1 Introduction

1.1 Acstro has been appointed by J G Hale Construction Ltd., on behalf of Pobl Group, to prepare a Transport Assessment to support an outline planning application for residential development (up to 139 dwellings) on land at Crymlyn Parc, Skewen. The site's general location is shown in Figure 1 below.

Figure 1 Location

1.2 This document considers the transport implications of the proposed development. It demonstrates that the site is in a sustainable location that is closely related to existing facilities and services and is accessible to pedestrians, cyclists and public transport users. It is also demonstrated that safe vehicular access to the site can be provided and adequate parking provision is made for the future occupiers and users of the site.

1.3 The content of this document has been revised following receipt of the Highway Authority's (HA) observations on the planning application that are dated 30th May 2025. The main revision is that the Transport Assessment reflects the HA's request that analysis of the impact of the development's traffic be based on week long traffic surveys at four junctions located within the study area.

1.4 The structure of the Transport Assessment is as follows:

- Section 2 describes the relevant planning policy context that is relevant in terms of transport issues;
- Section 3 describes the site's location, its proximity to services and facilities and its accessibility by all forms of transport.
- Section 4 describes the proposed development and its access arrangements. An estimate of the likely trip generation of the proposed development of the land is also provided.
- Section 5 provides a summary and conclusion.

2 Policy Context

Future Wales - The National Plan 2040

2.1 This is the national development framework that sets out the direction for development in Wales to 2040.

2.2 Policies 11 and 12 relate to national and regional connectivity, respectively. These seek to encourage longer-distance trips to be made by public transport, while also making longer journeys possible by electric vehicles. In urban areas, to support sustainable growth and regeneration, the priorities are improving and integrating active travel and public transport. In rural areas the priorities are supporting the uptake of ultra-low emission vehicles and diversifying and sustaining local bus services. Active travel must be an essential and integral component of all new developments.

2.3 Planning authorities must act to reduce levels of car parking in urban areas, including supporting car-free developments in accessible locations and developments with car parking spaces that allow them to be converted to other uses over time. Where car parking is provided for new non-residential development, planning authorities should seek a minimum of 10% of car parking spaces to have electric vehicle charging points.

Planning Policy Wales (12th Edition)

2.4 Planning Policy Wales (PPW) sets out the land use planning policies of the Welsh Government. The primary objective of PPW is to ensure that the planning system contributes towards the delivery of sustainable development and improves the social, economic, environmental and cultural well-being of Wales.

2.5 In terms of transport related policies paragraph 4.1.1 states that “the planning system should enable people to access jobs and services through shorter, more efficient and sustainable journeys, by walking, cycling and public transport”.

2.6 Paragraph 4.1.10 states that “the planning system has a key role to play in reducing the need to travel and supporting sustainable transport, by facilitating developments which:

- are sited in the right locations, where they can be easily accessed by sustainable modes of travel and without the need for a car;
- are designed in a way which integrates them with existing land uses and neighbourhoods; and
- make it possible for all short journeys within and beyond the development to be easily made by walking and cycling.”

2.7 PPW advocates a sustainable transport hierarchy for planning, the hierarchy being, from top to bottom:

- Walking and Cycling
- Public Transport
- Ultra Low Emission Vehicles
- Other Private Motor Vehicles

2.8 It is Welsh Government policy to require the use of a sustainable transport hierarchy in relation to new development, which prioritises walking, cycling and public transport ahead of the private motor vehicles.

2.9 The transport hierarchy recognises that Ultra Low Emission Vehicles (ULEV) also have an important role to play in the decarbonisation of transport, particularly in rural areas with limited public transport services. To this end the provision of ULEV charging points is encouraged within new developments.

2.10 PPW recommends (4.1.51) that "a design-led approach to the provision of car parking should be taken, which ensures an appropriate level of car parking is integrated in a way which does not dominate the development. Parking provision should be informed by the local context, including public transport accessibility, urban design principles and the objective of reducing reliance on the private car and supporting a modal shift to walking, cycling and public transport. Planning authorities must support schemes which keep parking levels down, especially off-street parking, when well designed".

Llwybr Newydd – The Wales Transport Strategy 2021

2.11 This document sets out the Welsh Government's vision for how the country's transport system can help deliver on a pathway to creating a more prosperous, green and equal society. It lists its priorities as being:

1. Bringing services to people in order to reduce the need to travel. To this end a target has been set that of 30% of the workforce works remotely on a regular basis.
2. Allow people and goods to move easily from door to door by accessible, sustainable and efficient transport services and infrastructure.
3. Encourage people to make the change to more sustainable transport.

2.12 Modal shift is at the heart of Llwybr Newydd. This means the proportion of trips made by sustainable modes increases and fewer trips are made by private cars.

2.13 The Welsh Government has set a target of 45% of journeys to be made by public transport, walking and cycling by 2040. This represents an increase of 13 percentage points on the estimated baseline (2021) mode share of 32%.

TAN18 Transportation

2.14 Planning Policy Wales Technical Advice Note 18 (TAN18) details the Welsh Government Government's policies in terms of transportation and repeats the general principles advocated in PPW i.e. that development is encouraged in sustainable, accessible, locations that will reduce the need to travel by car. Its aim is to promote an efficient and sustainable transport system and to counter the negative impacts associated with road traffic growth, for example increased air pollution, green house gases and congestion (2.1). It sees the integration of transport and land use planning as key (2.3) in achieving the Welsh Government Governments' sustainable development policy objectives by:

- promoting travel efficient settlement patterns;
- ensuring new development is located where there is good access by public transport, walking and cycling thereby minimizing the need for travel and fostering social inclusion;
- managing parking provision;
- ensuring that new development includes appropriate provision for pedestrians, cycling, public transport, and traffic management and parking/servicing;
- encouraging the location of development near other related uses to encourage multi-purpose trips; and

- ensuring that transport infrastructure necessary to serve new development allows existing transport networks to continue to perform their identified functions.

2.15 The needs of walkers and cyclists must be taken into consideration and the use of these most sustainable forms of transport encouraged in all developments (TAN18 Chapter 6). Similarly, all development should be accessible by public transport (Chapter 7).

The Active Travel (Wales) Act 2013

2.16 The Active Travel (Wales) Act 2013 is Welsh Government legislation aimed to support an increase in the level of walking and cycling in Wales; to encourage a shift in travel behaviour to active travel modes, and to facilitate the building of walking and cycling infrastructure.

2.17 The Active Travel (Wales) Act 2013 requires local authorities in Wales to produce maps of walking and cycling networks in their local area, known as Active Travel Network Maps (ATNMs). These maps are designed to show two main things:

- **Existing routes** – those current walking and cycling routes that already meet Welsh Government active travel standards, meaning they can be readily used for everyday journeys, and
- **Future routes** – new routes that the local authority proposes to create in the future, as well as current routes that are planned for improvement to bring them up to the standards.

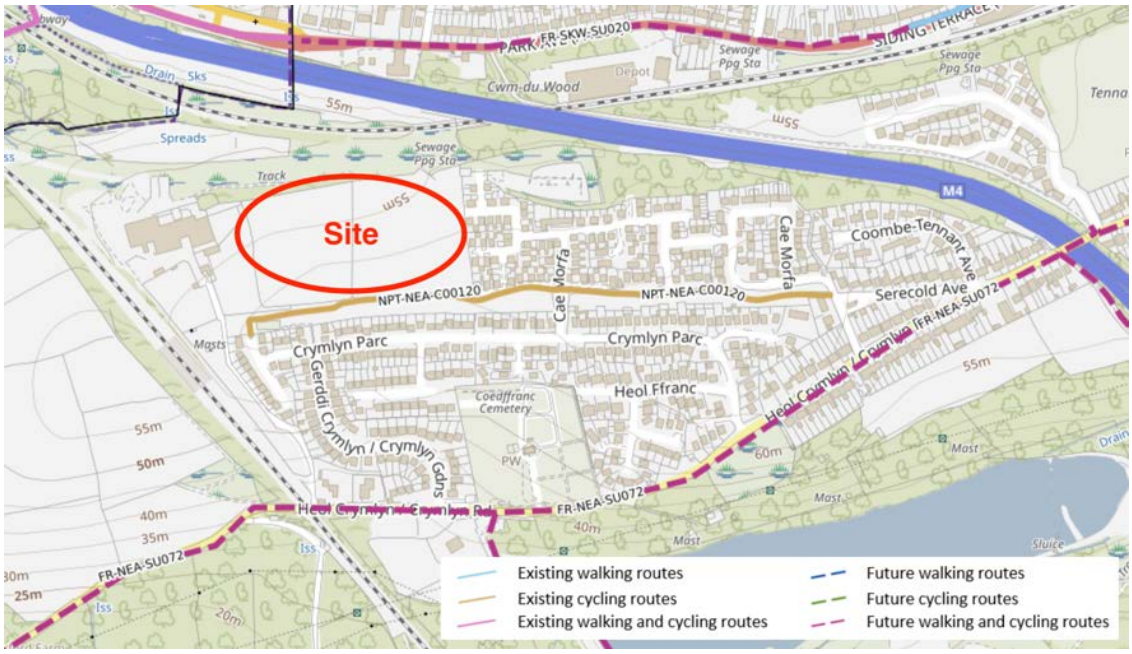

Figure 2 Extract from Active Travel Network Map (Source: DataMapWales)

2.18 There is an existing cycling route along the site's southern boundary (NPT-NEA-C00120) and a future walking and cycling route indicated along Crymlyn Road (FR-NEA-SU072).

