1889 | The site has been redeveloped and can be separated into two distinct areas. The southern half of the site is occupied by an expansion of the Japan Works, complete with several elongate buildings and outbuildings. The former Melin Crythan Works off-site to the north has been expanded and is now labelled as 'Tin Plate Works'. The railway system serving the works has been expanded, with railway lines present in the northern and eastern areas of the site. Two buildings associated with the Tin Plate Works have been erected in the eastern corner of the site. An unlabelled feature (likely a surface watercourse) is present bisecting the central area. |
| 1900 | Similar to above. |
| 1919 | By 1919 the railway sidings have expanded into the central area of the site, although the two buildings previously identified in the eastern corner have been removed. The arcing railway line that encroached into the northern margins of the site has also been removed. |
| 1921 | Similar to above. |
| 1935 | Similar to above. |
| 1936 | Similar to above. |

| | |
|---|---|
| 1938 | Similar to above. |
| 1952 | There has been a rationalisation of the sidings within the northern and eastern areas of the site, with only two lines now being present. The previously unlabelled feature bisecting the central area is now labelled as Cryddan Brook, which flows towards the north-west and north. The works complex encroaching into the north-eastern area of the site is labelled as 'Melyn Works (Sheet & Tinplate)'. |
| 1958 | The works complex encroaching into the north-eastern area has been redeveloped and is now labelled only as 'Works'. A new elongated building has been constructed in the north-eastern margins of the site, with a new fan of railway lines installed to serve it. |
| 1964 | Similar to above. |
| 1967 | New access tracks have been constructed in the northern half of the site, replacing the former fan of railway lines. A 'hopper' and several cranes are indicated to be present in the northern area. The southern area of the site is now labelled as 'Melyn Works' |
| 1980 | Similar to above. |
| 1987 | The majority of the buildings in the southern area of the site are no longer shown, with only a north-west to south-east orientated elongate building still present parallel to Cryddan Brook and still labelled as 'Melyn Works'. A 'Tank' of unspecified contents is indicated to be present encroaching into the eastern boundary of the site. |
| 1989 | The majority of the buildings have been removed from the entire site, with only one small rectangular structure remaining adjacent to the eastern boundary. The area to the north of Cryddan Brook is labelled as a Coal Yard. |
| 1993 | Similar to above. |
| 1995 | A building occupying a similar footprint to the present-day Lidl store has been constructed in the south-western quadrant of the site. The southern and eastern areas of the site are now occupied by an associated car park, with an Electricity Sub-Station labelled adjacent to the eastern corner. Cryddan Brook no longer bisects the site, although it is labelled adjacent to Briton Ferry Road off-site to the north-east. |
| 1999 | Similar to above. |
| 2025 | The site takes its present form, with the retail units now present in the north-western area. |

| **Map Date** | **Description of off-site activities** |
|---|---|
| 1881 | The western boundary of the site is already formed of the South Wales Main Line located in a slight cutting, with marshland and the Neath Canal located beyond. Briton Ferry Road forms the eastern boundary of the site, complete |

| | |
|---|---|
| | with its tramway following the course of the road in a north-east to south-west orientation. The buildings and unlabelled tanks associated with Melin Crythan tinplate works are present immediately to the north of the site. A row of terraced houses (labelled as Mile End Row) is present on the opposite side of Briton Ferry Road approx. 10m south-east of the site, whilst a school is present approx. 10m to the east. A smithy is recorded approximately 80m south-east of the site. |
| 1899 | The former marshland shown beyond the railway line to the west of the site is now occupied by an amalgamation of buildings and railway lines associated with the 'Eagle Tin Plate Works' and 'Melin Crythan Chemical Works'. |
| 1919 | The works building associated with 'Eagle Tin Plate Works' is located from circa 50m west of the site, whilst a 'Steel Sheet & Galvanising Works' is present from circa. 90m north-west. |
| 1935 | Similar to above. |
| 1951 | The tramway that was previously located along Briton Ferry Road is no longer shown, nor is the former smithy to the south-west of the site. |
| 1952 | Similar to above. |
| 1958 | Similar to above. |
| 1964 | Similar to above. |
| 1967 | Several tanks are now labelled within the Melyn Works (engineering) complex to the north-east of the study site, with the nearest being located approx. 70m to the north-east. An associated Electricity Sub-Station is labelled circa. 90m north-east. |
| 1974 | Similar to above, although there has been a noticeable rationalisation of the railway sidings to the north and west of the site. |
| 1982 | All the former railway sidings to the north and west of the site have been removed, leaving just the two lines of the South Wales Main Line. |
| 1987 | The former terraced housing ('Mile End Row') located to the south-east of the site has been replaced rows of new properties, also labelled as 'Mile End Row', The former Japan Works buildings to the south-east of the site have been replaced by a fuel filling station (occupying the same footprint as the present day Esso site). |
| 1989 | A Coal Yard is recorded approximately 40m to the north-east of the site. |
| 1990 | Similar to above. |
| 1993 | Similar to above. |
| 1999 | The majority of the former works buildings to the north and north-east of the site have been removed. |

| | |
|---|---|
| 2006 | Redevelopment of the former works site to the north-east has resulted in the construction of the present-day School Road, along with a large rectangular building matching the footprint of the present-day 'Castle Neath Bingo'. |

## 2.4. Proposed Site Use

It is understood that the proposed site use for the site will be a Lidl retail store with associated car park and soft landscaping. A proposed indicative site layout plan is presented as **Figure 3,** with the site being accessed off School Road along the eastern boundary. The proposed store footprint is indicated to be in the south-western area of the site, with the remaining areas being a combination of car parking, HGV access and soft landscaping.

## 2.5. Environmental Setting

### *2.5.1. Made Ground and Superficial Geology*

Information from the environmental report and the British Geological Survey (BGS) 1:50,000 scale map Sheet 247 (Swansea) indicates that the site is underlain by Landscaped Ground (Undivided). The BGS describes these anthropogenic deposits as *'an area where the land surface (natural or artificial) has been extensively remodelled, but where it is impracticable or impossible to delineate separate zones of Made Ground, Worked Ground or Disturbed Ground'.*

The superficial deposits underlying the site are indicated to comprise Tidal Flat Deposits. The BGS describe these as *forming 'extensive nearly horizontal marshy land in the intertidal zone that is alternately covered and uncovered by the rise and fall of the tide. They consist of unconsolidated sediment, mainly mud and/or sand. They may form the top surface of a deltaic deposit.'*

The majority of the site is designated as a Secondary Undifferentiated Aquifer, which are defined by the Environment Agency as *'aquifers where it is not possible to apply either a Secondary A or B definition because of the variable characteristics of the rock type'.* However, the eastern margins of the site are designated as a Secondary A Aquifer, which comprises *'permeable layers that can support local water supplies, and may form an important source of base flow to rivers'* (ref Envirocheck **Appendix B**).

### *2.5.2. Bedrock Geology*

The bedrock directly underlying the site is formed of the Hughes Member, for which the parent unit is the Pennant Sandstone Formation. The BGS describes this Member as typically comprising *'Green-grey, lithic arenites ('Pennant sandstones'), with thin mudstone/siltstone and seatearth interbeds, and mainly thin coals'.*

The bedrock is designated as a Secondary A Aquifer (ref Envirocheck **Appendix B**).

