Premium Welsh Douglas Fir Cladding

Douglas fir cladding, known for its strength, natural beauty, and dimensional stability, is a popular choice for both interior and exterior applications. This highly versatile timber performs exceptionally well in the UK climate, offering impressive resistance to decay and wear, even in exposed conditions. With its warm reddish-brown hues and striking grain patterns, Douglas fir cladding brings a distinctive aesthetic that suits both modern and traditional building designs.

At The Larch Cladding Company, we supply kiln-dried Douglas fir cladding to improve stability and reduce movement over time. Drying the timber also improves its workability and makes it suitable for a wide range of architectural applications. We offer Douglas fir in a variety of cladding profiles including [tongue and groove](#), [shiplap](#), [feather edge](#), [rainscreen](#), and [square edge](#), each one tailored to suit different design requirements and performance needs. Our square edge Douglas fir is especially popular for clean-lined, contemporary projects, while our tongue and groove options are perfect for creating seamless, weather-resistant finishes.

As with our [British larch Cladding](#), we supply Douglas fir cladding in two clear grades to suit various projects and budgets. Our Grade A Douglas fir is selected for its clean, knot-minimal appearance, making it ideal for high-spec architectural work where visual finish matters. Grade B Douglas fir, with its more rustic character and natural knots, offers a more cost-effective alternative without compromising on durability or sustainability. This grading ensures that whatever the scale of your project, there's a Douglas fir option to match your aesthetic and performance goals.

Douglas fir's dimensional stability and strength have made it a go-to choice for architects and joiners across the UK. It accepts treatments and finishes well, though many clients opt to leave it untreated to allow it to naturally weather to a silvery grey patina. If you'd prefer to preserve the original tones, it can also be oiled or stained to maintain colour over time. This flexibility makes it suitable for a wide

range of uses, from cladding homes and garden buildings to creating warm, inviting interior feature walls.

All of our Douglas fir is sourced responsibly, with FSC® (FSC-C134890) certified timber available upon request. We are proud to support sustainable forestry while offering UK-wide supply and bespoke cutting services to make your project easier from the outset. Whether you're an architect, builder, or homeowner, our high-quality Douglas fir cladding provides a sustainable, stylish, and long-lasting timber solution. If you're looking for Douglas fir cladding in the UK, you can rely on The Larch Cladding Company to deliver timber that combines strength, character, and environmental responsibility.

Feather Edge Cladding

Feather edge timber from The Larch Cladding Company offers a versatile and durable solution for your cladding needs. Our high-quality feather edge cladding is designed to provide both aesthetic appeal and long-lasting performance for any project.

Feather Edge Boards | Feather Edge Timber

Feather edge timber, also known as feather edge boards, is a popular choice for exterior cladding due to its overlapping design, which provides excellent weather resistance and a classic, rustic appearance. We provide high quality feather edge timber to ensure that our feather edge cladding not only enhances the look of your property but also withstands the elements, providing reliable protection and insulation.

Our feather edge boards come in a variety of sizes and finishes, allowing for flexibility in design and application. Whether you're renovating a traditional cottage or constructing a modern home, our feather edge timber can be tailored to suit your specific aesthetic and functional requirements.