Neath Port Talbot CBC Local Development Plan (2011 – 2026)

2.19 Policy SP20 relates to the transport network and, in terms of development proposals, requires that they be designed to provide safe and efficient access, promote sustainable transport an provide appropriate parking. Developments that have an unacceptable impact on highway safety will be restricted.

2.20 Policy TR2 relates to the design and access of new developments and is reproduced in full below.

- Development proposals will only be permitted where all of the following criteria, where relevant, are satisfied:

  1. The development does not compromise the safe, effective and efficient use of the highway network and does not have an adverse impact on highway safety or create unacceptable levels of traffic generation;
  2. Appropriate levels of parking and cycling facilities are provided and the access arrangements for the site allow for the safe manoeuvring of any service vehicles associated with the planned use;
  3. The development is accessible by a range of travel means, including public transport and safe cycle and pedestrian routes;
  4. Transport Assessments and Travel Plans are provided for developments that are likely to create significant traffic generation.

Supplementary Planning Guidance – Car Parking Standards (2016)

2.21 The Supplementary Planning Guidance (SPG) sets out the approach to be adopted in determining the appropriate level of parking provision within new development. The SPG is based on the CSS Wales – Wales Parking standards 2014, which sets out parking provision maxima based on the development type and location.

2.22 For residential development the car parking requirement is that one parking space per bedroom is required up to a maximum of 3 spaces per dwelling. One visitor parking space per 5 units is also required.

3 The Site

The Site

3.1 The site's location and surrounding transport infrastructure is shown in Figure 2.

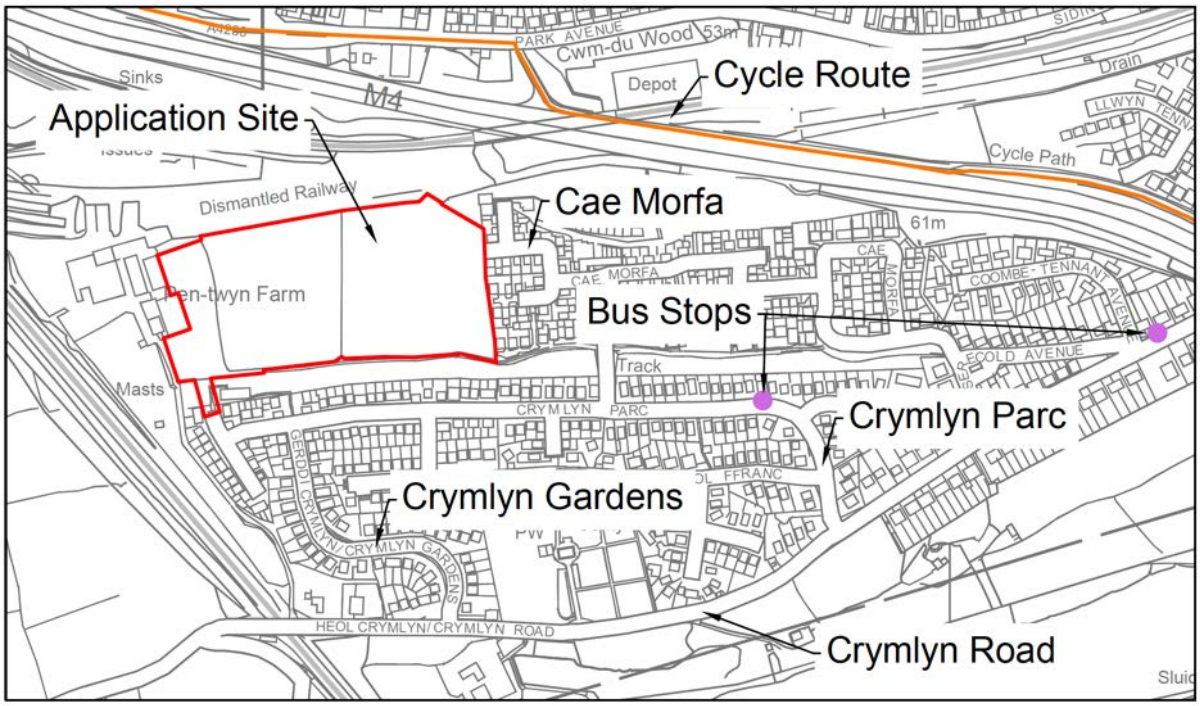

Figure 3 Site Context

3.2 The site is located to the north Crymlyn Parc and west of Cae Morfa, part of the Crymlyn Grove development. To the north of the site is the South Wales Main Line railway and the M4 motorway.

3.3 The site is between 1.5 to 2 km from Skewen town centre where a wide selection of services and facilities are available. A wider range of services can be accessed in Neath, some 5km to the east. Swansea city centre is approximately 9km to th south west.

Active Travel

3.4 Active travel is a term used to describe walking and cycling for purposeful journeys (also referred to as utility journeys) to a destination, or in combination with public transport. Whilst walking and cycling are in themselves healthy activities that are to be encouraged, it is when they displace car journeys that they deliver significant benefits. The Welsh Government's *Active Travel Act Guidance* (2021) suggests that many people will walk up to 2 miles (approximately 3km) or cycle up to 5 miles (approximately 8km) for utility journeys.

Mode	Less than 1 mile	Up to 2 miles	Up to 3 miles	Up to 4 miles	Up to 5 miles	Up to 7.5 miles	Up to 15 miles
	●	●	●	●	●	●	●

e-	●	●	●	●	●	●	●

Colour	Average active user likelihood
●	Many users likely to travel this distance for utility journeys
●	Some users likely to travel this distance for utility journeys
●	Few or no users likely to travel this distance for utility journeys

Figure 4 Typical Distance Range for Active Travel
(Source: Active Travel Guidance Table 4.1)

3.5 Figure 5 shows the areas that are within 2-miles of the application site where utility journeys to and from the site may be viable on foot.

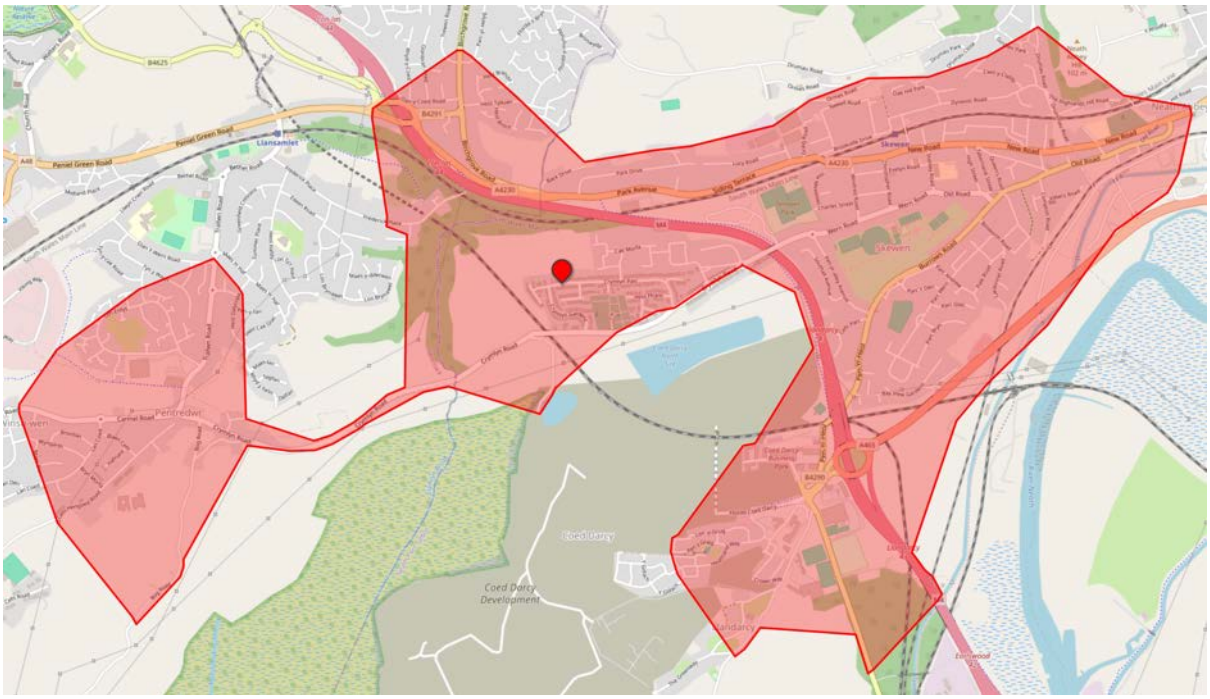

Figure 5 2-Mile Walk Catchment

3.6 Figure 6 shows the areas within a 5-mile catchment area where cycling may be a viable form of travel to and from the site.