### *2.5.3. Historic BGS Borehole Records*

There are two historic BGS borehole records on-site, as summarised below:

- Within West Glamorgan County Council's Trial Pit 2 (BGS ID: 371456, ref: SS79NW213) located on the eastern boundary adjacent to Briton Ferry Road in 1994, Made Ground was encountered to a depth of 2.0m bgl. These granular deposits were described as *'Medium dense becoming loose black silty ash clinker sandstone SAND & GRAVEL with occasional cobbles and clayey pockets'.* Below 2.0m bgl, the natural strata comprised 'very clayey fine SAND' to the base of the trial pit at 3.0m bgl. A fast water inflow was recorded at 1.6m bgl.

- Within West Glamorgan County Council's Trial Pit 3 (BGS ID: 371457, ref: SS79NW214) located on the north-eastern boundary in 1994, Made Ground was encountered to the base of the trial pit at 1.9m bgl. These granular deposits were described as *'old concrete foundations infilled with loosely compacted slabs of concrete, brick and builders rubble, highly broken asbestos sheets, wire rope, domestic refuse, glass fragments and some ash, clinker SAND & GRAVEL'.*

### *2.5.4. Groundwater Abstractions*

There are no groundwater abstraction points within 2km of the study site (ref Envirocheck **Appendix B**).

### *2.5.5. Source Protection Zones*

The site is not located within a Groundwater Source Protection Zone (ref Envirocheck **Appendix B**).

### *2.5.6. Surface Water Features and Abstractions*

The nearest surface water feature is indicated to be the Cryddan Brook, located 4m to the north-east of the site at its nearest point (ref Envirocheck **Appendix B**).

There are no surface water abstraction points within 2km of the study site (ref Envirocheck **Appendix B**).

### *2.5.7. Flooding Vulnerability*

The site is located in an area with the potential for groundwater flooding to occur at the surface. The majority of the site is located within an area of extreme flooding from rivers or seas without defences (Zone 2), whilst Zone 3 areas encroach into the eastern and south-eastern margins of the site (ref Envirocheck **Appendix B**).

### *2.5.8. Ground Stability*

The Envirocheck Report (**Appendix C**) provides the following information regarding ground stability:

| | |
|---|---|
| Collapsible Deposits | There is a 'no' hazard rating from collapsible rocks. |
| Compressible Ground | There are 'no' and 'moderate' hazard ratings from compressible ground. |
| Rock Solubility / Dissolution | There is a 'no' hazard rating from rock solubility at the site. |
| Landslides | There is a 'very low' hazard rating from landslides. |
| Running Sand | There are 'no' and 'moderate' hazard ratings for running sands. |
| Shrinking / Swelling of Clay | There is a 'very low' hazard rating for shrinkage / swelling of clay. |

### *2.5.9. Radon*

The site is located in both an Intermediate Probability Radon Area (3 to 5% of homes are estimated to be at or above the Action Level) and a Higher Probability Radon Area (10 to 30% of homes are estimated to be at or above the Action Level). Consequently, full radon protection measures are necessary in the proposed new development (ref Envirocheck **Appendix C**).

### *2.5.10. Environmentally Sensitive Site Designations*

There are four (4 No.) areas of Ancient Woodland recorded within 500m of the study site, with the nearest being located 374m to the east. The Eaglesbush Valley local nature reserve is also recorded 269m to the east of the site (ref Envirocheck **Appendix C**).

## 2.6. Industrial Land Use

There are twenty-seven (27 No.) contemporary trade directory entries locations within 250m of the site. The nearest of these pertain to the adjacent petrol station, road haulage services (86m north-west) and commercial operations from Milland Road Industrial Estate (ref Envirocheck **Appendix B**).

There is one (1 No.) fuel station entry within 500m of the study site. This is located 6m to the south-west at Mile End Service station and is recorded as being open (ref Envirocheck **Appendix C**).

## 2.7. Environmental Permits, Incidents & Registers

There are four (4 No.) integrated pollution control entries within 250m of the study site. All four entries are located 97m to 104m north at Quasar Chemicals Ltd, for the manufacture and use of organic chemicals within the chemical industry.

There are four (4 No.) permitted process entries within 250m of the study site. The nearest is a Local Authority Pollution Prevention and Controls (LAPPC) permit for Mile End Service Station, located 21m to the south-west of the site (ref Envirocheck **Appendix C**). The remaining three LAPPC permits are for aluminium and aluminium alloy processes 75m to the north (revoked), a printworks located 146m to the north-east (authorised) and furnaces for the extraction of non-ferrous metal from scrap (revoked).

There are four (4 No.) recorded pollution incident entries within 250m of the site. The nearest was located 42m to the north and pertains to the accidental spillage/leakage of light oil in October 1991. The incident was recorded as being a Category 2 (Significant Incident) (ref Envirocheck **Appendix B**).

## 2.8. Landfill & Waste Sites

The Envirocheck search has included a check on the Local Authority's landfill coverage at the site. Neath Port Talbot County Borough Council has supplied landfill data (ref Envirocheck **Appendix C**).

There are two (2 No.) historical landfill sites recorded within 1km of the study site. The nearest is located 782m to the north and pertains to a landfill site at Neath Abbey which accepted inert, industrial, commercial, household and special waste types (ref Envirocheck **Appendix C**).

There are two licenced waste management facilities located within 500m of the study site. Both records are located 103m to the north-east and pertain to a metal recycling site which still appears to have an effective licence (ref Envirocheck **Appendix C**).

## 2.9. Mining

The site is located within an area which may be affected by coal mining activity (ref Envirocheck **Appendix C).** Consequently, a Consultants Coal Mining Report (ref: 51003006070001) was obtained from the Coal Authority as part of Remada's CMRA (report ref: 769.01.02) issued in April 2022 and is included as **Appendix D**. The pertinent findings of this Report are reproduced overleaf:

*Past Underground Mining*

No past mining recorded.

*Probable Unrecorded Shallow Mining*

None.

*Spine Roadways at Shallow Depth*

No spine roadway recorded at shallow depth.

*Mine Entries (refer to plan within Coal Authority Report)*

| Entry type | Reference | Grid reference | Treatment description | Mineral | Conveyancing details |
|---|---|---|---|---|---|
| Adit | 274196-009 | 274725 196378 | | Coal | |

The adit is located approximately 1km to the south of the site.

*Abandoned mine plan catalogue numbers*

| | | |
|---|---|---|
| SWR1671 | SWR2654 | PO0 |
| SW1916 | | |

*Outcrops*

| Seam name | Mineral | Seam workable | Distance to outcrop (m) | Direction to outcrop | Bearing of outcrop |
|---|---|---|---|---|---|
| WESTERNMOOR | Coal | Yes | Within | N/A | 139 |

*Geological faults, fissures and breaklines*

No faults, fissures or breaklines recorded.

*Opencast Mines*

None recorded within 500m of the enquiry boundary.

*Coal Authority Managed Tips*

None recorded within 500m of the enquiry boundary.

*Mine Gas*

None recorded within 500m of the enquiry boundary.

### 2.10. Unexploded Ordnance (UXO) Risk

A non-specialist UXO screening exercise was initially carried out for the site by considering (a) any evidence of UK defence activities on or near the site evident from the gathered desk study information and (b) the unexploded aerial-delivered ordnance (UXO) regional risk mapping produced by Zetica.

There is no indication of former military use from the desk study.

Furthermore, the freely available Zetica UXO risk mapping (presented in **Appendix E**) indicates the site to be located within an area where the bomb risk is 'Low' due to WWII bombardment. This is defined by Zetica as an area having an indicated bombing density of 15 bombs per 1000 acres or less.

# 3. REVIEW OF AVAILABLE REPORTS

The client has provided Remada with the following report for the northern half of the site:

- Geo-Environmental Investigation Report Briton Ferry Road, Neath January 2016, Opus CC/J-B0756.00 (R01).

