

Green Infrastructure Statement:

Minor Development

Site Address: Tonna RFC, Mount Pleasant, Tonna SA11 3HX

Proposed Development: Replacement of existing floodlight bulbs to energy efficient bulbs

Site description: The top rugby pitch at Tonna RFC has 6 floodlight pylons each holding 2 lamps. See plan. The remainder of the site comprises the lower playing surface, Clubhouse and car parking which are unaffected.

Surrounding Area description: The site is primarily bounded by woodland and pastureland. The nearest residential property is 65m from the closest pylon and will be unaffected by the proposal as shown on the Lux Dispersement Plan

Development Impacts:

The application is for the replacement of bulbs to the existing floodlight pylons. The attached Light Spillage Plan and details of Lux Levels together with the Manufactures' Specifications are attached to this application.

Biodiversity Enhancements Proposed

The new bulbs are more directional thus creating less light spillage to the woodland to the south of the playing field and improving the nesting habitat for creatures present.

As part of the wider ground improvements at the Club the bank to the south has been improved and will be replanted as found to be necessary.

Daffodil bulbs have been planted around the oak tree to the north-west of the Club house.

Three bat boxes will be erected at eaves height, one to each of the north-west elevation, the north-east elevation and the south-east elevation.

Conclusion.

It is considered that subject to the above the proposed development would maintain biodiversity. Thus, ensuring that any adverse environmental effects are avoided

Signed

Ieuan Jones