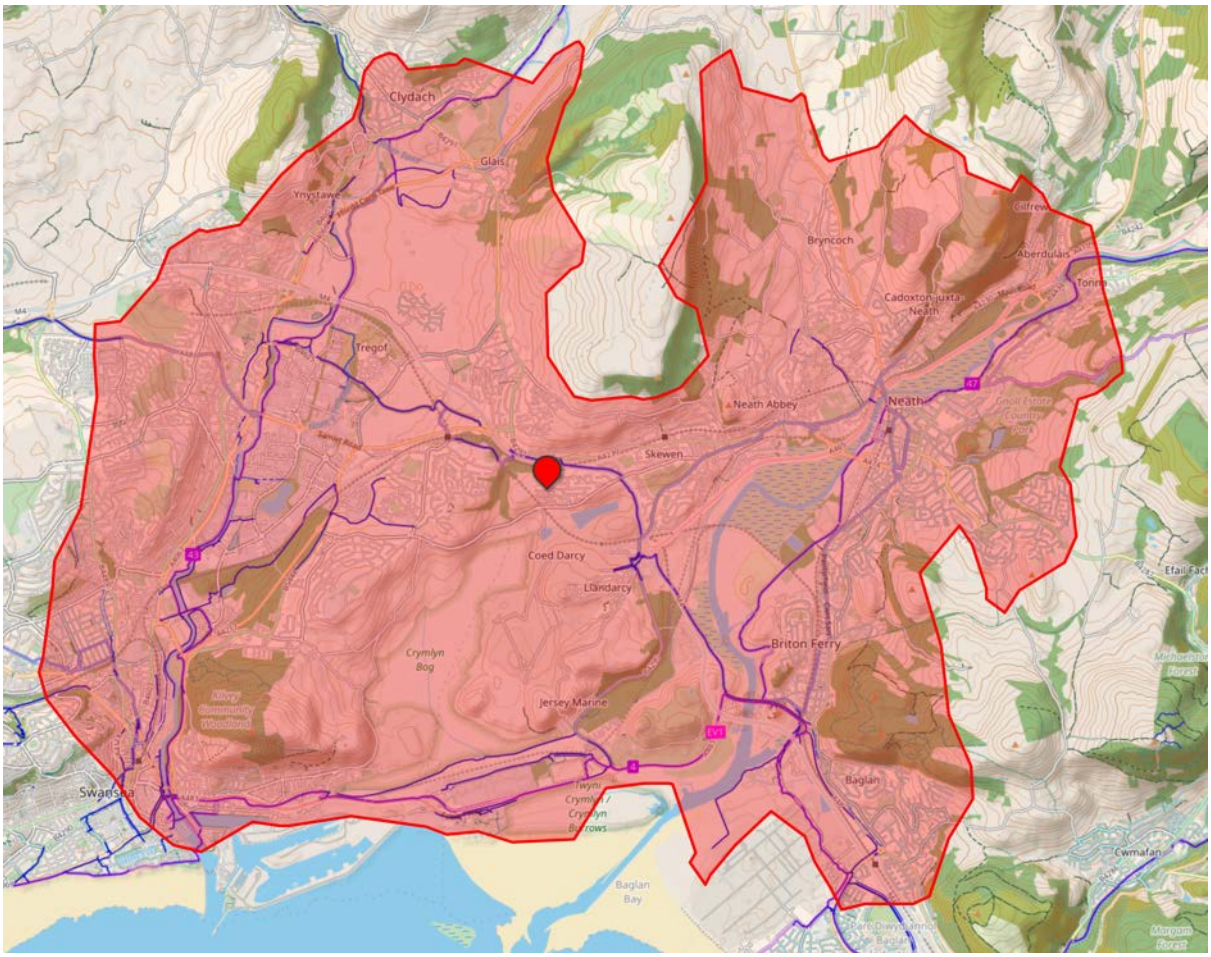

Figure 6 5-Mile Cycle Catchment

3.7 Neath Port Talbot Council in partnership with The City & County of Swansea has created the Swansea Bay Cycle Network Routes and tube map. The aim of the scheme is to encourage commuters to cycle in preference to traveling by car. Each route is assigned a colour and cyclists will see the tube map colours replicated on signs along the cycle paths to assist with navigation.

3.8 The Orange Cycle Route passes within around 500m of the site and runs parallel with the M4. It links with the Blue Route that provides a route to Neath town centre to the east and Jersey Marine to the south.

3.9 National Cycle Network Routes 4 and 47 can be reached via the Orange and Blue Routes and provide high quality, largely traffic free, cycle routes to Swansea, Neath, Port Talbot and beyond.

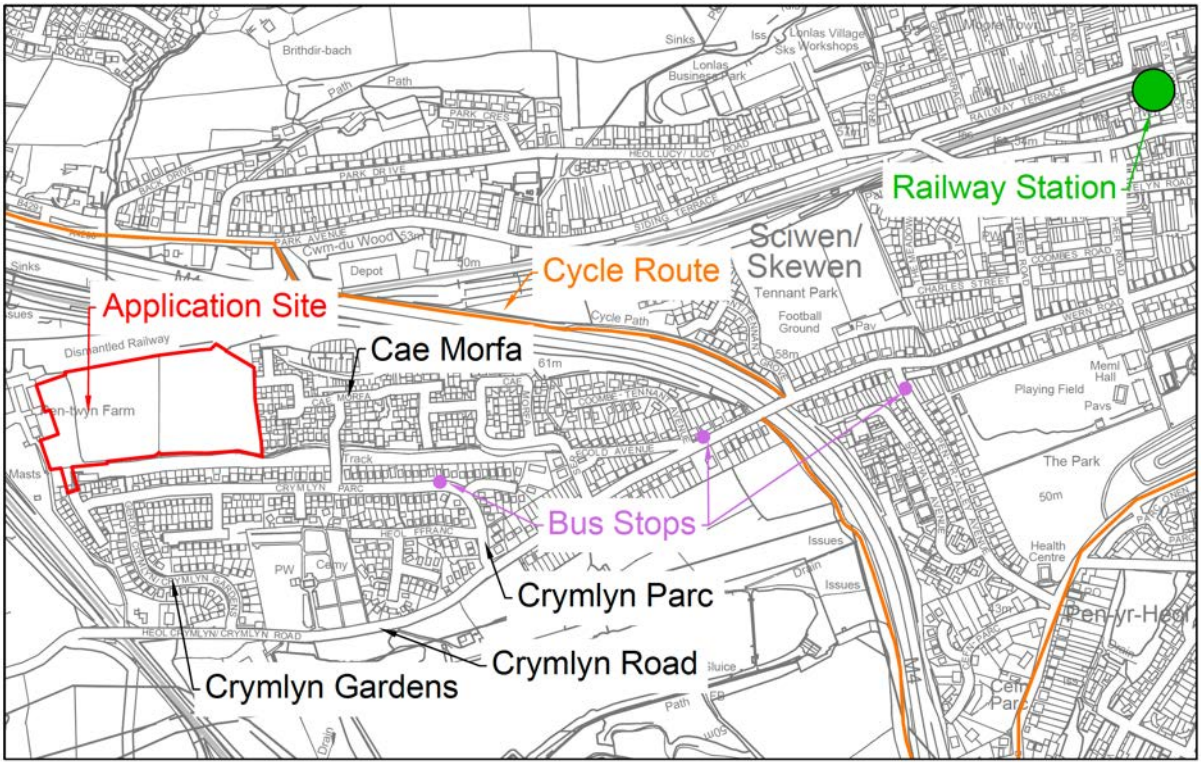

Figure 7 Cycle Routes & Public Transport

Public Transport Network

3.10 There are a number of bus stops in the vicinity of the site. There are two within the Crymlyn Parc development and one Crymlyn Road. The bus stops provide access to service number 155 (Neath – Llandarcy Village via Skewen) which provides 5 daily services in each direction on Tuesdays and Thursdays.

3.11 The No. 38 (Swansea – Neath) service runs hourly, 7 days a week, and can be accessed from the bus stops located near the Crymlyn Road / Pen yr Alley Avenue junction, some 1200m / 16 minutes walk from the application site.

3.12 Skewen railway station is approximately 2km / 30 minutes walk from the site. Bus service 155 described above provides a convenient link between the development site and the railway station. Skewen railway station is on the South Wales mainline, which provides hourly services to Swansea and Cardiff.

3.13 Neath and Swansea stations also provide access to mainline services and can both be reached within a reasonable cycle journey.

Highway Network

3.14 The site will be accessed via Crymlyn Parc and Cae Morfa. These are modern estate roads whose layout comply with current design standards. Carriageway widths are generally 5.5m with 2m wide footways on both sides. Crymlyn Park and Cae Morfa are accessed by four junctions that link with Crymlyn Road. They are, from west to east, Crymlyn Gardens, Crymlyn Park and two Serecold Avenue junctions. Traffic leaving Crymlyn Park and Cae Morfa can only use the western of the two Serecold Avenue junctions as there is a no entry sign preventing departing traffic from approaching the eastern Serecold Avenue junction.

3.15 Crymlyn Road is an urban single carriageway road that varies in width (5.5m to 7.5m approximately) and is subject to a 20mph speed limit. To the west of the site, Crymlyn Road's character changes to a country lane, which eventually leads to Bonymaen.

3.16 To the east of the Crymlyn Gardens junction there are a series of traffic calming features along Crymlyn Road in the form of raised road humps. Travelling east, Crymlyn Road passes beneath the M4 and leads into Wern Road, which provides access to a centre of Skewen via a network of one-way streets.

3.17 To the north west of Skewen the A4230 provides a link to junction 44 of the M4. To the south of Skewen, Pen-yr Alley Avenue and the B4290 provides a link to junction 43 of the M4 and the A465 Heads of the Valleys Road.