The reports listed above have been reviewed to provide an indication of ground conditions and any potential constraints associated with the proposed development, as well as assist with the design of Remada's intrusive investigation. The pertinent findings are reproduced and summarised below. The findings have also been incorporated into the Preliminary Conceptual Site Model presented as **Table 1**.

## 3.1. Geo-Environmental Investigation (Opus, 2016)

Opus investigated the retail unit land immediately to the north of the existing Lidl store in 2016. At the time of Opus' investigation, the building's use was as a 'Poundstretcher' store and childrens' play centre ('Kidz Korner'). Opus' report presented a review of an earlier report by Earth Science Partnership (2002).

### *3.1.1 Site History*

*The earliest available historical map within Opus' report dated 1881 record the site as low lying marsh land in the north and the Japan Works in the south. The marsh land was subsequently developed as an extension of the Melin Crythan Works to the north whilst the works to south was present on the 1983 map but replaced by the current store building in the subsequent map dated 2006.*

### *3.1.2 Published Geology, Hydrogeology*

| Age | Stratigraphic Name | Description |
|---|---|---|
| Holocene Epoch (QH) | Landscaped Ground (Undivided) | The site is shown to have Landscaped Ground at the near surface. |
| Holocene Epoch (QH) | Tidal Flat Deposits | Tidal Flat Deposits form superficial deposits across the site, and normally comprises "*consolidated soft silty clay, with layers of sand, gravel and peat*". |
| Westphalian D Sub-age (CD) | Hughes Member | The Hughes Member is the recorded bedrock geology across the site, and is listed as "*green-grey, lithic arenites ("Pennant sandstones"), with thin mudstone/siltstone and seatearth interbeds, and mainly thin coals*". |

*The Environment Agency classifies the superficial deposits underlying the site as Secondary Undifferentiated Aquifer. The Environment Agency classifies the bedrock underlying the site as Secondary A Aquifer.*

### *3.1.3 Radon*

*The site is in an area where less than 1% of homes are above the radon action level and where no radon protective measures are necessary.*

### *3.1.4 Ground Conditions*

A summary of the ground conditions from Earth Science Partnership's 2002 investigation and Opus' 2016 investigation on-site is presented overleaf:

*Earth Science Partnership*

*The ground investigation comprised seven trial pits and two light cable percussion boreholes and found that the ground conditions comprised Made Ground to depths of 3.25m to 3.60m bgl, underlain by Alluvial superficial deposits to depths of 5.95m to 7.30m bgl, and further underlain by Fluvio-glacial gravels. Concrete obstructions were identified in five of the exploratory holes. The maximum depth of the trial pits was to 3.50m bgl and the boreholes was to 15.45m bgl.*

*Earth Science Partnership (ESP) also refer to having sight of Rotary Open Hole Borehole Logs produced by Atkins for the local area which indicate the presence of Fluvio-glacial gravels to depths of 40m bgl. ESP conclude that despite the geological map interpretation, the Westernmoor Coal Seam is likely to be eroded from beneath the site and is no longer present.*

*Opus*

*Eight window sample boreholes (WS1- WS7) were advanced across the site using a small, tracked, light percussion window sampling rig on 3rd and 4th December 2015. These were located to provide adequate coverage to characterise the ground conditions beneath the available areas of the site. The window sample boreholes were advanced to depths of between 0.40m and 5.00m below ground level (bgl).*

*In the area of the car park, the Made Ground generally comprised a thin layer of asphalt, underlain by grey gravel sub-base, and further underlain by ashy, sandy gravel and cobbles. Constituents included brick, metal, sandstone and slag. The Made Ground in this area was penetrated to a maximum depth of 1.20m bgl, and a concrete slab was identified at 0.40m bgl in WS7.*

*To the rear of the commercial units, the Made Ground generally comprised ashy, gravel and sand, with occasional cobbles of brick and concrete. The base of the Made Ground was proven to the rear of the existing building at a depth of 4.7m bgl in WS3.*

*Natural strata beneath the Made Ground was only encountered in WS3, and comprised grey,very soft consistency, very low strength CLAY.*

### *3.1.5 Chemical Analysis - Soils*

*Opus*

*The results of the chemical testing of soil samples have been reviewed in accordance with the current legislative framework and criteria to assess the risk to human health. Soil Organic Matter (SOM) analysis has also been undertaken to enable the determination of appropriate screening values for organic contaminants. The average SOM% value for the site is 3.0% therefore screening values applicable for 3% SOM have been used within the generic screening assessment.*

*No metal, PAH, Cyanide, Phenol, TPH, BTEX, MTBE or VOC concentrations were found to exceed their adopted screening values in any of the tested soil samples. However, Asbestos fibres were identified with the Made Ground in WS1, WS3 and WS6, in addition to a bulk sample in WS1. Hence, it is considered that there is requirement for remedial action with respect to asbestos to be undertaken as part of the proposed development of the site with respect to human health.*

### *3.1.6 Ground Gas*

*Opus*

*A maximum carbon dioxide concentration of 1.1% v/v and peak flow of 2.0 l/hr has been recorded in the single monitoring visit undertaken to date. No detectable concentration of methane has been recorded across all monitoring wells. In line with the recommendations provided in CIRIA 665, a preliminary GSV of 0.022 l/hr has been calculated for carbon dioxide. The GSV's for carbon dioxide put the site within 'Characteristic Situation 1' (Very Low Risk) in accordance with CIRIA 665.*

### *3.1.7 Ground Gas*

*Soakaway tests in accordance with BRE 365 have not been undertaken as part of this investigation. Given the significant thicknesses of Made Ground, and the presence of natural cohesive strata beneath, it is considered that soakaways are unlikely to provide a suitable drainage solution for the proposed development.*

## 3.2. Coal Mining Risk Assessment (Remada, 2022)

Remada has previously prepared a Coal Mining Risk Assessment (CMRA) for the site. Whilst this CMRA report (ref: 769.01.02) will be updated with the findings of this Phase 1 Desk Study, the conclusions and recommendations have been reproduced below:

### *3.2.1. Conclusions*

*Site History*

*A review of historic maps did not identify the presence of shafts or adits within the site or vicinity of the site.*

*Published Geology*

*The site is located less than 500m south-east from the North-East to South-West trending Neath Disturbance.*

*The bedrock in the vicinity of the site is formed of the Pennant Sandstone Formation. This parent unit has an approximate thickness of 1000m with units of grey mudstone, coal seams and seatearth subdivided into successive members that are defined by key coal horizons that in the vicinity of the site outcrop perpendicular to the Neath Disturbance.*

*The Hughes Member sandstone (a child unit of the Pennant Sandstone Formation) is recorded directly beneath the store footprint. The BGS generalised vertical section indicates it has a thickness of 265m with the following vertical succession of coal seams: Coal, Westernmoor, Mountain Coal and Garlant. The vertical separation between the Westernmoor and Mountain coal is approximately 80m and the general angle and direction of dip is between 12° to 15° North North-East.*

*The Westernmoor coal seam outcrops less than 125m to the north of the site and it is estimated that underlying Mountain Coal seam would be present at a depth of 80 to 100m beneath the site.*

*Previous Ground Investigation*

*In 2015 a ground investigation of retail unit land immediately to the north of the Lidl building recorded made ground to a maximum depth of 4.7m overlying very soft clay.*

*Consultants Mining Report*

*The Coal Authority Consultants Mining Report did not identify past underground mining or a probability of unrecorded shallow workings beneath the site. The nearest mine entry is an adit to south-east of the site.*

### *3.2.2. Recommendations*

*The assessment has not identified a potential for the site to be impacted by either shallow worked seams or shafts and no further investigation or action is recommended.*

## 4. SITE WALKOVER

An inspection of the site was undertaken on 17th September 2025 by Peter Dickinson of Remada Ltd as recorded in the photographs below. There were no visual or olfactory indicators of contamination.

