

Designed to replicate traditional timber sash windows whilst incorporating the benefits of uPVC. Our sash windows operate like traditional box sash windows – both the top and bottom sashes slide up and down as standard, and most of them tilt inwards for easy cleaning. They are also double glazed and “A” energy rated. All our sliding sash windows are made-to-measure and delivered to your property ‘ready to fit’.

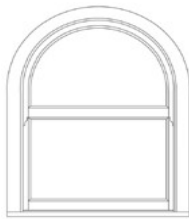

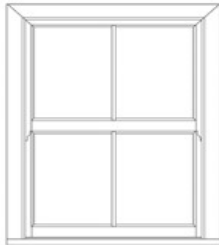

Our sliding sash windows are manufactured using the SPECTUS uPVC profile designed to truly emulate traditional heritage frames. Featuring woolpile strips that provide an excellent seal against weather, air, and debris infiltration. ‘Low E’ glass together with a warm edge spacer bar provide exceptional heat retention, and a superior ‘A’ energy rating. An innovative dedicated weather bar adds another level of defence against rainwater – an extra feature unique to this type of window. Designed with not only elegance and authenticity in mind, but security too. The sliding sash windows are multi-chambered and reinforced to prevent deflection through different climates.

Our vertical sliding sash windows ensure that your home retains its character and charm. You can choose from a wide range of styles (including the Georgian sash windows style) features and hardware options to complement your home.

- Custom made
- Low maintenance – no sanding or painting
- Easy clean facility
- Safe and secure
- Weather resistant
- Energy efficiency – A rated
- Authentic woodgrain effect available
- 10-year guarantee
- Made in UK, delivered nationwide

Our **Spectus** sliding sash windows can be manufactured to a style to suit your home. Below are a few examples of the different bar layouts available. Our windows come with equal sized top and bottom sashes (50/50 split) as standard, however we can manufacture other split ratios at your request (minimum transom drop of 350mm).

True Arch*

Our arched frames are made at a designated profile bending facility equipped with high tech equipment for precision. The most typical arched shape we see is a true arch, in which the top section has been beautifully curved. Other arched window shapes include gothic arches where the two sides have been moderately curved and meet at the head creating a pointy top.