3.18 A 7-day traffic speed and volume survey (ATC survey) was undertaken at two locations on Crymlyn Road, commencing 1st April 2025. One was located to the west of the Crymlyn Gardens junction and the other east of the Serecold Avenue junction. The survey data is provided in full in Appendix 1 and summarised below.

Appendix 1 Crymlyn Road Traffic Surveys

	West of Crymlyn Gdns.		East of Serecold Ave.	
	Westbound	Eastbound	Westbound	Eastbound
Weekday Average Daily Volume	1137	1185	2141	1592
Mean Speed	36mph	30mph	21mph	22mph
85th Percentile Speed	35mph	36mph	25mph	26mph

Table 1 Crymlyn Road Traffic Survey

3.19 The surveys show that traffic volume on Crymlyn Road is significantly higher to the east of the Serecold Avenue junction than it is to the west of the Crymlyn Gardens junction. This shows that the majority of traffic movement to and from Crymlyn Parc and Cae Morfa turns to and from the Skewen direction (east).

3.20 The figure below shows the variation in two-way traffic volume (from the survey located east of Serecold Avenue) over the course of the 7-day survey and shows that Tuesday and Wednesday were the busiest days of that week. Traffic flow on Saturday and Sunday is lower than on weekdays.

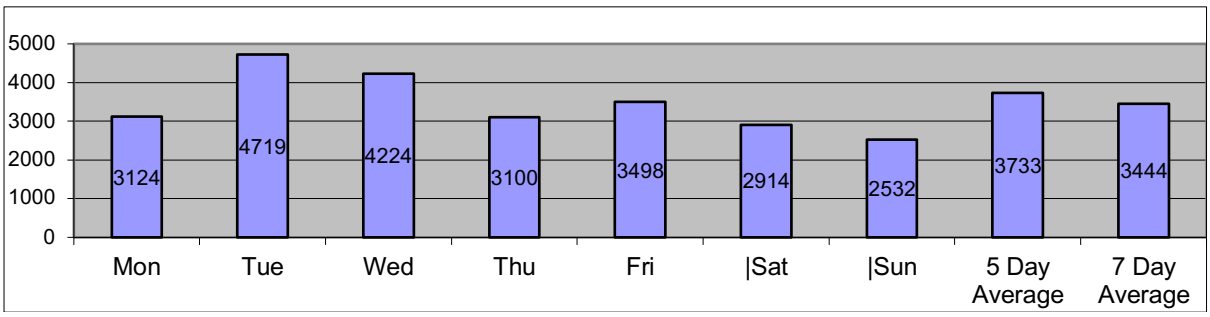

Figure 8 Crymlyn Road Two-Way Traffic Volume (w/c Tuesday 01/04/25)

3.21 A 24 hour, seven-day, turning count survey was undertaken at the four junctions that provide access to and from Crymlyn Road, beginning Thursday 11th September 2025. The survey data is included in full in Appendix 2.

Appendix 2 Crymlyn Road Junction Surveys

It is evident that Crymlyn Road is busier during weekdays and it is the weekday highway network peak hours of 8am to 9am (am peak) and 5pm to 6pm (pm peak) that will be most sensitive to any impacts associated with the proposed new development traffic. The traffic movements observed during those weekday peak hours are shown in the following figures.