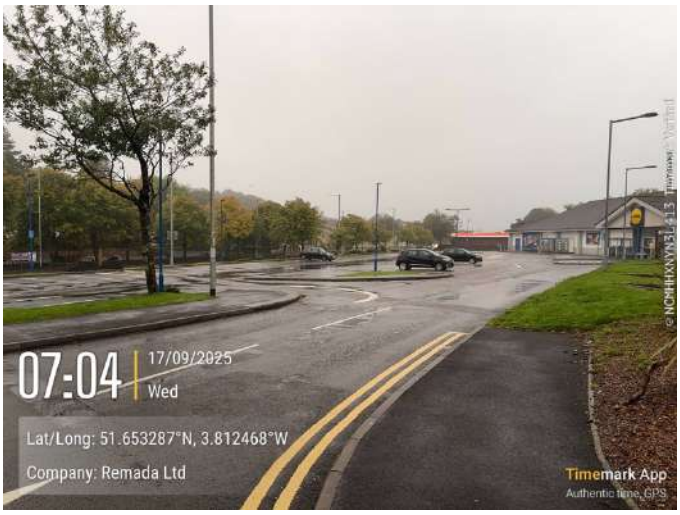

**Photo 1:** View towards the south-west from the Lidl store entrance off School Road.

**Photo 2:** View south-westwards from similar vantage point to Photo 1, with the Lidl store in the background and the former 'Vitality Health & Fitness' unit on the right.

**Photo 3:** Eastern façade of the former Vitality Health & Fitness' and 'Poundstretcher' units in the north-western area of the site.

**Photo 4:** Northern façade of the former Vitality Health & Fitness' and 'Poundstretcher' units.

**Photo 5:** View southwards across the eastern façade of the former Vitality Health & Fitness' and 'Poundstretcher' units and associated car park.

**Photo 6:** View south-eastwards showing the off-site Cryddan Brook beyond School Street, flowing towards the north.

**Photo 7:** View northwards showing the eastern façade of the former Vitality Health & Fitness' and 'Poundstretcher' units, showing the level change compared to the adjacent Lidl store.

**Photo 8:** Western façade of the eastern façade of the former Vitality Health & Fitness' and 'Poundstretcher' units, complete with concrete surfaced delivery area.

**Photo 9:** View southwards along the western façade of the Lidl store area, showing the delivery bay area between the store building and Network Rail's boundary fence.

**Photo 10:** Southern façade of the Lidl store building.

**Photo 11:** View northwards across the eastern façade of the Lidl store.

**Photo 12:** Electricity sub-station present in the eastern corner of the site.

# 5. PRELIMINARY RISK ASSESSMENT

## 5.1 Introduction

A Preliminary Risk Assessment (PRA) has been completed for the site. This PRA identifies the potential sources, pathways, and receptors for the site, in order to assess the potential risks posed by identified potential sources to human health and / or controlled waters receptors. When required, the viability of the Source-Pathway-Receptor pollutant linkage must be evaluated further to determine whether an actual risk is present.

## 5.2 Potential Sources

*On-site Historical*

- Marshland (ground gas)
- Japan Works
- Melin Crythan Works / Tinplate Works / Melyn Works (Sheet & Tinplate)
- Railway lines and sidings
- Unspecified tank.
- Coal Yard
- Infilled / culverted Cryddan Brook

*On-site Current*

- Operational Lidl store and car parking
- Former 'Vitality Health & Fitness' and 'Poundstretcher' units and car parking.
- Electricity Sub-Station

*Off-site Historical*

- Residential properties
- Tramway
- Smithy
- Coal Yard
- Engineering works
- Large scale site clearance
- Electricity Sub-Station

*Off-site Current*

- Residential properties
- Railway line
- Fuel Filling Station

## 5.3 Potential Contaminants of Concern (PCOCs)

- Metals
- Asbestos (associated with demolition and redevelopment of the existing site).
- Total petroleum hydrocarbons (TPH)
- Polycyclic aromatic hydrocarbons (PAH).
- Ground gases (carbon dioxide and methane)
- Radon gas

The electricity sub-station identified in the eastern area of the site dates from between 1993 and 1995. Its installation post-dates the international agreement in 1986 banning the use of polychlorinated biphenyls (PCBs). Consequently, PCBs are not considered to be a PCOC on-site.

The southern area of the site was historically occupied by a Japan Works. The technique of japanning involved the decorative painting of metalwork (typically tinplate) with lacquer and varnishes. Consequently volatile and semi-volatile organic carbons (VOCs and SVOCs) associated with this technique are considered to be PCOCs.

### 5.4 Potential Receptors

*Human Health*

- On-site Lidl store staff.
- Construction workers.
- On-site general public and visiting staff (such as contractors, including those conducting excavation works).
- Neighbouring residents

*Controlled Waters*

- Secondary (Undifferentiated) Aquifer in Superficial Deposits
- Secondary (A) Aquifer in Superficial Deposits
- Secondary (A) Aquifer in bedrock
- Cryddan Brook.

### 5.5 Preliminary Conceptual Model

The Preliminary Conceptual Site Model of the site has been prepared and illustrates the potentially active pollutant linkages. A pollutant linkage is present only when a source, pathway and receptor exist together.

- A **source** is a substance that has potential to cause harm or adversely affect human health, water resources or the wider environment.
- A **pathway** is the route or means by which a source of contamination can migrate resulting in exposure to a receptor.
- A **receptor** is something that could be adversely affected by a contaminant such as human health, an ecological system, animals or crops, buildings or controlled waters.

The Preliminary Conceptual Site Model is presented in **Table 1**.

| Potential Source Areas | Potential Contaminant of Concern | Pathways | Potential Receptor | Exposure Route (Human unless otherwise stated) | Potential Identified Linkage (unmitigated) | Findings of Ground investigation | Risk (Un-mitigated) | Proposed Remediation (Mitigation) Measures | Residual Risk Estimation |
|---|---|---|---|---|---|---|---|---|---|
| **On-site Sources**<br>• Marshland<br>• Japan Works<br>• Melin Crythan Works / Tinplate Works / Melyn Works (Sheet & Tinplate)<br>• Railway lines and sidings<br>• Unspecified tank.<br>• Coal Yard<br>• Infilled / culverted Cryddan Brook<br>• Lidl store, former retail units and associated car park.<br>• Electricity Sub-station<br>***Off-site Sources***<br>• Residential properties<br>• Tramway<br>• Smithy<br>• Coal Yard<br>• Various Works<br>• Railway line & sidinga<br>• Fuel Filling Station | Asbestos / Metals As, Be, Cd, Cu, Cr (VI), Cr (III) Hg, Ni, Se, Va, Zn, Boron, TPH /PAH, VOCs and SVOCs. | Disturbance due to construction plant causing direct contact, dusts, vapours.<br>Direct Contact with occupants of the proposed development<br>Inhalation of fibres / vapours / gases by occupants of proposed development<br>Permeation of water supply pipework<br>Leachate | Occupants of the development / building fabric<br>Adjacent residents during construction<br>Secondary (A) & (Undifferentiated) Aquifers | • Direct Soil Ingestion | • No | N/A | N/A | N/A | N/A |
| | | | | • Indoor Dust ingestion | • Yes | To be assessed (TBA) | Potential risk | To be assessed (TBA) | To be assessed (TBA) |
| | | | | • Skin Contact with Soils | • Yes | As above | Potential risk | TBA | TBA |
| | | | | • Skin Contact with Dust | • Yes | As above | Potential risk | TBA | TBA |
| | | | | • Inhalation of Outdoor Dust | • Yes | As above | Potential risk | TBA | TBA |
| | | | | • Ingestion of home grown produce | • No | Commercial development devoid of gardens | None | N/A | None |
| | | | | • Inhalation of Outdoor Vapours | • Yes | As above | Potential risk | TBA | TBA |
| | | | | • Inhalation of Indoor Vapours | • Yes | As above | Potential risk | TBA | TBA |
| | | | | • Inhalation of ground gas | • Yes | As above | Potential risk | TBA | TBA |
| | | | | • Inhalation of radon gas | • No | Intermediate & Higher Probability Areas | Moderate risk | Full radon protection measures in new buildings | Low |
| | | | | • Ingestion via permeated water supply pipework | • Yes | TBA | Potential risk | TBA | TBA |
| | | | | • Direct contact with Secondary (A & Undifferentiated) Aquifers in Superficial Deposits | • Yes | As above | Potential risk | TBA | TBA |
| | | | | • In-direct contact with Secondary (A) Aquifer in bedrock | • Yes | As above | Potential risk | TBA | TBA |

