Ynys Park Applications - P2025/0086 and P2025/0169

Dear Jessica

In response to LA Ecologists observations and comments regarding the use and timings of the Floodlighting at the 3G facility, the Football Club now has a better understanding and awareness of the bat activity in the area and has agreed to meet with the restrictions to the lighting of the 3G Pitch as advised by the Ecologist.

To achieve the reduced levels of lighting, it is proposed to that 1 brick per lighting column will be switched off permanently. The lux plan provided indicates the lower lux levels, attained as a result of the modifications.

The lighting contractor has been paid to complete the modifications to the floodlighting units as noted and they will mobilise as a priority.

The improved weather conditions will allow for a lift unit to be used for safe working access, providing the opportunity to complete the task.

The restrictions to the floodlighting, as advised are as follows;

Between April and September/ early October the lights cannot be used after 7.30pm

Between mid-October and March, the lighting can be used in the evenings, in accordance with condition 5 of the planning consent

Currently the floodlighting to the 3G pitch is not in use and is switched off.

Regards

Peter