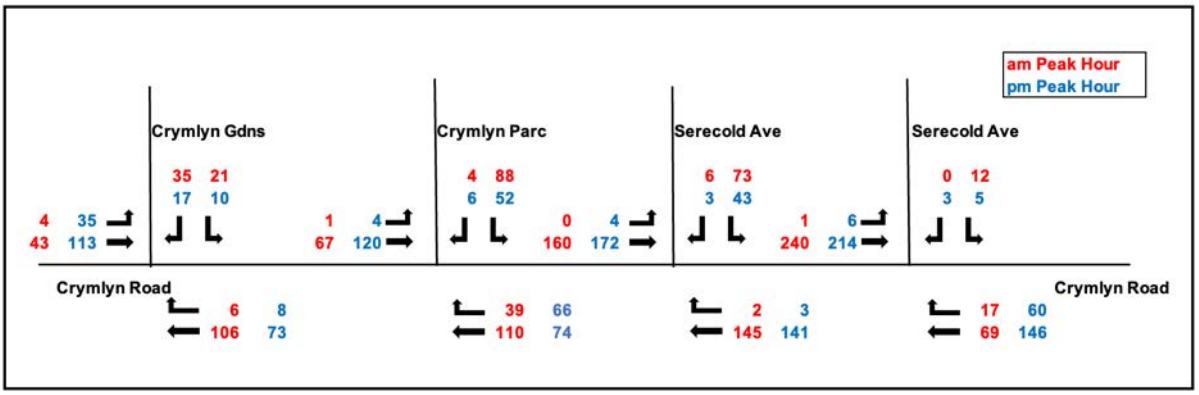

Figure 9 Observed Peak Hour Traffic Thursday 11th September 2025

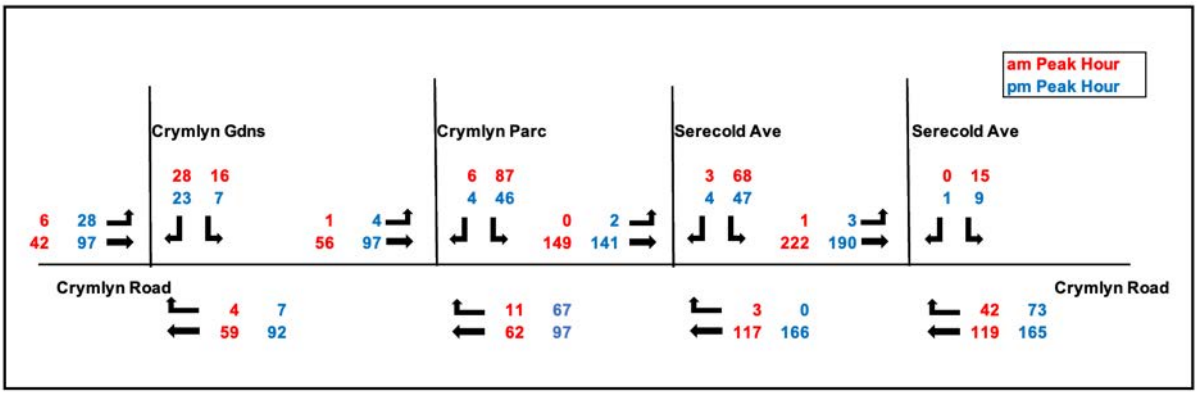

Figure 10 Observed Peak Hour Traffic Friday 12th September 2025

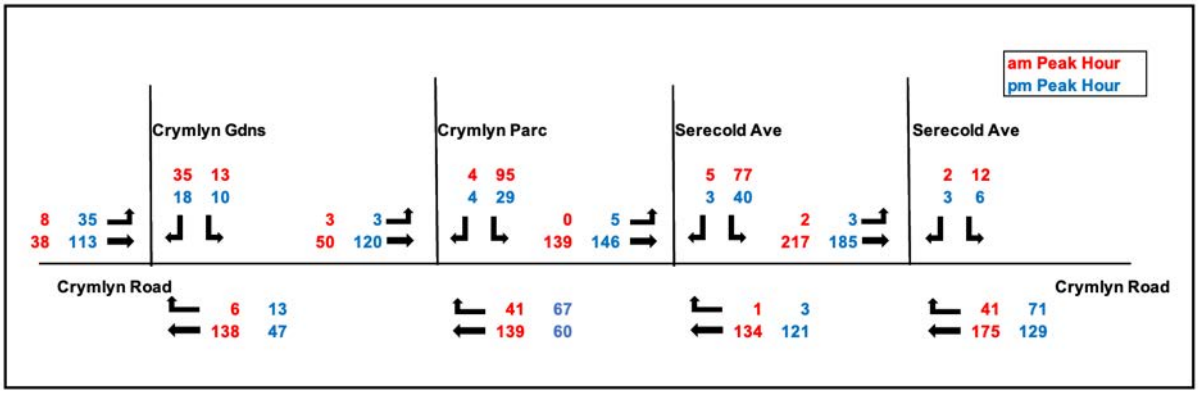

Figure 11 Observed Peak Hour Traffic Monday 15th September 2025

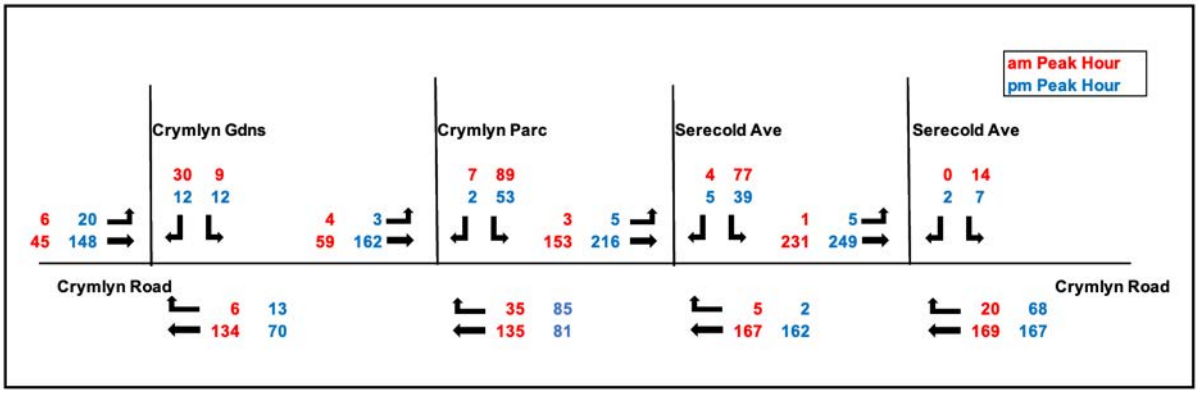

Figure 12 Observed Peak Hour Traffic Tuesday 16th September 2025

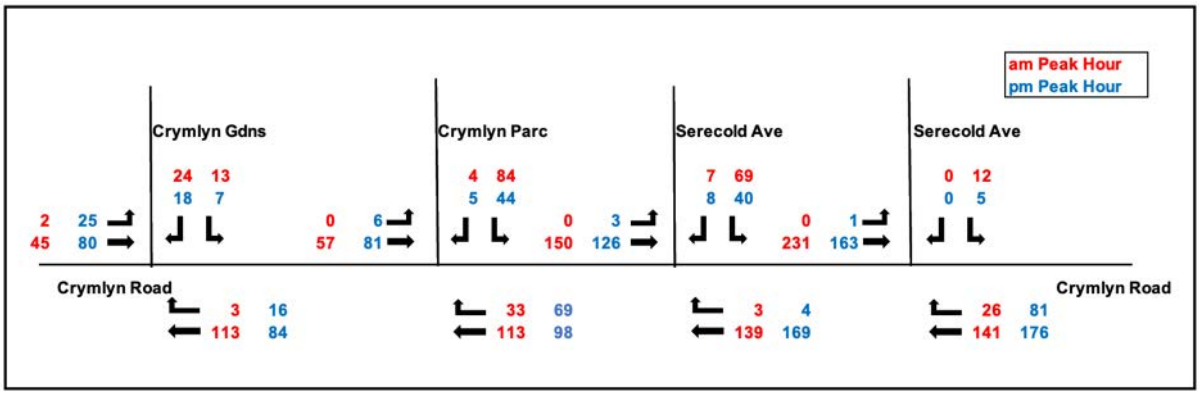

Figure 13 Observed Peak Hour Traffic Tuesday 17th September 2025

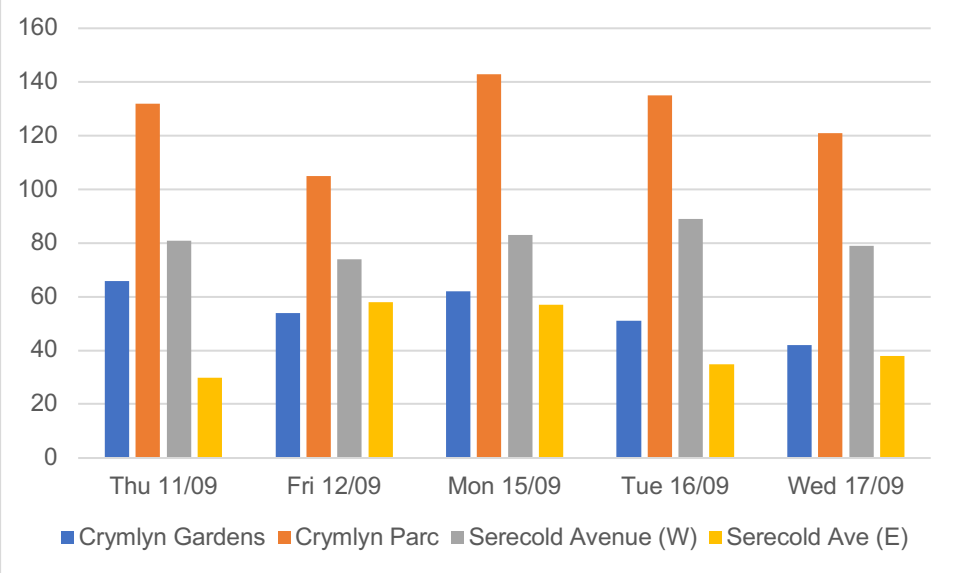

Figure 14 Observed Side Road Two Way Traffic Flow Variation (am Peak)

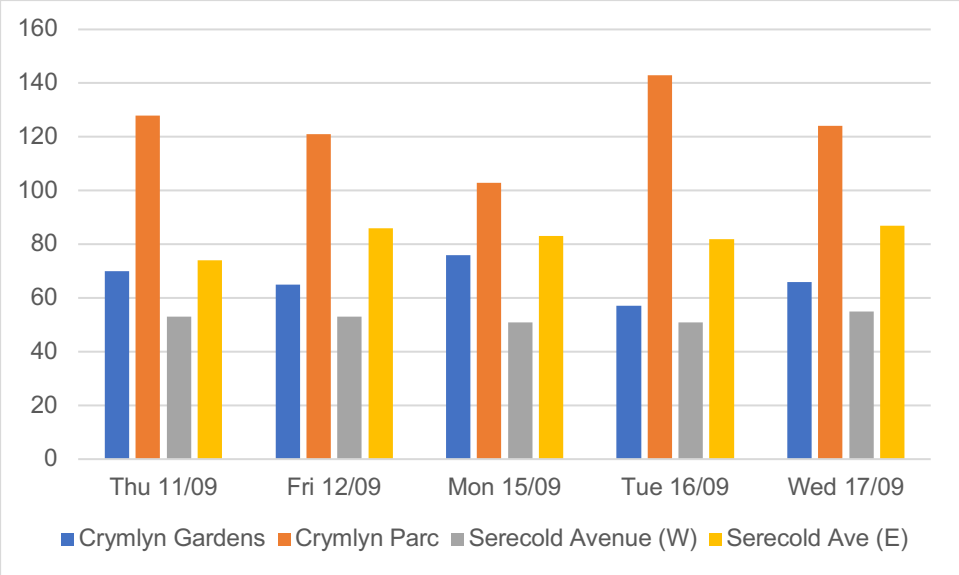

Figure 15 Observed Side Road Two Way Traffic Flow Variation (pm Peak)

3.22 The traffic flows to and from the Crymlyn Park and Cae Morfa residential area that use these four junctions are relatively stable throughout the course of the week. Peak hour flows were highest on Monday (am peak) and Tuesday (pm peak).

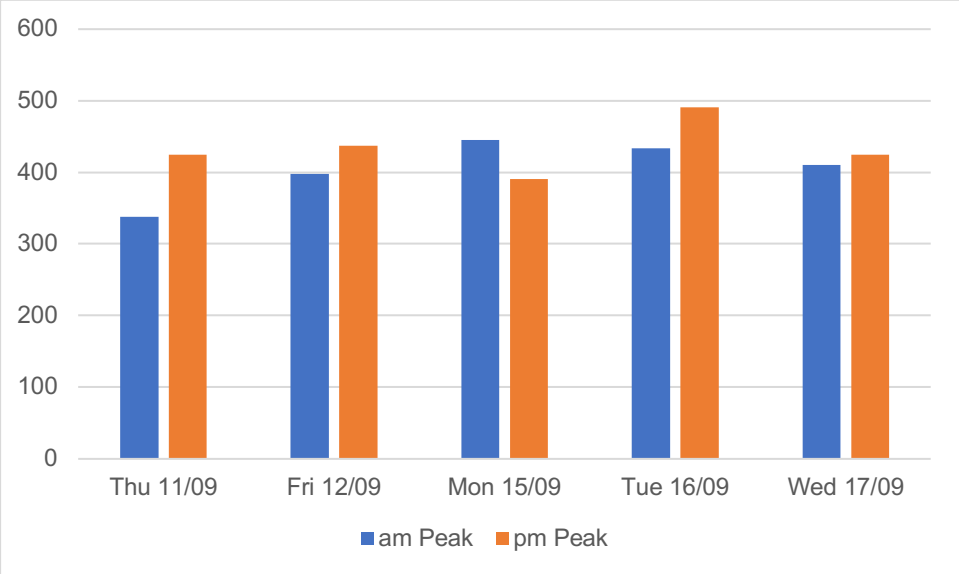

Figure 16 Observed Crymlyn Road (East of Serecold Ave.) Two Way Traffic Flow Variation

3.23 Peak hour traffic flow on Crymlyn Road was found to be highest on the Tuesday. This is consistent with the results of the April 2025 ATC survey described earlier.

3.24 A review of injury collision records for the area around the site has been undertaken for latest five-year period for which data is available (2019 – 2023 inclusive). There are no recorded injury collisions on Crymlyn Road nor any of its junctions that serve Crymlyn Parc or Cae Morfa. This indicates that the highway network that serves the site operates safely.

Figure 17 Injury Collision Records 2019 – 2023 (Source DfT / MAVRIC)

Summary

3.25 The site is in a sustainable and accessible location. The site is accessible to pedestrians, cyclists and public transport users. The site is located close to services and facilities has good public transport links. This increases the possibility that journeys generated by the development can be made by sustainable forms of transport. It is considered that the public highway from which the site will be accessed operates safely.

4 Proposed Development

4.1 The planning application is in outline for a development of up to 139 dwellings.

Figure 18 Illustrative Masterplan

4.2 There will be two main points of access to the site.

4.3 At the site's south western corner Crymlyn Parc will be extended northwards past the existing play area, with a 5.5m wide carriageway provided with a 2m wide footway on the eastern side that aligns with the pedestrian desire line to and from the western part of the site. A 1m wide footway is initially provided on the western side. South of plot No.1, there will be a road narrowing, acting as a traffic calming feature that breaks up what would otherwise be a long and straight section of estate road. Similar traffic calming features will be repeated throughout the development. North of the traffic calming feature near plot No. 1 there will be 2m footways on both sided of the road and these will continue throughout the development.