**Table 1: Preliminary Conceptual Site Model**

*Direct contact with subsurface soil and/or groundwater during redevelopment works are not assessed as part of the CSM. It is considered that risks to workers will be managed as part of any the redevelopment works at the site through the application of health and safety procedures, where required.*

# 6. CONCLUSIONS & RECOMMENDATIONS

## 6.1 Conclusions

The study site occupies an irregular (but very broadly triangular) plot to the west of A474 Briton Ferry Road. The site comprises three distinct areas, with a Lidl store present in the south-western area, two defunct retail units in the north-western area, and associated car parking occupying the eastern half of the site. Access to the study site is from School Road on the eastern boundary.

The earliest available mapping of 1878 and 1881 indicates it to be predominantly occupied by marshland. A railway line associated with the adjacent (off-site) Melin Crythan Works encroaches into the northern margins of the site in an arc. A 'Japan Works' encroaches into the south-western boundary of the site, extending off-site towards the south-west and expanding to occupy the southern half of the site by 1889. The Cryddan Brook bisects the central area of the site and would continue to do so until 1995, when it is no longer shown. By 1919 the railway sidings have expanded into the central area of the site, with rationalisation of these occurring by 1952. Buildings associated with the Melin Crythan Works / Tin Plate Works were constructed in the eastern area of the site in 1882, with the works complex being redeveloped between 1952 and 1958 when a new elongated building was constructed in the north-eastern margins of the site.

Between 1980 and 1987, the majority of the buildings in the southern area of the site are no longer shown, with only a north-west to south-east orientated elongate building still present parallel to Cryddan Brook and still labelled as 'Melyn Works'. A 'tank' of unspecified contents is indicated to be present encroaching into the eastern boundary of the site. By 1989, the majority of the buildings have been removed from the entire site, with only one small rectangular structure remaining adjacent to the eastern boundary. The area to the north of Cryddan Brook was labelled as a Coal Yard. The existing Lidl store building appears to have been constructed between 1993 and 1995, with its associated car park occupying the southern and eastern areas of the site. The Electricity Sub-Station adjacent to the eastern corner first appears in 1995, whilst the two now-defunct retail units in the north-western quadrant appear between the mapping of 1999 and Opus' investigation on-site in 2016.

Published geological maps record that the site is underlain by undivided deposits of Landscaped Ground and superficial Tidal Flat Deposits. The bedrock directly underlying the site is formed of the Hughes Member, for which the parent unit is the Pennant Sandstone Formation.

Information obtained during Opus' intrusive investigation in the northern area of the site in 2016 recorded granular Made Ground to a maximum depth of 4.7m bgl, underlain by very soft grey CLAY. Historic BGS trial pit records in the eastern and north-eastern area of the site dating from 1994 recorded Made Ground to a maximum depth of 2.0m bgl, underlain by very clayey fine SAND to the base of a pit at 3.0m bgl.

The site is located within an area which 'might be' affected by coal mining activity and is located within a Mining Remediation Authority designated Coal Mining Reporting Area, although it is not located within a Development High Risk Area. Consequently, it is recommended that Remada's previous Coal Mining Risk Assessment is updated the reflect the findings of this Phase 1 report.

The site is located in both an Intermediate Probability Radon Area (3 to 5% of homes are estimated to be at or above the Action Level) and a Higher Probability Radon Area (10 to 30% of homes are estimated to be at or above the Action Level). Consequently, full radon protection measures are necessary in the proposed new development

## 6.2 Recommendations

Environmental

The desk study has identified a number of on-site and off-site potential sources of contamination that would require further investigation. The following is recommended:

- Investigation of the lateral and vertical extent of made ground/fill beneath the proposed store footprint.
- Collection of soil and groundwater samples from the areas identified above for contaminants of concern; and
- Ground gas monitoring.

In accordance with CIRIA C665 the monitoring period should comprise not less than four visits for a proposed commercial development and should cover the "worst case" scenario which would occur during falling atmospheric pressure and, in particular, weather conditions such as rainfall and frost.

Geotechnical

It is recommended that a ground investigation is undertaken to enable preliminary foundation design.

## STUDY LIMITATIONS

**IMPORTANT**. This section should be read before reliance is placed on any of the information, opinions, advice, recommendations or conclusions contained in this report.

1. This report has been prepared by Remada, Ltd with all reasonable skill, care and diligence within the terms of the Appointment and with the resources and manpower agreed with (the 'Client'). Remada does not accept responsibility for any matters outside the agreed scope.

2. This report has been prepared for the sole benefit of the Client unless agreed otherwise in writing.

3. Unless stated otherwise, no consultations with authorities or funders or other interested third parties have been carried out. Remada is unable to give categorical assurance that the findings will be accepted by these third parties as such bodies may have published, more stringent objectives. Further work may be required by these parties.

4. All work carried out in preparing this report has used, and is based on, Remada' professional knowledge and understanding of current relevant legislation. Changes in legislation or regulatory guidance may cause the opinion or advice contained in this report to become inappropriate or incorrect. In giving opinions and advice pending changes in legislation, of which Remada is aware, have been considered. Following delivery of the report Remada has no obligation to advise the Client or any other party of such changes or their repercussions.

5. This report is only valid when used in its entirety. Any information or advice included in the report should not be relied upon until considered in the context of the whole report.

6. Whilst this report and the opinions made are to the best of Remada' belief, Remada cannot guarantee the accuracy or completeness of any information provided by third parties.

7. This report has been prepared based on the information reasonably available during the project programme. All information relevant to the scope may not have received.

8. This report refers, within the limitations stated, to the condition of the site at the time of the inspections. No warranty is given as to the possibility of changes in the condition of the site since the time of the investigation.

9. The content of this report represents the professional opinion of experienced environmental consultants. Remada does not provide specialist legal or other professional advice. The advice of other professionals may be required.

10. Where intrusive investigation techniques have been employed they have been designed to provide a reasonable level of assurance on the conditions. Given the discrete nature of sampling, no investigation technique is capable of identifying all conditions present in all areas. In some cases the investigation is further limited by site operations, underground obstructions and above ground structures. Unless otherwise stated, areas beyond the boundary of the site have not been investigated.