4.4 The second main access to the site is from Cae Morfa where the existing 5.5m wide carriageway and 2m wide footways will be extended into the development.

4.5 In addition to these two main points of access there will be additional pedestrian access point that link to the footpath that runs on an east-west alignment through the amenity land between the existing Crymlyn Parc properties and the proposed development.

4.6 The multiple points of access allow for a permeable site layout and minimise the need to provide turning areas.

4.7 Whilst the layout of the development is a reserved matter a number of plans are provided in Appendix 3 that that demonstrate the suitability of the illustrative layout in highway terms.

Appendix 3 Access Arrangements

4.8 The drawings demonstrate the position of pedestrian crossing points, the available visibility from internal junctions and forward visibility around bends. The layout has been designed to limit traffic speed to a no more than 20mph, with regular speed reducing features provided on straight sections of streets. Right angled bends are provided in order to slow traffic further and discourage through traffic. Forward visibility at bends is limited to 17m (suitable for a design speed of 15mph). This is considered reasonable considering the low speed that will be forced by the geometry of the right angled bends and aligns with guidance provided in 'Manual for Streets' (paragraph 7.4.4.) which states that reductions in forward visibility is one of the traffic-calming measures that can be employed to slow traffic on a continuous link. This approach has been employed successfully elsewhere; at the Coed Darcy development, for example.

Figure 19 Examples of Restricted Forward Visibility at Coed Darcy

4.9 Swept path analysis is provided to demonstrate that opposing vehicles can move through the development and that its layout can accommodate the Council's refuse collection vehicle.

Parking

4.10 Car and cycle parking provision will be determined at reserved matters stage but will accord with the Council's adopted Parking Standards of 1 space per bedroom but a maximum of 3 spaces per dwelling. Visitor parking spaces will be provided at 1 per 5 dwellings.

Trip Generation

4.11 The trip generation of the proposed development has been estimated by reference to the TRICS trip rate database.

4.12 Typical weekday peak-hour trip rates of developments of affordable homes have been obtained from the database. The TRICS output is provided in full as Appendix 2 and is summarised in the following tables.

Appendix 4 TRICS Trip Rate Data

Time Range	TRICS Trip Rate per Unit			Trip Generation – 139 Units		
	Arrivals	Departures	Total	Arrivals	Departures	Total
08:00-09:00	0.164	0.284	0.448	23	39	62
17:00-18:00	0.284	0.216	0.5	39	30	70

Table 2 Estimated Traffic Generation

4.13 The TRICS data suggests that the development has the potential to generate some 62 to 70 peak hour vehicle movements.

4.14 The site will be accessed from Crymlyn Parc and Crymlyn Grove and this dictates that traffic to and from the development can turn to and from Crymlyn Road from the Crymlyn Gardens, Crymlyn Parc and Serecold Avenue junctions.

4.15 It is considered, broadly, that the traffic generated by the properties in the western half of the site will use the access to the site from Crymlyn Parc and traffic generated by the remaining properties will use the access from Cae Morfa. A broadly even split therefore.

4.16 For the western half of the site, the most direct route to Crymlyn Road is via Crymlyn Gardens. For the eastern half of the site the distance between the site and Crymlyn Road differs little whether the Crymlyn Parc or Serecold Avenue junctions are used.

4.17 It is estimated therefore that the development's traffic will be split as follows:

Crymlyn Road / Crymlyn Gardens junction	50%
Crymlyn Road / Crymlyn Parc junction	25%
Crymlyn Road / Serecold Avenue junction	25%

Departing traffic using Serecold Avenue (west)

Arriving traffic using the first Serecold Avenue junction they arrive at

4.18 It is also estimated that approximately 80% of development traffic will turn to and from the east (Skewen direction) with 20% travelling to and from the west (Bonymaen direction). The resultant development traffic distribution is outlined in the following figure.

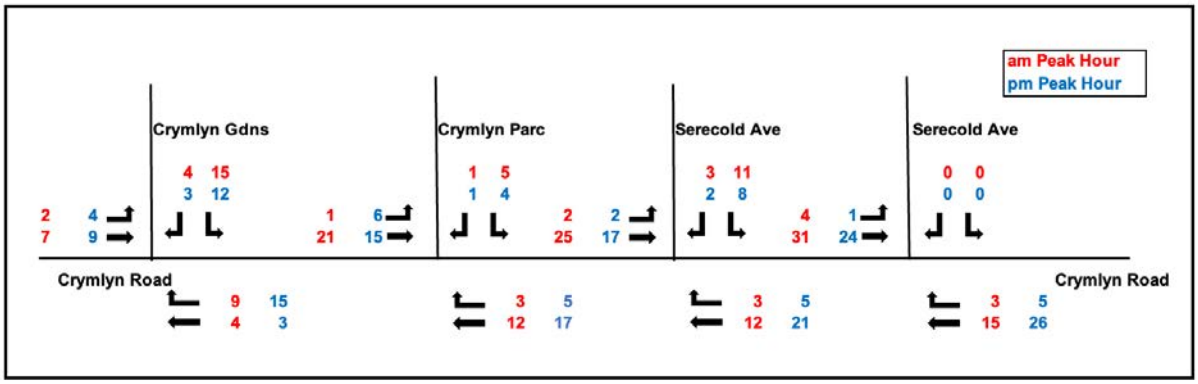

Figure 20 Development Trip Generation

5 Traffic Impact

5.1 Analysis of existing traffic movements at the four junctions that join Crymlyn Road has established that Crymlyn Road is busiest on a Tuesday. Tuesday also exhibits the busiest pm peak for movements to and from the side roads at this junction. Side road peak hour flows were found to be slightly busier on the Monday but this is balanced by lower major road flows on that day. On balance it is considered that the Tuesday peak hours flows place the greatest demand on these four junctions and the analysis of the impact of development traffic is therefore based on the Tuesday peaks.

5.2 For the purpose of assessing the impact of the development traffic, it is assumed that the proposed development will be completed and fully occupied within 10 years of this planning application i.e. by 2035.

5.3 A locally adjusted[1] growth factor of 1.1068, obtained from the DfT's TEMPRO software, has been applied to the observed traffic to allow for the growth in traffic between 2025 and 2035.

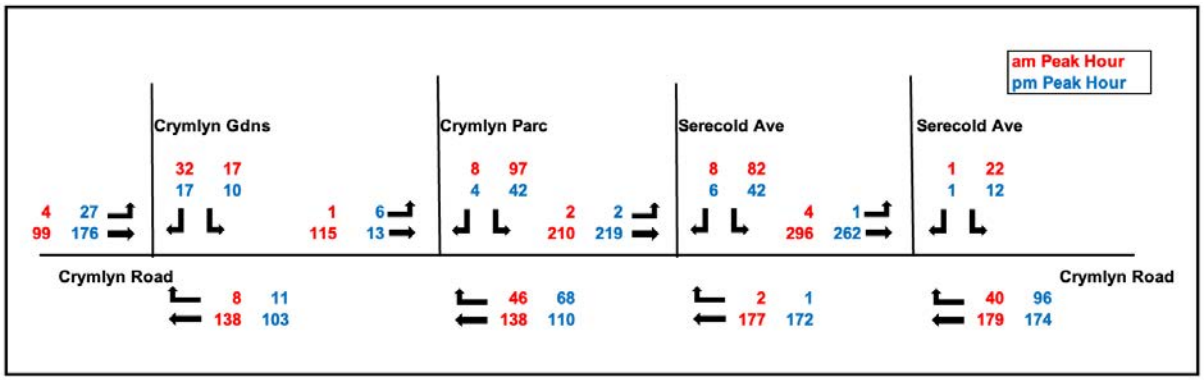

Figure 21 Observed Tuesday Peak Hour Flows Factored to 2035 (2035 Baseline)

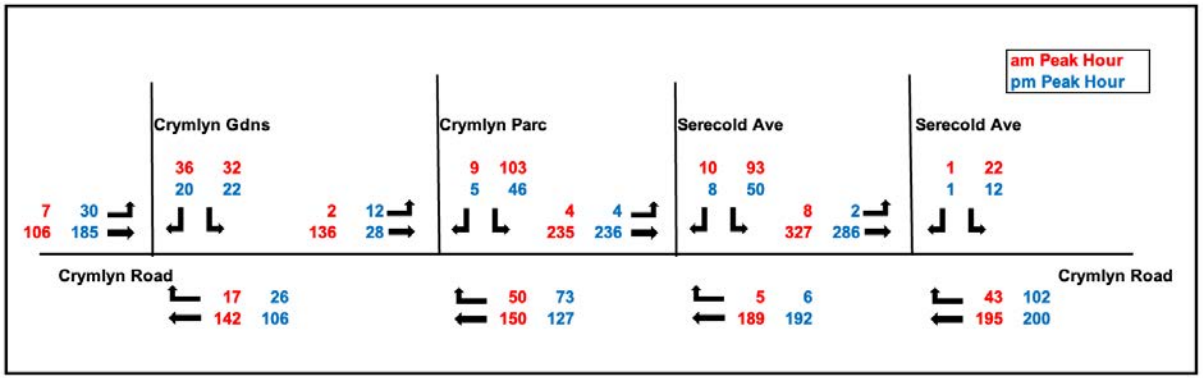

Figure 22 2035 Baseline Peak Hour Traffic with Development Traffic Added

[1] Skewen & Jersey Marine Middle Layer Super Output Area

Committed Development Traffic

5.4 The application of Tempro, locally adjusted, growth factors makes allowance for general traffic growth associated with Local Development Plan allocations. However, consideration has been given to the need to make allowance for specific development proposals that have been approved in the vicinity of the site that may influence baseline traffic conditions.

5.5 No approved developments that are likely to have a significant impact on traffic levels on Crymlyn Road have been identified. Particular consideration has been given to the Coed Darcy development that is located near junction 43 of the M4. Journey planning software (google maps) has been used to investigate likely commuter journey routes between the Coed Darcy development and various destinations in all directions. None of the journeys tested recommended a route that passed along Crymlyn Road. No further allowance for committed development traffic is therefore considered necessary.

Impact

5.6 The table below shows the total number of vehicle movements passing through each of the four junctions under consideration. Values are provided for the 2035 baseline condition (without development) and for the anticipated development generated flows. This allows for the percentage impact of the development traffic on each junction to be calculated. The assessment and the junction capacity assessments that follow are based on a previous iteration of the development proposal when up to 147 dwellings were included. The number of dwellings has since decreased to 139 and therefore the traffic generation of the development is slightly less than has been considered as part of this assessment. The assessment can therefore be taken as a robust, worst-case, consideration of the development's traffic impact.

Junction	am Peak Hour			pm Peak Hour		
	2035 Baseline	Development Traffic	% Impact	2035 Baseline	Development Traffic	% Impact
Crymlyn Gardens	255	40	16%	304	44	14%
Crymlyn Park	364	47	13%	275	33	12%
Serecold Avenue (W)	453	42	9%	475	54	11%
Serecold Ave (E)	481	53	11%	551	59	11%

Table 3 Development Traffic % Impact on Crymlyn Road Junctions

5.7 It is calculated that the development will increase am peak hour traffic moving through each of the junctions by between 9% and 16%. During the pm peak hour the increase is calculated to be between 11% and 14%.

5.8 Increases in traffic of greater than 5% are generally considered to be material, warranting more detail analysis of the operation of the junctions and what impact the development might have on their capacity.

Junction Capacity Assessment

5.9 To consider the development's impact in more detail on Crymlyn Road's junctions with Crymlyn Gardens, Crymlyn Parc and Serecold Avenue their operation has been modelled using the industry standard Junctions 10 / PICADY software.

5.10 A 'One Hour' flow profile method has been used in the modelling. This assumes a specific type of flow profile for traffic arriving at the junction throughout the hour. The flow profile assumes that a high peak in traffic demand occurs during the middle of the peak hour. This is a 'worst-case' assumption and ensures that the modelling is robust. The detailed PICADY output is included as Appendix 3 and summarised below.

5.11 The tables below show the maximum ratio of flow against capacity (RFC) experienced at the junction. A RFC of 1 would indicate that traffic demand is equal to the junction's capacity although junctions are considered to be operating poorly if the RFC exceeds 0.85. RFC figures under 0.85 indicate that the junction is operating with ample spare capacity.

Table 7 Crymlyn Road / Serecold Avenue (east) – Summary of Junction Performance

5.12 The analysis shows that the junctions operate with low RFC's and have ample spare capacity under all tested scenarios. The addition of the development generated traffic has no material impact on the operation of the junctions.

Impact on M4 Junction 43

5.13 In its response the previous PAC submission, Welsh Government requested an assessment of the development traffic's impact on the operation of Junction 43 of the M4.

5.14 It is estimated that some 80% of development traffic will turn to and from the east (Skewen direction). This equates to some 55 and 62 vehicle movements in the morning and afternoon peak hours, respectively. For the purpose of this assessment we will assume that half of this traffic (28 to 31 peak hour movements) will travel through junction 43 with the most direct route being via the B4290 that links to the western side of the M4 junction.

5.15 A Transport Assessment produced in support of a recent planning application (P2024/0036) for the development of a drive-thru coffee shop near junction 43 includes details of a 2024 traffic survey undertaken where the B4290 emerges near the junction. A figure from that document is reproduced below.

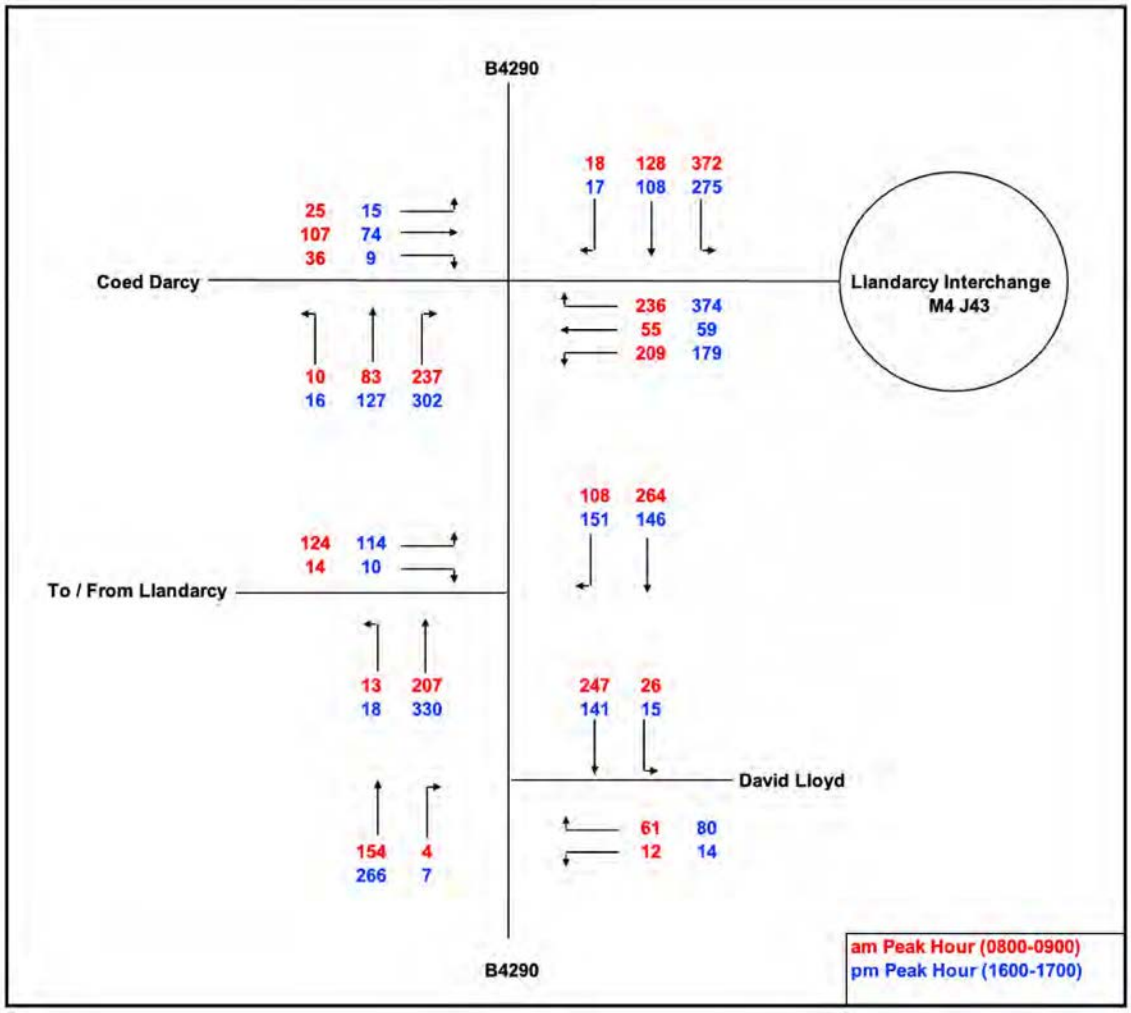

Figure 23 Llandarcy Interchange Survey From P2024/0036 Application

5.16 The survey recorded a total of 1217 vehicle movements on the western arm of the Llandarcy Interchange's western arm during the morning peak hour and 1263 during the afternoon peak hour.

5.17 If the development adds 28 and 31 additional traffic movements in the morning and afternoon peak hours, the impact on the western arm of the Llandarcy Interchange will equate to a 2% increase in each peak hour. This is not material and the impacts on the operation of the interchange will be imperceptible.

6 Summary & Conclusion

6.1 In summary this Transport Statement has demonstrated that:

- The site is in a sustainable and accessible location. The site is accessible to pedestrians, cyclists and public transport users. This increases the possibility that journeys generated by the development can be made by sustainable forms of transport.
- There is a good range of services and facilities that cater for the day-to-day needs of future residents of the site available within reach by sustainable methods of travel. This reduces the need to travel by car and ensures that future residents without access to cars are not socially excluded.
- The site benefits from a safe means of access.
- The proposal is for a development of up to 139 homes.
- The site will be served by an adoptable streets. Off-street parking is provided for each property and accords with the adopted Parking Standards. Visitor parking will be accommodated within the street.
- The estimated traffic generation of the proposed development is insignificant and will cause no detrimental impact to the continued safe operation of the surrounding highway network.