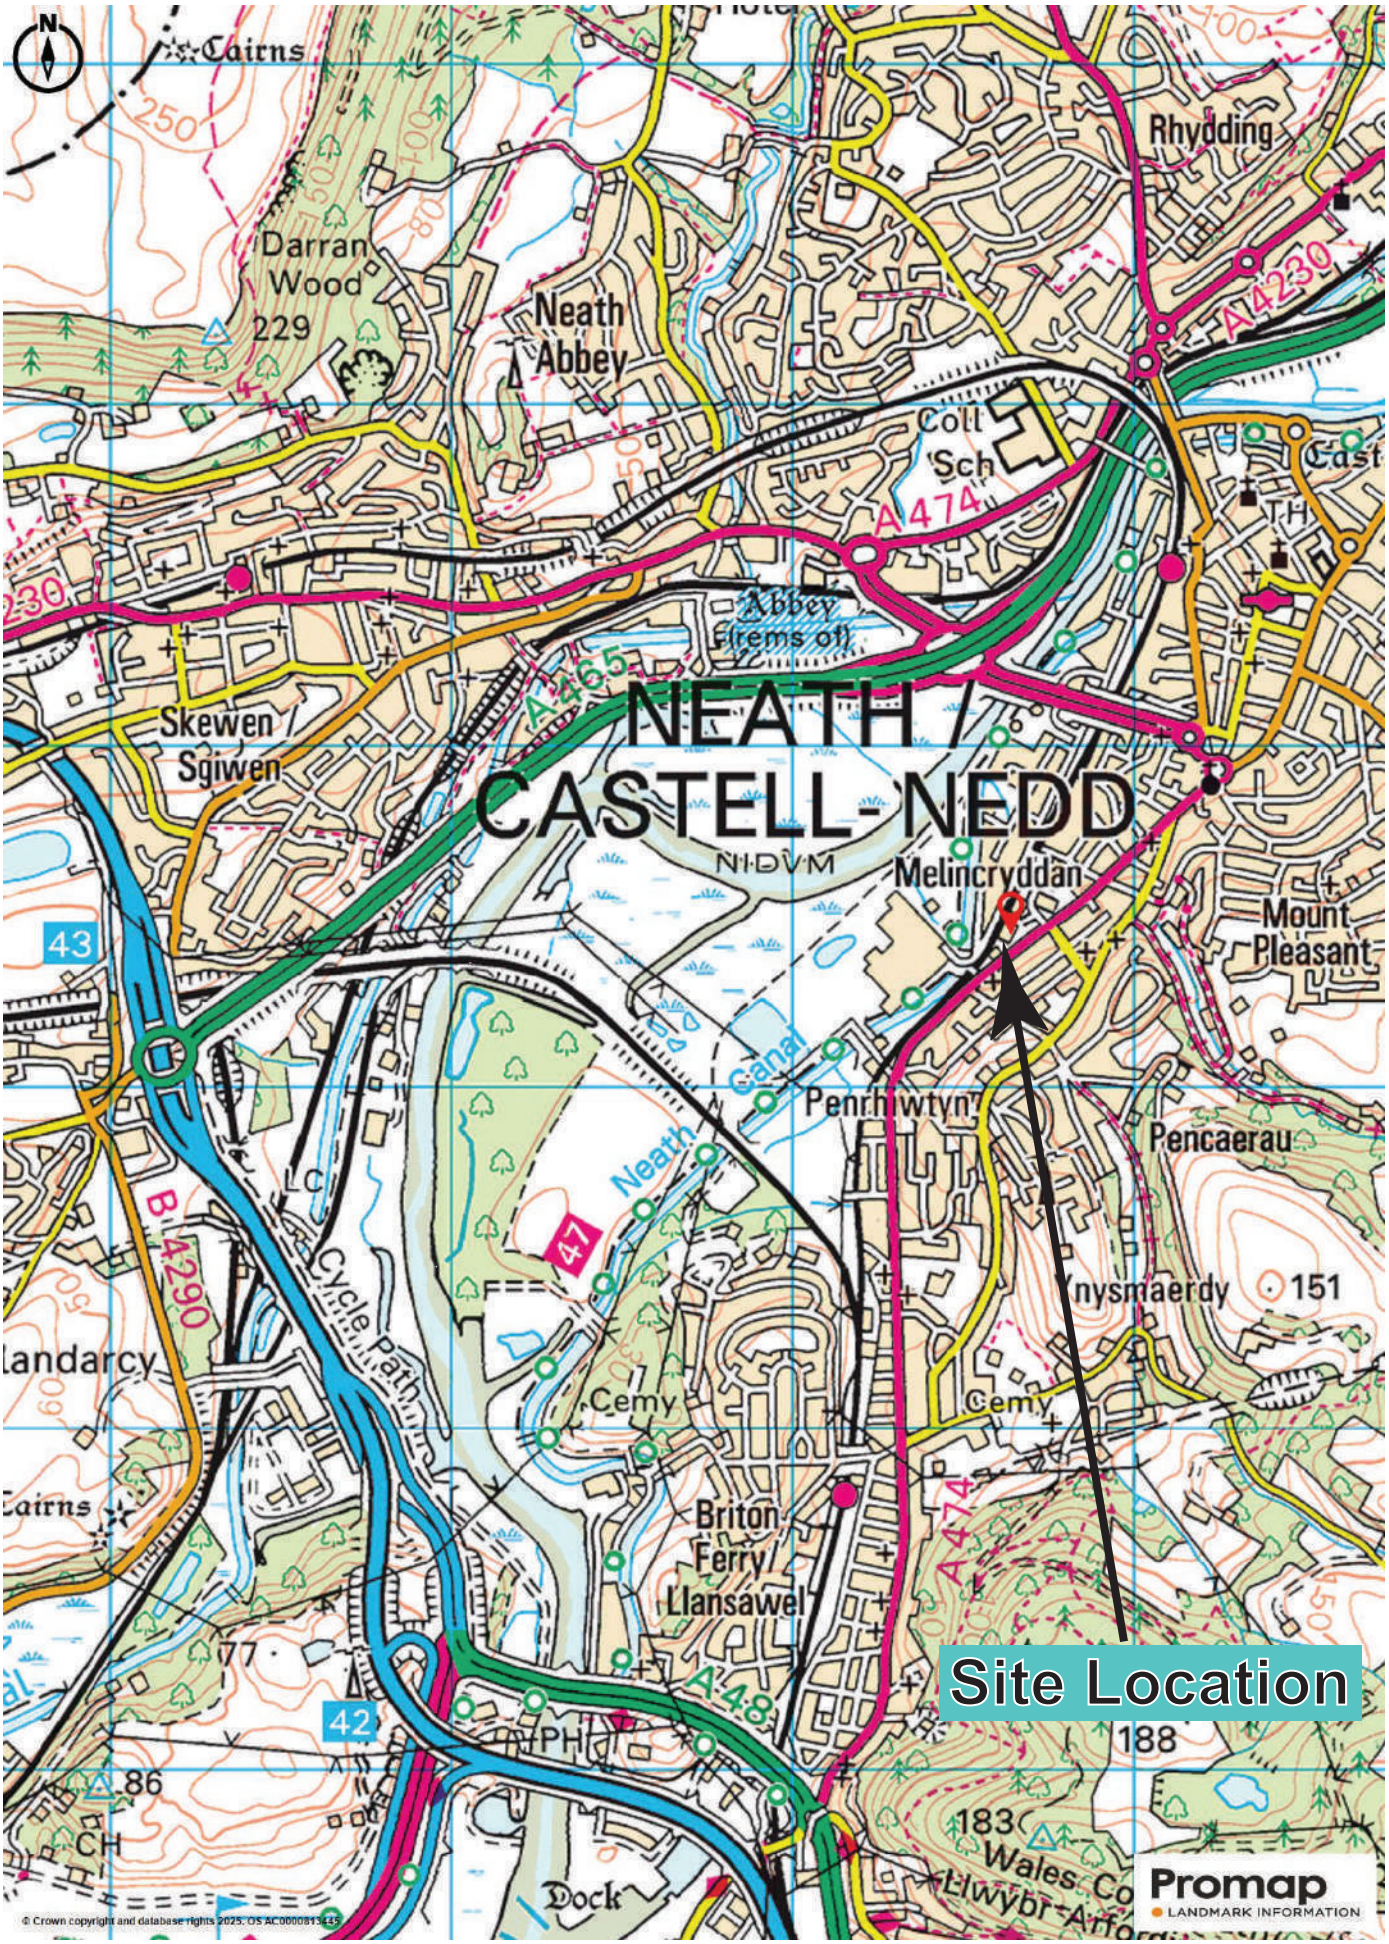

11. If below ground intrusive investigations have been conducted as part of the scope, service tracing for safe location of exploratory holes has been carried out. The location of underground services shown on any drawing in this report has been determined by visual observations and electromagnetic techniques. No guarantee can be given that all services have been identified. Additional services, structures or other below ground obstructions, not indicated on the drawing, may be present on site.

12. Unless otherwise stated the report provides no comment on the nature of building materials, operational integrity of the facility or on any regulatory compliance issues.

13. Unless otherwise stated, samples from the site (soil, groundwater, building fabric or other samples) have NOT been analysed or assessed for waste classification purposes.

# Russian Military Mapping Legends

## 1:5,000 and 1:10,000 mapping

a. Not drawn to scale b. Drawn to scale

- Government and Administrative Buildings
- Military and Industrial Buildings
- Military and Communication Areas
- Subway Entrance
- Fireproof Building
- Prominent Fireproof Building
- Non-fireproof Building
- Non-fireproof Building (non-dwelling)
- Factory, mill, and flour mill, with chimneys
- Factory, mill, and flour mill, without chimneys
- Power Station, drawn to scale
- Hydroelectric Power Station
- Radio Station, drawn to scale
- Telephone Station, drawn to scale
- Abandoned Open-pit Mine or Quarry
- Open-pit Salt Mine
- Pit
- Oil Deposit or Well
- Oil Seepage
- Tailings Pile
- Fuel Storage Tanks
- Natural Gas Tank
- Bench Mark
- Drill Hole
- Burial Mound
- Triangulation Point on Burial Mound
- Single-track Railroad
- Double-track Railroad and Station Building
- Coniferous Forest
- Deciduous Forest
- Mixed Forest
- Lawns
- Citrus Orchard
- Wet Ground
- Scattered Vegetation