6.2 As such it is considered that the application site meets planning policy requirements in terms of being in an appropriate location that is safely accessible by all forms of transport and that the impacts of the development on the continued operation and safety of the surrounding highway network would be acceptable.

6.3 It is concluded therefore that there are no transport related issues that should prevent planning permission for the proposed development from being granted.

Appendix 2 Crymlyn Road Junction Surveys

SUMMARY	
Project	Skewen Neath
Project Code	SS2006
Site Name	Site 01
Legs and Movements	All Processed Legs & Movements
Count Interval	15
Start Time	00:00
End Time	23:45
Location	Site 01
Latitude and Longitude	(51.653795, -3.86616)

	START	END	PHF
AM PEAK			
PM PEAK			
Mid-Day PEAK			
Forced Peak AM			
Forced Peak PM			

Site: Site 01

GPS: 51.653795, -3.86616

Date: 09-11-2025

SUMMARY	
Project	Skewen Neath
Project Code	SS2006
Site Name	Site 01
Legs and Movements	All Processed Legs & Movements
Count Interval	15
Start Time	00:00
End Time	23:45
Location	Site 01
Latitude and Longitude	(51.653795, -3.86616)

	START	END	PHF
AM PEAK			
PM PEAK			
Mid-Day PEAK			
Forced Peak AM			
Forced Peak PM

SUMMARY	
Project	Skewen Neath
Project Code	SS2006
Site Name	Site 04
Legs and Movements	All Processed Legs & Movements
Count Interval	15
Start Time	00:00
End Time	23:45
Location	Site 04
Latitude and Longitude	(51.656435, -3.856365)

	START	END	PHF
AM PEAK			
PM PEAK			
Mid-Day PEAK			
Forced Peak AM			
Forced Peak PM			

Site: Site 04

GPS: 51.656435, -3.856365

Appendix 4 TRICS Trip Rate Data

Calculation Reference: AUDIT-648801-240913-0934

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : B - AFFORDABLE/LOCAL AUTHORITY HOUSES
TOTAL VEHICLES

Selected regions and areas:

03	SOUTH WEST		
	WL	WILTSHIRE	1 days
06	WEST MIDLANDS		
	WM	WEST MIDLANDS	1 days
07	YORKSHIRE & NORTH LINCOLNSHIRE		
	KS	KIRKLEES	1 days
08	NORTH WEST		
	AC	CHESHIRE WEST & CHESTER	1 days
09	NORTH		
	NB	NORTHUMBERLAND	1 days
11	SCOTLAND		
	DU	DUNDEE CITY	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
Actual Range: 54 to 97 (units:)
Range Selected by User: 50 to 516 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/10 to 13/05/22

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	3 days
Tuesday	2 days
Friday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	6 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	2
Edge of Town	4

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	6

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Inclusion of Servicing Vehicles Counts:

Servicing vehicles Included	X days - Selected
Servicing vehicles Excluded	6 days - Selected

Secondary Filtering selection:

Use Class:

C3	6 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order (England) 2020 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:
All Surveys Included

Secondary Filtering selection (Cont.):

Population within 1 mile:

5,001 to 10,000	2 days
10,001 to 15,000	1 days
15,001 to 20,000	3 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

25,001 to 50,000	1 days
75,001 to 100,000	1 days
125,001 to 250,000	3 days
250,001 to 500,000	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	4 days
1.1 to 1.5	2 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	6 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	6 days

This data displays the number of selected surveys with PTAL Ratings.

6 WM-03-B-01 SEMI DET./TERRACED WEST MIDLANDS
YORKMINSTER DRIVE
BIRMINGHAM
CHELMSLEY WOOD
Edge of Town
Residential Zone
Total No of Dwellings: 97
Survey date: MONDAY *17/10/11* *Survey Type: MANUAL*

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

TRIP RATE for Land Use 03 - RESIDENTIAL/B - AFFORDABLE/LOCAL AUTHORITY HOUSES

20:00 - 21:00									
21:00 - 22:00									
22:00 - 23:00									
23:00 - 24:00									
Total Rates:			2.229			2.225			4.454

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Any resulting copy must retain all copyrights and other proprietary notices, and any disclaimer contained thereon.

The Company accepts no responsibility for loss which may arise from reliance on data contained in the TRICS Database. [No warranty of any kind, express or implied, is made as to the data contained in the TRICS Database.]

Parameter summary

Trip rate parameter range selected:	54 - 97 (units:)
Survey date date range:	01/01/10 - 13/05/22
Number of weekdays (Monday-Friday):	6
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages. Network Residual Capacity indicates the amount by which network flow could be increased before a user-definable threshold (see Analysis Options) is met.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Demand Sets	D1 - 2025 | Existing | AM	Time results are shown for central hour only. (Model is run for a 90 minute period.)
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Junction Network

Junctions

Junction	Name	Junction type	Arm A Direction	Arm B Direction	Arm C Direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way	Two-way	Two-way		1.68	A

Junction Network

Driving side	Lighting	Network residual capacity (%)	First arm reaching threshold	Network delay (s)	Network LOS
Left	Normal/unknown	399	Stream B-AC	1.68	A

Arms

Arms

Arm	Name	Description	Arm type
A	Crymlyn Rd (West)		Major
B	Crymlyn Gardens		Minor
C	Crymlyn Rd (East)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right-turn storage	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Crymlyn Rd (East)	6.00			50.0	✓	1.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Crymlyn Gardens	One lane	2.75	50	50

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/min)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	8.425	0.092	0.233	0.146	0.332
B-C	10.650	0.098	0.248	-	-
C-B	10.049	0.234	0.234	-	-

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

ID	Year	Scenario	Time period	Description	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Results for central hour only	Run automatically

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages. Network Residual Capacity indicates the amount by which network flow could be increased before a user-definable threshold (see Analysis Options) is met.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Junction Network

Junctions

Junction	Name	Junction type	Arm A Direction	Arm B Direction	Arm C Direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way	Two-way	Two-way		3.14	A

Junction Network

Driving side	Lighting	Network residual capacity (%)	First arm reaching threshold	Network delay (s)	Network LOS
Left	Normal/unknown	269	Stream B-AC	3.14	A

Arms

Arms

Arm	Name	Description	Arm type
A	Crymlyn Rd (E)		Major
B	Crymlyn Parc		Minor
C	Crymlyn Rd (W)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right-turn storage	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Crymlyn Rd (W)	6.00			50.0	✓	1.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Crymlyn Parc	One lane	2.75	50	50

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/min)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	8.425	0.092	0.233	0.146	0.332
B-C	10.650	0.098	0.248	-	-
C-B	10.049	0.234	0.234	-	-

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages. Network Residual Capacity indicates the amount by which network flow could be increased before a user-definable threshold (see Analysis Options) is met.

File summary

File Description

Title	Crymlyn Gardens Junction
Location	
Site number	
Date	29/06/2021

Existing Layout - 2025 | Existing | AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Junction Network

Junctions

Junction	Name	Junction type	Arm A Direction	Arm B Direction	Arm C Direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way	Two-way	Two-way		1.71	A

Junction Network

Driving side	Lighting	Network residual capacity (%)	First arm reaching threshold	Network delay (s)	Network LOS
Left	Normal/unknown	252	Stream B-AC	1.71	A

Arms

Arms

Arm	Name	Description	Arm type
A	Crymlyn Rd (West)		Major
B	Serecold Avenue (West)		Minor
C	Crymlyn Rd (East)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right-turn storage	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Crymlyn Rd (East)	6.00			50.0	✓	1.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Serecold Avenue (West)	One lane	2.75	50	50

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/min)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	8.425	0.092	0.233	0.146	0.332
B-C	10.650	0.098	0.248	-	-
C-B	10.049	0.234	0.234	-	-

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages. Network Residual Capacity indicates the amount by which network flow could be increased before a user-definable threshold (see Analysis Options) is met.

File summary

Existing Layout - 2025 | Existing | AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Junction Network

Junctions

Junction	Name	Junction type	Arm A Direction	Arm B Direction	Arm C Direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way	Two-way	Two-way		0.58	A

Junction Network

Driving side	Lighting	Network residual capacity (%)	First arm reaching threshold	Network delay (s)	Network LOS
Left	Normal/unknown	514	Stream B-AC	0.58	A

Arms

Arms

Arm	Name	Description	Arm type
A	Crymlyn Rd (West)		Major
B	Serecold Avenue (East)		Minor
C	Crymlyn Rd (East)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right-turn storage	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Crymlyn Rd (East)	6.00			50.0	✓	1.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Serecold Avenue (East)	One lane	2.75	50	50

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/min)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	8.425	0.092	0.233	0.146	0.332
B-C	10.650	0.098	0.248	-	-
C-B	10.049	0.234	0.234	-	-

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Demand Sets	D6 - 2035 | + Development | PM	Time results are shown for central hour only. (Model is run for a 90 minute period.)
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Junction Network

Junctions

Junction	Name	Junction type	Arm A Direction	Arm B Direction	Arm C Direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way	Two-way	Two-way		1.43	A

Junction Network

Driving side	Lighting	Network residual capacity (%)	First arm reaching threshold	Network delay (s)	Network LOS
Left	Normal/unknown	186	Stream B-AC	1.43	A

Traffic Demand

Demand Set Details

ID	Year	Scenario	Time period	Description	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Results for central hour only	Run automatically