243,8 — Values for prominent elevations

186.0 — Numbers for spot elevations, depth soundings, contour lines, etc.

0,2 — Velocity of the current, width of river bed, depth of river

Fractional terms: length and capacity of bridges; depth of fords and condition of the river bottom; height of forest and the diameter of trees

LANDMARK INFORMATION GROUP®

## Glamorganshire

## Published 1884

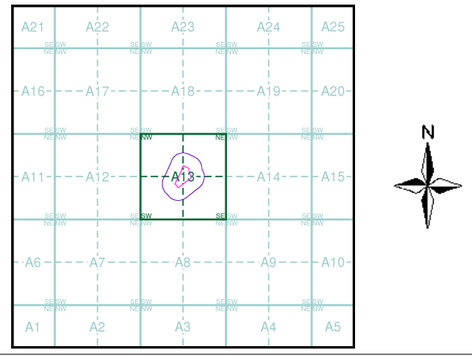

## Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## Historical Aerial Photography

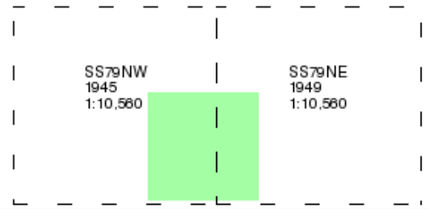

### Published 1945 - 1949

### Source map scale - 1:10,560

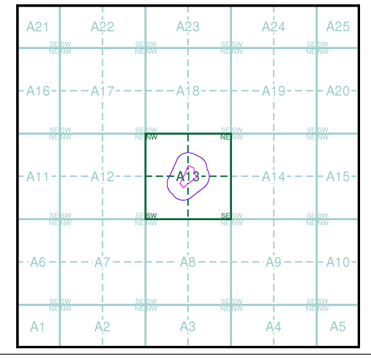

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

## Swansea

## Published 1976

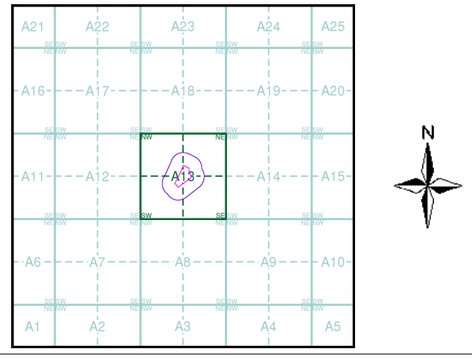

## Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

## Ordnance Survey Plan

### Published 1980 - 1983

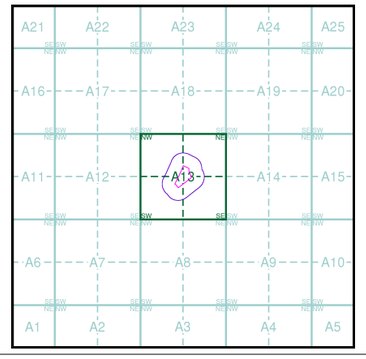

### Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## 10k Raster Mapping

## Published 1999

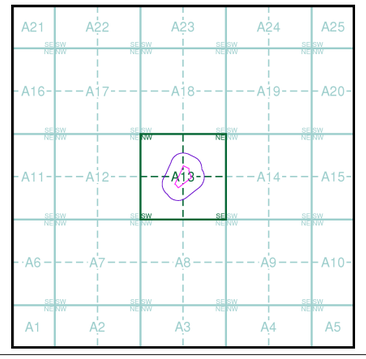

## Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

## VectorMap Local

**Published 2025**

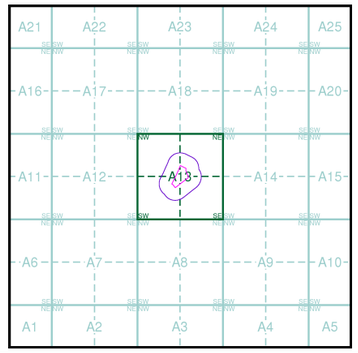

**Source map scale - 1:10,000**

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

## Glamorganshire

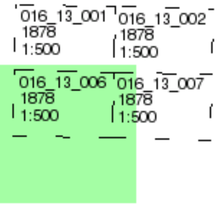

## Published 1878

## Source map scale - 1:500

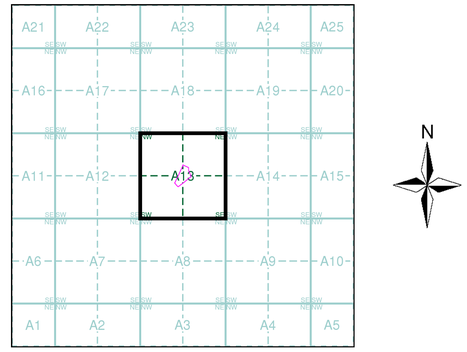

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

## Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

## Large-Scale National Grid Data

**Published 1993**

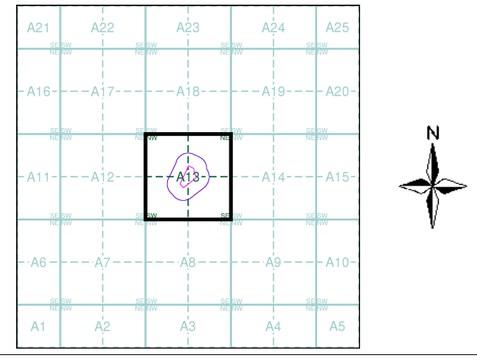

**Source map scale - 1:1,250**

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

## Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.
The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

## Geology 1:50,000 Maps Coverage

**Map ID:** 1

LANDMARK INFORMATION GROUP®

## Artificial Ground and Landslip

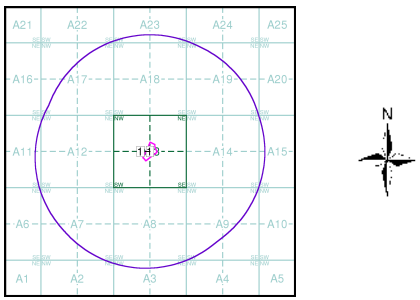

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

LANDMARK INFORMATION GROUP®

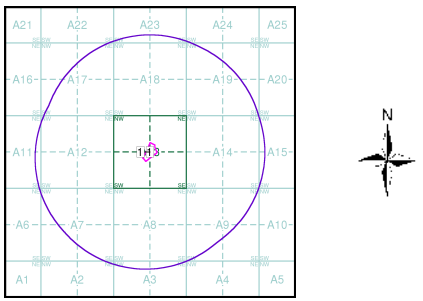

## Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

# Envirocheck®

LANDMARK INFORMATION GROUP®

## Bedrock and Faults

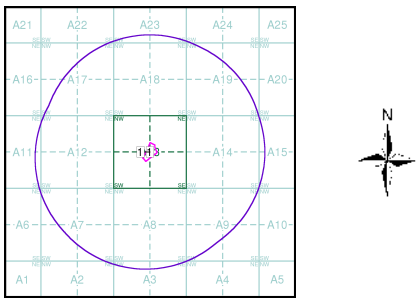

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

## Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

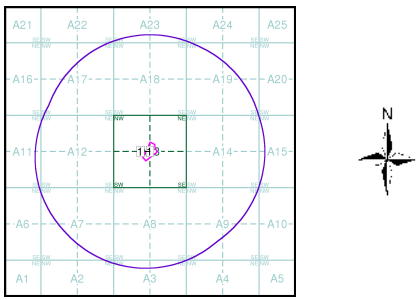

## Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

**Introduction**

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

**Ove Arup Copyright Notice**

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

**Stantec Copyright Notice**

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

**Radon Potential dataset Copyright Notice**

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

# Section 1 – Mining activity and geology

### Past underground mining
No past mining recorded.

### Probable unrecorded shallow workings
None.

### Spine roadways at shallow depth
No spine roadway recorded at shallow depth.

### Mine entries

| Entry type | Reference | Grid reference | Treatment description | Mineral | Conveyancing details |
|---|---|---|---|---|---|
| Adit | 274196-009 | 274725 196378 | | Coal | |

### Abandoned mine plan catalogue numbers
The following abandoned mine plan catalogue numbers intersect with some, or all, of the enquiry boundary:

| | | |
|---|---|---|
| SWR1671 | SWR2654 | PO0 |
| SW1916 | | |

**Please contact us on 0345 762 6848** to determine the exact abandoned mine plans you require based on your needs.

### Outcrops

| Seam name | Mineral | Seam workable | Distance to outcrop (m) | Direction to outcrop | Bearing of outcrop |
|---|---|---|---|---|---|
| WESTERNMOOR | Coal | Yes | Within | N/A | 136 |

### Geological faults, fissures and breaklines
No faults, fissures or breaklines recorded.

### Opencast mines
None recorded within 500 metres of the enquiry boundary.

### Coal Authority managed tips
None recorded within 500 metres of the enquiry boundary.

Copyright © 2022 The Coal Authority

# Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

### Site investigations
None recorded within 50 metres of the enquiry boundary.

### Remediated sites
None recorded within 50 metres of the enquiry boundary.

### Coal mining subsidence
The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

### Mine gas
None recorded within 500 metres of the enquiry boundary.

### Mine water treatment schemes
None recorded within 500 metres of the enquiry boundary.

Copyright © 2022 The Coal Authority

# Section 3 – Licensing and future mining activity

### Future underground mining
None recorded.

### Coal mining licensing
None recorded within 200 metres of the enquiry boundary.

### Court orders
None recorded.

### Section 46 notices
No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

### Withdrawal of support notices
The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

### Payments to owners of former copyhold land
The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Copyright © 2022 The Coal Authority

# Section 4 – Further information

Based on the responses in this report, no further information has been highlighted.

Copyright © 2022 The Coal Authority

# Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk.**

### Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

### Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

### Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

### Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

### Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

### Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

### Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Copyright © 2022 The Coal Authority

### Opencast mines
Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

### Coal Authority managed tips
Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

### Site investigations
Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

### Remediated sites
Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

### Coal mining subsidence
Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

### Mine gas
Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission.

Copyright © 2022 The Coal Authority

### Mine water treatment schemes
Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

### Future underground mining
Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

### Coal mining licensing
Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

### Court orders
Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

### Section 46 notices
Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

### Withdrawal of support notices
Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

### Payment to owners of former copyhold land
Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.

# APPENDIX E

## Zetica UXO Risk Mapping

# UNEXPLODED BOMB RISK MAP

**SITE LOCATION**

Map Centre: 274672,196488

This map principally indicates a hazard from Unexploded Bombs (UXB) due to WWII bombardment. Other sources of Unexploded Ordnance (UXO) may be present. It should be noted that this map does not represent UXO risk and should not be reported as such when reproduced.

**LEGEND**

- **High:** Areas indicated as having a bombing density of 50 bombs per 1000acre or higher.
- **Moderate:** Areas indicated as having a bombing density of 15 to 49 bombs per 1000acre.
- **Low:** Areas indicated as having 15 bombs per 1000acre or less.

**Miltary** | **Industry** | **UXO find** | **Other**
**Transport** | **Docks** | **Luftwaffe targets**
**Utilities** | **Bombing decoy** | **Airfields**

## How to use your Unexploded Bomb (UXB) risk map?

This map indicates the potential for UXBs to be present because of World War Two (WWII) bombing. It can be incorporated into a technical report, such as a Phase 1 Desk Study, or similar document as an indication of the potential for UXO encounter on a Site. Other sources of UXO may also be indicated, although note that these are not comprehensive and more detailed research is required to confirm their presence.

## What if my Site is in a moderate or high density area?

We typically recommend that a detailed UXO desk study and risk assessment is undertaken for sites in an area with a moderate or high bombing density.
Additionally, if your site is in close proximity to a strategic target, military establishment, airfield or bombing decoy, then additional detailed research is recommended.

## If my site is in a low risk area, do I need to do anything?

If both the map and other research confirm that there is a low potential for UXO to be present on your site, then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

If you are unsure whether other sources of UXO may be present, you can request one of our pre-desk study assessments (PDSA) by emailing a site boundary and location to pdsa@zetica.com.

**You should never plan site work or undertake a risk assessment using these maps alone. More detail is required, to include an assessment of the likelihood of a source of UXO hazard from other military activity not reflected on these maps.**

## If I have any questions, who do I contact?

**tel:** +44 (0) 1993 886682 **email:** uxo@zetica.com **web:** www.zeticauxo.com

**The information in this UXB risk map is derived from a range of sources and should be used with the accompanying notes on our website.**

**Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgement. The copyright remains with Zetica Ltd.**
